Counsellor, Baron Lothar Wimmer.
Secretary, Count Max Attems.
Consul-General, Charles D. Seligmann.

Prior to the War the Austrian Empire, joined to the Kingdom of Hungary, was the largest Empire, next to Russia, on the continent of Europe, situated between 42°—51° N lat and 9° 30'—26° 30' E long. It embraced an area of 240,456 sq miles, and a population (1914) of nearly 53,000,000. At the conclusion of the Great War, the territories of Austria comprised an area of 32,175 square miles with a population (1923) of 6,534,481 (estimated Dec. 31, 1927, at 6,678,527). Before the armistice of Nov. 11, 1918, the Hungarians, Czechoslovaks, Poles, Jugoslavs and Rumanians had seceded from the "Dual Monarchy." The Emperor Karl "withdrew from the exercise of government" by proclamation (Nov. 11, 1918) and a Republic of "German Austria" was declared Nov. 12, 1918.

Under the *Treaty of St Germain* (Sept. 10, 1919) the political neighbours of Austria are Germany and Czechoslovakia on the N.; Italy and Yugoslavia on the S.; Switzerland on the W., and Hungary on the E.

Under the new Constitution (Nov. 1, 1920), Austria became a Republican Federation of eight Provinces:—

Province	Area (sq miles)	Population 1927
Lower Austria and Vienna..	7,560	3,350,082
Upper Austria	4,627	918,006
Carinthia	3,679	403,722
Styria	6,320	1,025,475
Salzburg	2,765	237,384
Tyrol	4,861	336,491
Vorarlberg	1,010	150,231
Burgenland (West Hungary)	1,533	300,234
Total	32,175	6,734,625

Under the Constitution the Bundesrat and Nationalrat were constituted; a government formed, and a President elected; Vienna was later formed into a separate Province. The elections resulted in a majority for the *Christian Socialists* over the *Social Democrats*, the *Pan-Germans* coming next in order. In June, 1922, the Ministry resigned in favour of a non-party Government, which gave way (May, 1922) to a Christian Socialist Pan-German Coalition Government under Doctor Seipel (a priest). Elections were held again in October, 1923, March, 1927, and November 1930, and a similar Government was returned on each occasion.

Complete religious liberty is one of the fundamental laws of the new Republic. The prevailing religion is Roman Catholic.

Defence.—During the War of 1914—18 about 5,000,000, all ranks, were passed into the common Army of Austria-Hungary. The total casualties exceeded 1,500,000, of whom over 700,000 were returned as killed. Under the *Treaty of St Germain* the military, naval and air forces were demobilised and reduced to minimum requirements and all warships were surrendered to the Allies, those under construction being broken up. Service in the Republican Army is by voluntary enlistment for twelve years.

Education.—Primary education is compulsory and free, the children in attendance at schools numbering about 720,000 in 1927. Secondary education is provided in gymnasia, and real-schools and there are universities at Vienna, Graz and Innsbruck.

Finance.—The finances of Austria went from bad to worse for four years after the Armistice, owing to heavy deficits and incessant inflation. The deficit on the State Budget was estimated in July, 1922, at considerably more than one billion crowns, and by Oct 1922, the exchange value of the crown had sunk to about one-fifteen-thousandth of its nominal value, £1 being equal to 325,000 crowns (in place of 24 22). The circulation on Sept 30, 1922, was over two billion crowns. In September and October, 1922, the League of Nations worked out a scheme for the restoration of the Austrian finances within two years under the control of a High Commissioner appointed by the League, the Governments of Great Britain, France, Italy, and Czechoslovakia agreeing to guarantee four-fifths of a loan of 520,000,000 gold crowns (about £25,000,000) in order to fill the deficit in the Budget during the two years. The guarantees for the remainder were given by other powers and a short term loan of £3,500,000 was issued in March, 1922. In the following June the big League of Nations loan was successfully floated, nearly one-half in London, about £5,000,000 in New York, and the rest in various continental capitals. The sum actually received amounted to over £26,500,000. About £11,000,000 was used to repay the previous short term loans made in 1922 and 1923. The High Commissioner, Dr. Zimmermann, appointed by the League of Nations to supervise the carrying out of then scheme for the reconstruction of Austria, entered on his office in Dec 1922. Great progress has been made since in reducing Government expenditure and increasing the revenue. Thus about 79,000 superfluous officials were dismissed or pensioned off by the end of December, 1924, and on the completion of the work of reconstruction Dr Zimmermann left Vienna in July,

1926. The issue of uncovered bank-notes was stopped on Nov. 18, 1925, and the Austrian crown was stabilised at about Crs 345,000 = £1. In 1925 a new currency was introduced, the unit being the Austrian *schilling* (=10,000 paper Crowns), the rate of exchange in Sept., 1931, being 34 *sch* = £1 sterling. Since the Armistice (Nov. 11, 1918), the British Government has advanced about £10,000,000 to the Republic. The favourable condition of the Austrian State lasted until 1929, but in 1930 there was a small deficit on working account and in 1931 measures were passed to reduce expenditure and increase revenue.

	1930	1931
Receipts	£43,500,000	£42,440,000
Current Expenditure	44,000,000	48,920,000
Working Surplus
Deficit	400,000	6,480,000
Capital Expenditure	7,200,000	2,800,000

Since 1930 Austria is being continuously affected by the general trade depression which causes an increase in the number of unemployed, a falling off in production and foreign trade, and a decline in the revenue. In May 1931 the leading bank, the Oesterreichische Credit Anstalt, got into difficulties and had to be supported by the Government. In order to relieve the strain on the Austrian National Bank, the Bank of England advanced £4,300,000 to the Austrian Government on June 16. In August 1931 the Austrian Government applied to the League of Nations to make an enquiry into its situation, and experts were sent, at the Conference of Lausanne (1932) the offer was made to facilitate the raising of a loan of not more than 300,000,000 *sch* for Austria, under certain conditions, to which the Austrian Government subsequently agreed.

	1930	1931
Total Imports	£79,283,000	£64,000,000
Total Exports	54,574,000	38,800,000
Imports from U. K.	2,708,000	2,180,000
Exports to U. K.	2,950,000	2,700,000

Communications—In Sept., 1923, there were about 4,140 miles of railway (exclusive of narrow gauge lines). The mercantile marine was considerable in 1914, but the new Republic is land-locked.

Industries—The principal industry is agriculture, the chief products being wheat, barley, oats, rye, maize, and potatoes. Forestry and stock raising are important. The forests are principally coniferous trees. The live-stock includes horses, cattle, sheep, pigs, and goats. The vine is extensively cultivated. The most important mineral production is that of iron ore, magnesite, and salt, there are also lead, zinc, copper, common and brown coal, and graphite. The principal manufactures are woollens, cottons, steel, wood-work, brewing, and machinery.

CAPITAL, Vienna, on the River Danube. Pop. (1931) 1,824,912, other large towns are Graz (152,706), Linz (102,081), and Innsbruck (56,401). **FLAG**: Three horizontal bands red, white, red.

A Kingdom of Western Europe, with a total

area of 12,750 square miles and a population,

Dec. 31, 1930 (including Eupen and

Malmédy) of 8,129,824. Belgium is bounded

on the N. by the Kingdom of the Nether-

lands, on the S. by France, on the E. by Ger-

many and Luxemburg, and on the W. by the

North Sea. The kingdom formed part of the

"Low Countries" (Netherlands) from 1815 until

Oct. 14, 1830, when a National Congress pro-

claimed its independence, and on June 4, 1831,

Prince Leopold of Coburg was chosen hereditary

king. The separation from the Netherlands

and the neutrality and inviolability of Belgium

were guaranteed by a Conference of the European

Powers, and by the Treaty of London (April 19,

1839), the famous "Scrap of Paper," signed by Austria, France, Great Britain, Prussia, The Netherlands, and Russia. On Aug. 2, 1914, the Germans invaded Belgium, in violation of the terms of the treaty, the main object of this act was to turn the French frontier defences and reach Paris before French resistance could be organized, but the Germans were foiled by the heroic defence of the forts at Liège, which gave the French and English armies time to establish contact and block the way to Paris. The invaders, however, ultimately over-ran nearly the whole of Belgium, and the Belgium army was entrenched during the remainder of the war period behind the river Yser. The Germans were ousted from the country shortly before the armistice of Nov. 11, 1918. About 20,000 persons were added in 1919 by the cession of Moresnet and part of Malmédy by Germany, and the district of Eupen, with the remainder of the district of Malmédy, were ceded by Germany and annexed by Belgium (Sept. 20, 1920) after a plebiscite, thus adding a further 50,000 to the inhabitants. In addition, the Grand Duchy of Luxembourg joined Belgium in an economic union when it ceased after the war to form part of the German *Zollverein*.

Belgium is inhabited by two distinct races, the Flemish, of Germanic stock, and the Walloons, of Latin stock. Flemish is spoken in the provinces of West Flanders, East Flanders, Antwerp, Limburg, and the northern half of Brabant, and French in the provinces of Hainaut, Namur, Luxembourg, Liège, and the southern half of Brabant. The town of Brussels is bilingual, and the upper classes everywhere speak French. The official languages are both Flemish and French, and also German in the districts acquired after the war. Nearly all the inhabitants are, at least nominally, Roman Catholics.

Belgium has a frontier of 832 miles, and a seaboard of 42 miles. The Meuse and its tributary the Sambre divide it into two distinct regions, that in the west being generally level and fertile, whilst the table-land of the Ardennes, in the east, has for the most part a poor soil. The "polders" near the coast, which are protected by dikes against floods, cover an area of 193 sq. miles. The highest hill, Baraque Michel, rises to a height of 2,230 feet, but the mean elevation of the whole country does not exceed 536 feet. The principal rivers are the Scheldt and the Meuse. Brussels has a mean temperature of 50° F. (summer 65°, winter 37°).

GOVERNMENT.—The constitution jointly vests the legislative power in the King, the Senate, and the Chamber of Representatives. The 124 senators (with the exception of 40 elected by the provincial councils and 20 elected by the senators themselves) and 127 representatives are elected by the people, the former for eight, the latter for four years. Universal male suffrage, with plural voting up to three votes by property and educational qualifications, was introduced by the Electoral Law of 1894, proportional representation being secured by an Act of 1900. In April, 1919, the Belgian Parliament decided as an emergency measure to hold 1919 elections on a "one man one vote" basis for Senate and Chamber. (Unmarried widows of soldiers killed before Jan. 1, 1919, or falling widows, the mothers; widows or mothers of civilians shot by enemy; women imprisoned by enemy for patriotic acts, also voted.) This Parliament, anomalous, and unconstitutionally elected,

was required to make constitutional the machinery by which it was elected; i.e., to revise article 47 of the Constitution. This was done (Feb. 7, 1921) and a new Chamber was elected in 1925. The present Chamber (elected in May, 1929), consists of 77 Catholics, 26 Liberals, 70 Socialists, 11 Frontists (extreme Flemish Nationalists), and 1 Communist. Deputies receive 42,000 francs a year and a free pass over the railways. There are in addition representative Provincial and Communal Councils, elected on a somewhat more liberal franchise.

PRODUCTION.—Agriculture and forestry are important industries, the chief crops being oats, rye, wheat, potatoes, barley and sugar-beet. Belgium is essentially a manufacturing country, and it is largely dependent upon foreign supplies for its food. The mineral kingdom yields coal, iron, zinc, lead, and copper. The leading industries are collieries, quarries, and metallurgic (Mons, Charleroi, Liège, Namur, Hainaut, Brabant, and Limbourg), glass, textiles (Ghent and Verviers), lace (Brussels, Mechlin, Bruges, &c.), flour and starch mills, sugar, distilleries, breweries, &c.

DEFENCE.—In 1928 a new Recruiting Law was passed, entailing compulsory service for an average of 22 months, including rappels. The annual contingent is fixed at 44,000, and the Army consists of a Field Army of 3 Corps, each of 2 Divisions, and 1 Cavalry Corps of 2 Divisions.

EDUCATION.—Schools are maintained by communal taxation, with provincial and State grants, while many are under ecclesiastical control, Roman Catholic largely predominating. There are 134 State high schools, including 44 for girls, and numerous private institutions. Special schools abound. The Universities of Ghent and Liège are maintained by the State, those of Brussels and Louvain are free institutions. After considerable opposition, Ghent University, which had in the past given its teaching and transacted its business in French, was in 1930 turned into a purely Flemish institution. It had already been made bilingual in 1913.

Revenue (1931)	Francs 10,321,447,655
Expenditure (1931)	12,614,533,806
Debt (Dec. 31, 1931):—	
Internal consolidated	26,283,772,555
External	25,630,283,947
Total	51,914,056,502
Internal floating	1,048,043,000

Total	52,962,099,502
Imports (1931)	Francs 23,964,359,000
Exports (1931)	23,235,797,000
Imports from U.K. (1931) ...	1,957,552,000
Exports to U.K. (1931)	4,914,992,000

The imports in 1931 were: manufactured articles (7,095,781,000 francs), raw materials (20,858,148,000), foodstuffs and beverages (5,570,625,000), and live animals (217,390,000); the exports were: raw materials (7,867,870,000 francs), manufactured articles (13,009,596,000), and foodstuffs and beverages (2,015,205,000) and live animals (213,808,000).

COMMUNICATIONS.—In 1931 there were 5,127 kilometres of normal gauge railways, 4,823 of which were operated by the National Railway Company; the length of light railways (narrow gauge) at the end of 1931 was 5,188 kilometres,

* Including Debts to Foreign Governments.

4,632 kilometres (of which 1,000 are electrified) being in operation. In 1930 there were 9,600 kilometres of telegraph line, with 48,000 kilometres of telegraph wire. The navigable rivers and canals have a length of 1,992 kilometres (1932), and there are 10,309 kilometres of State and provincial roads. Most of the maritime trade of Belgium is carried on in foreign bottoms, the mercantile marine consisting (1932) of 162 vessels (599,747 tons), in addition to which there were (1930) 552 fishing boats. In 1932, 17,535 vessels entered at Belgian ports (tonnage 27,793,142). The principal port and commercial entrepôt is Antwerp, on the River Scheldt. Other ports are Ostend, Ghent, Bruges, Nieuport, Blankenburg and Zeebrugge. The vexed question of the navigation of the Scheldt, the mouth of which is entirely in Netherlands territory, has lately been the subject of negotiations between the Belgian and the Netherlands Governments, which have not yet (Nov. 1932) reached a conclusion.

The Capital, BRUSSELS, had a population (Dec. 31, 1930) of 885,924 (with suburbs). Other towns with over 200,000 inhabitants are Antwerp, the chief port (452,334); Ghent (208,539), which has large cotton and flax spinning mills, and is the second port of importance after Antwerp, while its flower shows are famous; and Liège (169,566) the centre of the iron industry. Brussels is 224 miles from London; transit, 3 hrs.

THE BELGIAN CONGO.

Governor-General, His Excellency Lieutenant-

General Auguste Constant Tilkens.

The Independent State of the Congo, founded in

1885, became a Belgian Colony on Nov. 15, 1908.

Situated between long. 12°-31° E. and lat. 5° N.-13° S. the colony comprises an area of 909,654 sq. miles, with a native population (1930) of 9,544,938. The European population (Jan., 1932) was 22,428, of whom 15,034 were Belgians, 1,493 Portuguese, 1,473 Italians, 935 British, 668 Greeks, 575 Americans, 554 French, 348 Dutch, 202 Swiss, and 1,210 others of various nationalities.

The Congo River is navigable for large vessels from its mouth at Banana to Matadi (55 miles), where the European steamers discharge and recharge their cargo; but between that place and Leopoldville, on Stanley Pool, there occur rapids and falls which have been avoided by a railroad 249 miles in length. A narrow-gauge line runs from Boma to Tchela in the Mayumbe (86 miles). Above Leopoldville the river and its numerous affluents are navigable by steamer for about 7,000 miles, the falls on the Upper River being avoided by a metre-gauge line from Stanleyville to Ponthierville (78 miles), and another from Kindu to Kongolo (325 kilometres). Another line from Kibalo to Albertville on Lake Tanganyika (170 miles) connects the West Coast of Africa with British East Africa and the East Coast. The Katanga-Bukama Railway (446 miles) links up the Rhodesian Railway system with the steamers plying on the Upper Congo River, connecting with both the East and the West Coast. The Bukama-Port-Franqui Railway (702 miles) commenced in 1923 and opened in 1928 makes it possible to travel by train direct from Cape Town to the river Kasai, a distance of 3,400 miles. This new route plays an important part in the export of copper from the Katanga mines, its possibilities being limited only by the capacity of the Port of Matadi. Other railways are Kindu-Kongolo (223 miles), Aketi-Bondo (55 miles), Charlesville-Makumbi (56 miles) and Manono-Mayumba (32 miles), making a total for the Colony of 2,122 miles. A new line has been completed from Katanga to join the recently completed Benguela Railway in Portuguese Angola, and work has been started on a line from Stanleyville to Lake Albert which will provide the last link to direct river and rail communication between the Cape and Cairo. Regular air services are established from Boma to Leopoldville, Luebo and Elisabethville, from Luebo to Kabalo and from Leopoldville to Coquilhatville. Motor roads total over 6,200 miles. The most important motor road is the *Route Royale Congo-Nil* (563 miles) from Djamba, on the Rubi, to Redjaf, on the Nile. Another runs from Bukama (*via* Kanda-Kanda and Luebo) to Djoko-Punda, on the Kasai (623 miles). A complete system of telegraphic communication has been established throughout the Colony and is connected with the international system. The West Coast District has rather scanty rain (40 inches), but on the Mayumbe Hills and in the whole interior the rainfall averages between 60 and 80 inches, and the country is very fertile and productive. Sleeping sickness, once very prevalent and destructive, is now decreasing. Extensive forests cover the central districts; oil palms are plentiful everywhere, and supply an ever-increasing trade in palm-oil and palm-kernels. Cotton, cocoa, rubber and coffee are successfully planted. The Colony is rich in minerals. Extensive radium deposits exist in the Katanga, where there are enormous deposits of copper, but the smelters have been practically at a standstill since 1932. Bukama is the centre

of an extensive tin-belt, and alluvial and reef gold are found in the North-eastern Congo. Diamond-bearing gravels are worked in the south. The chief exports are palm-kernels and palm-oil, cotton, cocoa, gum-copal, rubber, ivory, copper, gold, tin, radium, and diamonds. Capital, Leopoldville (pop 2,431 whites). Principal towns, Boma (pop 377 whites), Elisabethville (Katanga) (pop 2,624 whites), Stanleyville, Eastern Province (610 whites), Coquilhatville (517 whites).

Ruanda and Urundi (ceded July, 1919) formed the N.W. corner of German East Africa from 5° S. lat. to the S borders of (British) Uganda and have an area of about 25,000 square miles, with an estimated population of 3,000,000. They lie W of the Victoria Nyanza and N.E. of Lake Tanganyika, through which are their respective outlets. The soil is poor, and the only exports are live-stock and hides. The administrative capitals are Nianza (Ruanda) and Kitega (Urundi), the commercial capitals being Kigali (Ruanda) and Usumbura (Urundi).

Attaché, Pastor Llobet.

Consul-General, Señor Don Mamerto Urriolagoitia, 16 Grosvenor Place, W. 1

The Republic of Bolivia extends between lat 8° and 23° S. and long. 59° 30' and 73° W., and its area is officially estimated at 594,460 square miles (other estimates giving an area of 708,195 square miles), with an estimated population of 2,921,283. The Republic derives its name from its liberator, Simon Bolivar (born 1783, died 1830).

The chief topographical feature is the great central plateau (6,500 square miles) over 500 miles in length, at an average altitude of 12,000 feet above sea level, between the two great chains of the Andes, which traverse the country from south to north, and contain, in Illimpu (Sorata), and Illimani, two of the

highest peaks of the western hemisphere. The total length of the navigable streams is about 12,000 miles, the principal rivers being the Itenes, Beni, Mamoré, and Madre de Dios.

Mining and agriculture are the principal industries, the mineral productions being very valuable. The ancient silver mines of Potosí are now worked only for tin, but gold, partly dug and partly washed, is obtained on the Eastern Cordillera of the Andes; the tin output is, after that of the Straits Settlements, the largest in the world, while copper, antimony, wolfram, bismuth, salt, and sulphur are also found. Its agricultural produce consists chiefly of rice, barley, oats, maize, cotton, coca, indigo, Indian rubber, cacao, potatoes, cinchona bark, medicinal herbs, &c. Manufactures are in a very undeveloped state. The principal exports are tin and silver ores, crude rubber, copper ores, bismuth, lead ores, wolfram, wool, coca, hides, and antimony; the chief imports are iron and steel products, textiles, machinery, sugar, flour, and coal. There are (1929) 1,314 miles of railways in operation, and the construction of a line from Cochabamba to Santa Cruz, in two sections of 115 and 110 miles respectively is in the preliminary stages. There are 4,000 miles of telegraph wire, and wireless services between Riberalta, La Paz, Cobija, Capitan (Chaco). There is direct railway communication to the sea at Antofagasta (2 days), Arica (1 day), and Mollendo (2 days), and also to Buenos Aires (3½ days); branch lines run from Oruro to Cochabamba, and from Rio Mulato to Potosí. Construction on the railway between La Quaca (on the Argentine frontier) and Atocha (in Bolivia) is now completed. There is through railway communication with Buenos Aires from La Paz. Communication with Peru is effected by rail to Guaquí and thence by steamer across Lake Titicaca to the railroad at Puno. The principal line is the Antofagasta and Bolivia railroad (719 miles), and a line from La Paz to the province of Yungas (the first section of which is open) may eventually connect with the steamers on the rivers Beni, Mamoré, and other tributaries. A line from Potosí to Sucre, the legal capital, is under construction, and trains run to Betanzos.

Bolivia is without a sea-coast, having been deprived of the ports of Tacopilla, Cobija, Mojlones, and Antofagasta by the "Pacific War" of 1879-1882 (see Chile). The Peace Army amounts to about 5,000, all ranks, the War Effective being about 105,000.

Brazil, the most extensive State of South America, discovered in 1500 by Pedro Alvarez Cabral, Portuguese navigator, is bounded on the north by the Atlantic Ocean, the Guianas, Colombia and Venezuela; on the west by Peru, Bolivia, Paraguay, and Argentina; on the south by Uruguay; and on the east by the Atlantic Ocean; and extends between lat. 5° 10' N and 33° 45' S and long. 34° 45' and 73° 59' 22" W., being 2,327 miles from north to south, and 2,321 from west to east; with a coast-line on the Atlantic of 3,577 miles. The Republic comprises an area of 3,208,870 square miles, with a population (Census 1920) of 30,635,605, estimated at 39,102,856 in 1928.

The northern States of Amazonas and Pará are mainly wide, low-lying, forest-clad plains. The central state of the Matto Grosso is principally plateau land and the eastern and southern States are traversed by successive mountain ranges interspersed with fertile valleys. In the extreme south, towards the interior, the land rises by gentle gradations to the height of 2,000 to 5,000 feet above sea level. The principal ranges are *Serra do Mar* in São Paulo; the *Serra Geral* (Capão 9,323 feet) between Minas Geraes and Espírito Santo, the *Serra do Mantiqueira* (Itatiaia, 9,163 feet), and the *Serra do Espinhaço* (Itacolomi, 5,748 feet), in the south-east of Minas Geraes; the *Serra do Paranã*, between Goyaz and Minas Geraes, the *Serra dos Aymores*, which divide Espírito Santo from Minas Geraes; and the *Serra da Garçua*, *Branca* and *Araripe*, which envelop Piauí.

Brazil is unequalled for its rivers. The *River Amazon* has tributaries which are themselves great rivers, and flows from the Peruvian Andes to the Atlantic, with a total length of some 4,000 miles. Its principal northern tributaries are the *Napó* and *Marañon*, the *Putumayo* or *Ica*, *Rio Branco*, *Rio Negro*, and *Japurá*, its southern tributaries are the *Juruá*, *Purus*, *Madeira* and *Tapajós*, while the *Xingu* meets it within 200 miles of its outflow into the Atlantic. The *Tocantins* and *Ariguanã* flow northwards from the Plateau of Matto Grosso and the mountains of Goyaz to the Gulf of Pará. The *Parnahyba* flows from the encircling mountains of Piauí into the Atlantic. The *São Francisco* rises in the South of Minas Geraes and traverses Bahia on its way to the Eastern coast, between Alagoas and Sergipe. The *Paraguay*, rising in the south-west of Matto Grosso, forms a boundary with Bolivia on its way through Paraguay to its confluence with the *Paraná*, which rises in the mountains of that name and divides Brazil from Paraguay. On the Iguassú, which unites with the Upper Paraná at the Brazil-Argentine-Paraguay boundary, are the majestic *Falls of the Iguassú*, and on the São Francisco are the no less famous falls of *Povo Affonso*.

GOVERNMENT—Brazil was colonised by Portugal in the early part of the sixteenth century, and in 1822 became an independent empire under Dom Pedro, son of the refugee King João VI. of Portugal, the centenary of Brazilian independence being celebrated by an International Exhibition at the capital (Sept. 7, 1922, to July 2, 1923). On Nov. 15, 1889, Dom Pedro II, second of the line, was dethroned and a republic was proclaimed. The constitution rests on the fundamental law of Feb. 24, 1891, which established a federal republic under the name of *Estados Unidos do Brasil*. The President and Vice-President are elected for 4 years by the direct votes of all male Brazilians over 21 years who can read and write; they are ineligible for the succeeding term. They are aided, as an executive, by a Council of Ministers, who are responsible to the President and not to the legislature. Congress consists of a Senate of 63 members and of a Chamber of Deputies of 212 members; members of both houses are paid. The language of the country is Portuguese, foreign languages being read and spoken in the following order—French, Italian, English, German and Spanish.

PRODUCTION—The minerals are very considerable and valuable, comprising gold, silver, iron, diamonds, topazes, and other precious stones. The immense iron deposits have been scarcely touched. Manganese is exported, and there are important deposits of monozite and low-grade coal deposits are in the south. Its agricultural produce is abundant and its forests are immense. Cattle-raising is an important industry, the number being 34,270,324 (Census of 1920). The chief products of the country are coffee, maize, sugar, raw cotton, hides and skins, cocoa, oleaginous fruits, *hevea-maté*, rubber and tobacco: the rubber comes from the more northern provinces, especially the valley of the Amazon, and is shipped from Pará and Manaus; coffee coming chiefly from São Paulo. Tobacco and cocoa are grown largely, especially in Bahia. Cotton is being largely cultivated. Sugar-cane is grown in large and increasing quantities in the northern provinces, Pernambuco being the centre of the sugar-producing zone. The exports include also meat,

hides, maize, beans, and *hera-maté* (tea). The principal imports are machinery, wheat, iron and steel products, cotton goods, and coal and coke.

Foreign trade of Brazil, 1930:—

Imports from:	Exports to:
U.S.A. £12,968,468	U.S.A. £16,983,571

Portugal 2,047,293	Belgium .. 2,088,559

DEFENCE.—The peace effective of the Army is about 54,910 all ranks. The Navy consists of 2 Dreadnoughts, 1 battleship, 11 destroyers, 1 tender, 4 submarines, and some small vessels and aircraft.

EDUCATION.—Primary education is carried out by private initiative and at the cost of municipalities and States, in some cases with a Federal subsidy; there were 1,783,571 pupils in 1928. Secondary and Technical education is carried out by Federal, State and Municipal authorities, with 2,440 pupils in Federal schools, 7,975 in State and Municipal institutions, 42,061 in private schools, and 24,688 in technical institutes in 1928. Higher education (11,661 students in 1928) is carried out by Federal and State governments at the State University of Rio de Janeiro, and at the University colleges at Manaus (Amazonas) and Curitiba (Paraná) and other private colleges.

COMMUNICATIONS.—In January, 1930, there were 19,840 miles of railway open. Length of telegraph lines, about 75,000 miles. In 1928 steam and sailing vessels of 44,154,937 tons (of which 8,790,384 were under the British flag) entered Brazilian ports, the principal harbours being Manaus, Pará, Maranhão, Pernambuco, Maceio, Bahia, Victoria, Rio de Janeiro, Santos, and Rio Grande.

The Kingdom of Bulgaria is bounded on the north by Rumania, on the west by Yugo-Slavia and Greece, on the east by the Black Sea, and on the south by Greece. The total area is stated at 39,844 square miles, with a population (Dec 31, 1930) of 5,944,000. The prevailing religion of the Bulgarians is the Eastern Orthodox Church. For secular purposes, the Gregorian (Western) Calendar is in use.

A Principality of Bulgaria was created by the *Treaty of Berlin* (July 13, 1878) and in 1885 Eastern Roumelia was added to the newly-created principality. In 1908 the country was declared to be an independent kingdom, the area at that date being 37,202 square miles, with a population of 4,337,500. In 1912-13 a successful war of the *Balkan League* against Turkey increased the size of the kingdom, but in August, 1913, a short campaign against the remaining members of the League reduced the acquired area, and led to the surrender of about 2,000 square miles to Rumania. On Oct. 12, 1915, Bulgaria entered the War on the side of the Central Powers by declaring war on Serbia. She thus became involved in the defeats of 1918, and on Sept. 29, 1918, made an unconditional surrender to the Allied Powers. On Nov. 29, 1919, she signed the *Treaty of Neuilly*, which ceded to the Allies her Thracian territories (later handed over to Greece) and some territory on the western frontier to Yugoslavia.

GOVERNMENT.—The executive power is vested in the Tsar, and is exercised by a Council of Ministers, appointed by him. The legislature is a single chamber National Assembly or *Sobranie* of representatives (1 per 20,000 inhabitants), elected for a maximum term of four years by adult manhood suffrage. Members receive 12,000 *leva* a month and free railway travel.

PRODUCTION.—About 80 per cent of the population is agricultural, farming and small holdings, the principal crops being wheat, rye, barley, oats, maize, beans, tobacco, oleaginous seeds and sugar beet. The rearing of the silkworm is an important industry. The live-stock includes sheep, goats, cattle, pigs, horses, asses and mules. Rich and extensive brown and black coal deposits produce about 1,500,000 tons yearly for home needs, mainly from the State mine at Pernik. Certain areas are well mineralised with copper, lead, zinc, iron, manganese, etc., and also rock salt and bituminous shales. There is a variety of thermal and mineral springs, several of which have been modernised. The only minerals worked on a commercial scale are copper and lead. Local industry, encouraged by tariff protection and other inducements, is rapidly expanding, and cotton and woollen textiles, chemicals, leathers, timber, oils, soaps and metal articles are being produced. The exports consist chiefly of cereals, oil seeds and cake, leaf tobacco and cigarettes, eggs, poultry, dairy produce, live-stock, flour, starch of roses, silk cocoons, minerals, nuts and skins. Imports include raw materials for textile and other industries, cotton and woollen piece goods, metals, agricultural and industrial machinery and appliances, motor cars, rolling stock, chemicals, tanning materials, leathers, mineral and vegetable oils, paper, timber,

earthen and glass ware, colonial goods and food products.

DEFENCE.—Before the War of 1914-1918 service in the Army was universal and compulsory, and on a peace footing it numbered about 58,000, all ranks. During the War (Oct. 1915-Sept. 1918) about 500,000 passed into the ranks of the Army. By the *Treaty of Neuilly* the Bulgarian Army is limited to 20,000 all ranks.

EDUCATION is free and compulsory and the proportion of attendances is good; the number of illiterates in Bulgaria is comparatively small. There are several technical schools. Sofia has an Agricultural College and a Universities.

COMMUNICATIONS.—On Dec. 31, 1930, there were 15,015 miles of roads of which 10,090 miles were open, 4,055 miles under construction, and 868 miles traced. Of roads in actual use 4,718 miles were State and 4,716 miles Communal. There were 1,507 miles of normal and 295 miles of narrow gauge railway open in 1929. In 1930 there were 578 post and telegraph offices, 551 telephone exchanges with 17,225 subscribers (7,901 in Sofia). The principal Black Sea ports are Varna and Bourgas; and Rustchuk, Svislov, Vidlin and Lom on the Danube. In 1930 the vessels engaged in foreign trade cleared at Black Sea ports numbered 788 (1,381,440 tons).

A State of South America, of Spanish origin, lying between the Andes and the shores of the South Pacific, extending coastwise from the Rio Sama to Cape Horn south, between lat. 17° 15' and 55° 59' S., and long. 66° 30' and 75° 48' W. Extreme length of coast-line about 2,600 miles. Its extreme length is about 2,800 miles, with an average breadth, north of 45°, of 100 miles. The great chain of the Andes runs along its eastern limit, with a general elevation of 5,000 to 15,000 feet above the level of the sea, but numerous summits attain a great height—the highest being, in Aconcagua Provincia, 7,019 metres (23,025 feet) with many others over 20,000 feet. The chain, however, lowers considerably towards its southern extremity. The Andes form a boundary with Argentina, and at the head of a trail leading from Chile to Argentina has been erected a statue of *Christ the Redeemer*, 26 feet high, made of bronze from old cannon, to commemorate the peaceful settlement of a boundary dispute in 1902. There are no rivers of great size, and none of them are of much service as navigable highways. In the north the country is arid. Chile is divided into 16 provinces and 2 territories (Aysen and Magallanes) and the aggregate area is estimated at 289,798 square miles. In 1929 Chile signed a treaty ceding the province of Tacna to Peru but retained the province of Arica in return for a payment to Peru of £1,200,000.

The population (Census of 1930) was 4,287,445. Included in the population are four distinct racial divisions; (a) the Spanish settlers and their descendants; (b) the indigenous Araucanian Indians, Fuegians, and Changos; (c) mixed Spanish-Indians; and (d) European immigrants, who were represented in 1920 by 25,962 Spaniards, 12,360 Italians, 7,200 British and Irish, 8,950 Germans, 7,300 French and 5,000 Syrians. In 1929, the births numbered 176,030 (40.1 per 1000), marriages, 42,004 (9.6 per 1000); and deaths, 110,006 (25.1 per 1000).

GOVERNMENT.—Chile was discovered by Spanish adventurers in the 16th century, and remained under Spanish rule until 1810, when a revolutionary war, culminating in the *Battle of Maipo* (April 5, 1818), achieved the independence of the nation. The present constitution was voted by an overwhelming majority at the plebiscite held on Aug. 30, 1925, and superseded that of May 25, 1833. It was drafted by a Committee appointed *ad hoc* by President Alessandri. In accordance with the new Con-

stitution, the President is to be elected by direct vote of all Chilean citizens who have the right to vote. The National Congress consists of a Senate of 45 members, and of a Chamber of a number of Deputies to be fixed by a new electoral law in 1925. There is universal suffrage for persons who have attained the age of 21, can read and write, and are on the electoral roll.

PRODUCTION, &c.—Agriculture and mining are the principal occupations. Wheat, maize, barley, oats, beans, peas, lentils, wines, tobacco, hemp, Chile pepper, potatoes, onions and melons are grown extensively; the vine and all European fruit-trees flourish; the exportation of fruit to the United States is increasing yearly. Excellent wines are produced, and the Government is taking steps to develop their exportation. The live stock includes (1930) 2,387,940 cattle, 6,263,482 sheep, 788,831 goats, and 331,156 swine. The mineral wealth is considerable, the country being extremely rich in copper-ore, iron-ore and manganese ore. The production of bar copper in 1931 was 215,696 tons, Chile being the second greatest copper producing country in the world. The rainless north yields more especially nitrate of soda, iodine, borate of soda, copper, gold and silver, a large number of mines yielding both being in actual work in Tarapacá, Guanaco, and Cachinal in Atacama, and Caracoles in Antofagasta; the centre, copper, iron, manganese and silver; and the south, iron and coal (1,107,266 tons of coal were mined in 1931). In 1931 the production of nitrate was 1,125,921 tons, the exports of this fertilizer being in the same period 1,454,600 tons. Early in 1930 a law was passed constituting a national nitrate company, to be called *Compania de Salitre de Chile (Covach)*, with a capital of £75,000,000 with State participation, to take over the whole of the nitrate industry, the export tax being abolished, and its place in the budget taken by a fixed payment to the Government during the first three years, and after that by the Government's share in the company's profits. There are smelting-works for copper and silver, tanneries, corn and saw-mills, starch, soap, biscuit, rope, glassware, paints, mineral waters, boot and shoe, hosiery, hat, cloth, cheese, furniture, candle, match, brush, cordage and paper factories, breweries and distilleries, and the domestic industry furnishes cloth, embroideries, baskets, and pottery. The many ports favour commerce, and 13 lines of steamers connect the country with Panama and the Magellan Strait direct with Europe, a passage to Liverpool occupying from 30 days. The staple articles of export are nitrate of soda, iodine, oats, borax, frozen meat, wheat, copper bars and ores, silver ores, corn, flour, hides, wool, barley, honey and beans. The imports include silks, woollens and other textiles, food, and agricultural and mining machinery, and motor vehicles.

COMMUNICATIONS.—There were (1931) 5,542 miles of railway, of which 1,755 miles are British controlled. In 1931 there were 19,825 miles of telegraph, 910 post-offices, and 5,250 miles of telephone, with 13 public wireless stations. The mercantile marine (1931) numbers 128 vessels (180,745 tons). In 1931 663 vessels (2,002,821 tons) entered Chilean ports from abroad, and 14,637 coasting vessels (21,872,861 tons); legislation was passed in February, 1922, reserving the coasting traffic to vessels of the Chilean mercantile marine.

DEFENCE—All able-bodied male citizens from 16th to 45th year must serve in the army for a training period. The peace effective of the active army is 19,000. The Air Force has a peace strength of 136 machines with 150 pilots and 1,000 mechanics. The navy consists of 1 battleship (recently renovated), 1 ironclad, 3 cruisers, 11 destroyers and 9 submarines, with a complement of 6,000 officers and 8,000 other ranks.

EDUCATION is free, and in July, 1930, elementary education was made compulsory, there are 4,232 schools, attended by 479,761 children out of a total on the registers of 662,706. There are 3 Universities (2 in Santiago and 1 in Concepción.) The National Library contains about 300,000 volumes. The language of the country is Spanish and the religion is Roman Catholic.

	1930.	1931

Valparaiso is distant 9,000 miles via Panama, and 11,000 via the Strait; transit 34 to 39 days. Via Buenos Aires and Andes, transit 19 to 25 days.

CHINA.

(Chung-Hua Min-Kuo.)

President, Lin Shen, assumed office Dec. 27, 1931.

NATIONAL GOVERNMENT—KUO MIN CHENG-FU.

The National Government Council consists of National Government Councillors, among whom are the Presidents and Vice Presidents of the five Yuan (Councils). The President is *ipso facto* Chairman of the National Government Council.

President, Executive Yuan, Wang Ching-Wei.
Do, Legislative Yuan, Shao Yuan-Tsung (acting).
Do, Judicial Yuan, Chen Cheng (acting).
Do, Examination Yuan, Tai Chi-Tao.
Do, Control Yuan, Yu Yu-Jen.

Executive Yuan—Cabinet.

(Kuo-Wa Hui.)

The Cabinet consists of the President and the Vice-President of the Executive Yuan and the following Ministers—

Vice-President, T. V. Soong.
Finance, T. V. Soong.
Interior, Wang Shao-Yung.
Foreign Affairs, Lo Wen-Kan.
War, General Ho Ying-Chin.
Navy, Admiral Chen Shao-Kwan.
Industry, Commerce and Labour, Chen Kung-Po.
Communication, Wang Shao-Yung (acting).
Railways, Ku Meng Lu.

Envoy Extraordinary and Minister Plenipotentiary in London, Quo Tai-chi, 49 Portland Place, W.1.
Counsellor, Wei-Cheng Chen.

1st Secretaries, Tennyson Tan; Ching-Lin Hsia.
2nd Secretary, Tsao-ming Chiu.
Attachés, Loh Ming-Sin, Yang-chen Tien.
Consul-General, London, Dr. Wei-Cheng Chen, 49 Portland Place, W.1.

AREA AND POPULATION.

Territory	Square miles	Population
China Proper	1,532,800	414,011,539
Tibet	463,320	6,500,000
Chinese Turkestan ..	550,580	2,491,000
Mongolia	1,360,000	4,000,000
Total	3,906,300	427,002,539

The estimated foreign population of China was as follows in 1930: British, 13,015; Japanese, 255,686; Russian, 65,761; American, 6,875; Portuguese, 2,320; German, 3,006; French, 8,575; the total being 361,940. Out of a total of 7,922 foreign firms in China, 725 were British, 1,121 Russian, 3,940 Japanese, 184 German, 377 American, and 220 French (in 1923).

Chinese civilisation is the oldest in the world, and its government, based upon that of the family, remained unchanged in its root idea until the revolution of 1911-12, by which the

autocracy of the Emperor and the power of the bureaucracy were merged into a Republican form of government. For more than 2,000 years the Emperor was the supreme head of the State legislating by edict in matters great and small. In the seventeenth century the *Ming Dynasty* was overcome by the *Manchus* from the north, who have now become almost entirely absorbed by the conquered race. The conditions and practices of the autocracy were preserved by the *Manchus*, but for many years the civil service had become the power in the Empire and the central authority was but loosely exercised over the provincial and district administration. Many reforms were initiated or promised in the last few years of the Imperial rule, and an executive body was actually created, while a legislature was promised. At the close of the year 1911 the party of the reform forced the Imperial dynasty to a "voluntary" abdication, and a Republic was proclaimed.

China became a Republic on Feb. 12, 1912, with a President and Vice-President and an Executive Ministry, and a Legislature of a Senate (*Tsan Yü Yuan*) of 264 members and a House of Representatives (*Chung Yü Yuan*) of 596 members. The government of the 18 provinces is entrusted to civil and military governors, the latter (*Tuchens*) ranking first and holding practically all the powers of government; under them each province is subdivided into circuits superintended by *Taoyuns* or intendents, and again into districts. All the territorial officials are appointed by the central Government, and the provincial governors, though free to act independently in many matters of local detail and finance, are responsible to the central Government at Peking in all important questions, and especially so in foreign affairs. The *Treaty of Khabta*, 1915, between China, Russia, and Outer Mongolia recognises the *Hutukhta Khan* as Ruler of Outer Mongolia, while China, as the Suzerain Power, appoints Residents at Urga and three other towns. *Mongolia* has since developed into an independent self-governing republic.

On Oct. 1, 1930, *Weihaiwei*, the island of *Liu Kun* and certain other islands, leased to Great Britain in 1898, were restored to China. The area comprised in the lease was about 285 square miles, with a population of about 170,000. On Jan. 15, 1931, the Belgian concession at Tientsin was also formally restored to China.

The revolution of 1911 brought out a victorious general in the person of Yuan Shih-kai, but from his death in 1916 until June 1928 his subordinates and their successors fought for supreme power. Presidential elections were held and their results disputed, and the Parliament elected in 1913 held occasional meetings in 1924, but its measures were not carried into effect. The Emperor (who had lived in the Imperial Palace since his enforced abdication) was stripped of his title and driven out of the Capital in 1924, and such government as existed in 1927 was centred in Peking (for Northern China), while the Kuomintang (People's National Party) was represented by a Nationalist Government at Canton (for Southern China). In June 1928 Peking was captured by the Nationalists, and the capital of the country was transferred to Nanking, and on October 30, 1928 (the anniversary of the outbreak of the Revolution at Wuchang in 1911), Chiang Kai-shek, the com-

mander-in-chief of the victorious Nationalist armies, was installed as President of the Republic. The constitution promulgated in 1928 provides for government by five Councils (*Yuan*) Executive, Legislative, Judicial, Examination and Control.

EDUCATION.—In 1924 there were 190,000 schools in operation, with 6,500,000 pupils. There is a University in Peking. In 1928 there were upwards of 1,250 Chinese newspapers and magazines, published at regular periods, in Peking, Shanghai, Tientsin, and the other large centres, in addition to English and other Foreign daily newspapers.

COMMERCE.—The net trade of the open ports is stated as follows in *Hankwan Taels*.

Year.	Imports.	Exports.	Total.
1914	569,241,382	356,226,629	925,468,011
1927	1,072,932,000	918,620,000	1,991,552,000
1928	1,212,635,000	1,103,185,000	2,315,820,000
1929	1,265,778,821	1,055,667,218	2,321,446,039
1930	1,309,755,742	894,843,594	2,204,599,336
1931	1,427,576,380	887,450,938	2,315,027,318

The import of Indian opium is now prohibited.

External Trade, 1930 *Hankwan Taels.*

Country.	Imports from	Exports to.
Great Britain	123,953,000	64,035,000
India	84,209,000	19,294,000
Hong Kong	193,656,000	135,616,000
Malaya	9,537,000	15,532,000
France	22,559,000	34,068,000
Germany	86,940,000	25,890,000
Japan	296,809,000	239,496,000
U S R	3,190,000	3,329,000
U.S.A	321,342,000	123,400,000

COMMUNICATIONS.—Of the total area of China about half consists of table lands and mountainous districts where communication and travel are difficult and dangerous. In the remaining districts the principal means of communication from E. to W. is afforded by the rivers, and from N. to S. by the Great Canal. *Railways*—The length of the railways is less than 8,000 miles, inclusive of the Manchurian lines, or less than one-fifth (per 100 sq. miles) of those available in Turkey.

Shipping—The China Merchants Steam Navigation Co. have a fleet of 31 ships of an aggregate tonnage of 60,000. Besides this, there are a large number of small vessels engaged in the coasting trade and on the Yangtze. In 1930 the total tonnage of the 180,981 vessels and junks entered and cleared at Chinese ports was 155,605,954 tons. Of these ships 49,402 (57,246,927 tons) were British, 33,755 (45,639,705 tons) Japanese, and 6,638 (6,490,351 tons) U.S.A. In June, 1928, a vessel of 12,750 tons, constructed at the Kiangnan Dock and Engineering Works at Shanghai, was launched and supplied to the order of the United States Shipping Board.

Telegraphs are being rapidly constructed by the Central Government, and Peking is in communication overland with Europe and Tibet, the line being extended to Lhasa. There are about 53,000 miles of land lines and several high-power wireless installations. Telephones, Municipal and long distance, are in general use.

in the settled and trade areas, and wireless telephony has been installed in the large centres.

CUSTOMS AND POSTS.—The Chinese Maritime Customs is the controlling service; this body consists of nearly 1,000 Europeans, a large proportion of them British subjects, all under the control of the *Inspector-General* (F. W. Maze.) By an Imperial Decree of May, 1906, the Maritime Customs Dept. was transferred from the Foreign Board to the Board of Revenue, and two Chinese Administrators-General were appointed. But the change has not materially affected the powers hitherto exercised by the *Inspector-General*. In addition to the collection of dues at the Treaty Ports, this service manages the lighting and navigation thereof, and keeps a small fleet of cruisers to enforce its regulations. The Chinese Post Office, formerly a branch of the Customs, was transferred in 1911 to the Ministry of Communications, and a Foreign Co-Director General, with a considerable foreign staff, was appointed; letters can be sent all over the 18 provinces at a uniform rate of 3 cents for 20 grammes. The number of post offices (1929) was 12,265. In 1929, 725,000,000 postal packets and 7,000,000 parcels were handled.

BUDGET (1930-1931).

Revenue	<i>Taels</i> 500,000,000
Expenditure	640,000,000

Chinese Debt (Jan., 1930).

War Loans outstanding ..	£30,000,000
Boxer Indemnity do.	48,000,000
Railway Loans do.	40,000,000
General Loans do.	50,000,000
Japanese Loans do.	30,000,000
Short term Loans do.	17,000,000

£115,000,000

At Dec. 31, 1930, according to the official statement of the Ministry of Finance, the total external debt was 1,651,320,000 *taels* (including arrears of capital and interest). The internal debt was approximately 950,000,000 *taels*.

OUTLYING TERRITORIES.

Mongolia has an estimated area of about 1,360,000 square miles, and a population of 3,000,000 to 5,000,000, of whom the greater number are Buddhists. In 1915 Mongolia threw off its allegiance to China, and by the Treaty of Kiakhta was recognised as an Autonomous Republic. Negotiations with Russia, after the 1917 revolution, led to an alliance, and by Treaty (May 31, 1924) the U.S.S.R. acknowledge the suzerainty of China over Outer Mongolia.

North-West (or *Outer*) *Mongolia* covers an area of about 350,000 square miles, and consists of an elevated plateau bounded by the Russian Altai range (N.W.), the Sayans (N.E.), the Koutai (S.E.), and the Ekiagh Altai (S.W.). The plateau contains many lakes and is watered by numerous rivers, among which are the headwaters of the Yenisei, the Irtish and the Selenga. Agriculture is almost unknown, but excellent pasture provides grazing grounds for numerous cattle and sheep, and particularly for transport animals (camels and oxen). The exports are wool, hides and skins, and gold. The chief centres are Urga (Kuren, or Ulan-Bator-Khoto, "Town of the Red Knight"), Uliassutai, and Kobdo, all of importance as trading centres on the main caravan routes. Part of Outer Mongolia has declared itself independent of its suzerain as

the Republic of *Tannu Tura*. The districts affected lie between the Sayan and Tannu Olan ranges, the capital of the Republic being Chem Belder (or Krasny, "Red Town").

Inner Mongolia covers an area of about 1,000,000 square miles and includes the Gobi ("Desert"), or *Sha-mo* ("Sand Desert"), which covers nearly one-third of the total area, and in the extreme south-east the *Ordos* Desert, bounded on the south by the Great Wall of China, and encircled on the north by part of the main stream of the Hwang-ho river. In the north-east of Inner Mongolia rises the Keru-lun, which flows into the Dalai Nor in Manchuria. Agriculture is carried on wherever Chinese influence has been exerted, but is mainly confined to the south-eastern borders. The principal industry (as in North-West Mongolia) is sheep and cattle raising and the breeding of camels, oxen and horses for transport, in order to supply the caravan routes from China to Siberia. The centres of population depend mainly upon the overland commerce of China and Eastern Russia across the Gobi, the general direction of the caravan routes being from south-east to north-west. The principal centres are: Kalgan, Kuku-khoto, Kuku-erghi, Dolou-Nor and Biru-khoto. In the north-east, Keru-lun (on the river of that name) is a junction of the southern routes from the Chinese province of Pechili and the western route from Urga, in N.W. Mongolia.

Tibet (in ca. 750,000 square miles; pop. 3,000,000) borders on British India. (See p. 757.)

Chinese Turkestan (or *Sinkiang*) has a total area of 600,000 square miles and a population estimated at 2,000,000. It includes *Zungaria* and *Chinese Turkhary*, and provides sheep, cattle, and transport animals for the caravan routes. The chief centres are Kashgar and Urumchi. (See p. 757.)

CAPITAL OF THE CHINESE REPUBLIC, Nanking

Population (1928), 1,000,000.

Nanking, selected as the capital of China in 1928 in place of Peking, is the principal city in the province of Kiangsu, and the seat of the provincial government of Kiang-nan (embracing the three provinces of Kiang-su, Kiang-si and Ngan-hui. About 1000 A.D. it was named Kiang nan, but in 1368 this was changed to Nanking; ("Southern Capital.") The city is built on the south bank of the Yangtze Kiang river, about equidistant from Canton and Peiping, and is connected by railway (120 miles) with Shanghai. *Peiping*, the former capital, had an estimated population of 1,300,000 in 1921.

Shanghai comprises (a) the *International Settlement* administered by the Shanghai Municipal Council (for the defence of which British Forces were despatched), the estimated population being (1930) 1,011,051 (Foreigners, 36,472; Foreign Defence Forces, 4,083; Chinese, 971,397); (b) the *French Concession*, an independent "stratation, population (1930) 456,015 (Foreigners, 15,149; Chinese, 440,866); and (c) the *Shanghai City, Chapei* and *Nantao* areas surrounding these settlements, population (1930) 1,669,100. (Foreigners, 9,790; Chinese, 1,679,310) — a grand total for Shanghai of 3,157,066.

The population of the principal ports is estimated as follows:—Amoy, 400,000; Canton, 1,370,000; Changsha, 1,275,000; Chingkiang, 500,000; Chungking, 1,011,600; Foochow, 1,500,000; Hangchow, 799,950; Hankow, 290,000; Ichang,

450,000; Kiukiang, 380,000; Klungechow, 500,000; NANKING, 1,300,000; Ningpo, 2,200,000; Shanghai, 3,160,000; Soochow, 1,100,000; Tientsin, 838,000; Tsingtau, 320,000; Wauhsien, 750,000; Wenchow, 1,750,000; Wuchow, 350,000.

FLAG: White sun on blue ground.

COLOMBIA

(Républia de Colombia).

President (1930-1934), Dr. Enrique Olaya Herrera, born 1882, assumed office Aug. 7, 1930.

Envoy Extraordinary and Minister Plenipotentiary in England, Señor Dr. Don Alfonso Lopez

Counsellor, Don Jorge Garcés.

Attaché, Sr. D. Don Bernardo Samper.

Consul-General, Don Alejandro Lopez, 7 Sicilian Avenue, Southampton Row, W.C. 2.

Consul-General in Liverpool, Señor Don Carlos Vernaza, 41 North John Street.

The Republic of Colombia lies in the extreme north-west of South America, having a coastline on both the Atlantic and Pacific Oceans. It is situated between 2° 40' S. to 12° 25' N. lat. and 68° to 90° W. long., with an estimated area of 451,606 square miles, and a population (Census 1928) of 7,821,000, of whom more than one-half are whites and half-castes. The country is intersected by three great ranges of the Andes, known as the Western, Central, and Eastern Cordilleras; the second contains the highest peaks, but the latter is the more important, as it consists of a series of vast table-lands, cool and healthy. This temperate region is the most densely-peopled portion of the Republic.

The principal rivers are the Patia, Cauca, Magdalena, Caquetá and Putumayo. The Patia flows through the famous *Mimma Gorge* of the

Western Cordilleras, and one of its tributaries (the Carchi, or Upper Guatara) is spanned by the Rumiñaca Arch, or *Inca's Bridge*, of natural stone. On the Funza is the Great Fall of *Tegundama*, 480 feet in height.

The Colombian coast was visited in 1502 by Christopher Columbus, and in 1536 a Spanish expedition under Quesada established a government of certain coastal communities under the name of New Granada, which continued under Spanish rule until the revolt of the Spanish-American colonies of 1811-1824. In 1819 *Simón Bolívar* (born 1783, died 1830) established the Republic of Colombia, consisting of the territories now known as Colombia, Panama, Venezuela and Ecuador. In 1829-1830 Venezuela and Ecuador withdrew from the association of provinces, and in 1831 the remaining territories were formed into the Republic of New Granada. In 1858 the name was changed to the Granadine Confederation and in 1861 to the United States of Colombia. In 1886 the present title was adopted. In 1903 Panama seceded from Colombia, and is now a separate Republic.

The Colombian forests are extensive; among the trees are mahogany, cedar, fustic, and other dye-woods and medicinal plants. The mineral productions are emeralds, gold, silver, platinum, copper, iron, lead, and coal; petroleum is available in enormous quantities, and in the year 1931 the output was 18,236,000 barrels, it is possible that new oilfields will shortly be opened near the Venezuelan frontier. The principal agricultural products are coffee, cotton, plantains, and bananas, and in some parts tobacco, wheat and other cereals. Manufactures, for home consumption, consist of woollen and cotton stuffs. The chief exports are coffee, petroleum, gold, bananas, and hides.

The standing army consists of about 10,000 men; the navy has been nearly abolished. Railroads are in their infancy, about 1,500 miles being open in 1932, with 23,206 (1931) miles of telegraph; there are also (1932) 1,880 miles of national roads, in addition to departmental (some macadam) and "ditto" roads (passable by motors in dry weather only). There is a daily passenger and mail service (German) between Bogotá and Barranquilla and a bi-weekly service in concert with Pan-American Airways to the U.S. New York can be reached in 34 days and mail is delivered in England 11 or 12 days after leaving Bogotá. There are wireless stations at Barranquilla, Bogotá, Medellín, Cali and Cúcuta.

Roman Catholicism is the established religion, but all religions are tolerated. Spanish is the language of the country.

COSTA RICA

(República de Costa Rica.)

President (1923-1936), Ricardo Jiménez Oreamuno, assumed office May 8, 1932
Minister of Foreign Affairs, Leonidas Pacheco.

Minister in London (vacant)
Consul-General, London, José Vaigas Porras, 33-36 King William Street, E C 4
Consul, John C. Eggers.

The Republic of Costa Rica, the most southern State of Central America, extending across the isthmus, between 8° 17' and 11° 10' N. lat. and from 82° 30' to 85° 45' W. long., contains an area of about 23,000 English square miles, and a population (Jan. 1, 1931) of 516,031.

For nearly three centuries (1530-1821) Costa Rica formed part of the Spanish-American dominions, the seat of government being at Cartago. In 1821 the country joined in the War of Independence, and from 1824-1839 it was one of the United States of Central America.

The principal agricultural products are coffee, bananas, rice, maize, sugar-cane, potatoes, cocoa and beans, the soil being extremely fertile. The chief exports (1931) are coffee (£2,160,807), bananas (£681,031), cacao, gold and silver bullion, skins and hides, fresh fruit and timber. The imports are dry goods, hardware, provisions, railway materials, machinery, paints, and general merchandise (In 1931, 52 per cent. from United States, 11 from United Kingdom, 10 per cent. from Germany).

The chief ports are Limón, on the Atlantic coast, through which passes the bulk of the

important banana trade with the U.S. and U.K., as well as by far the larger part of the other exports and imports; and Puntarenas on the Pacific coast. In 1932, 514 vessels (1,290,853 tons) entered at Costa Rican ports. About 450 miles of railroad were open in 1929. In 1930 there were 202 post offices, and 202 telegraph offices (3 wireless), with 2,622 miles of telegraph and telephone line. A considerable amount of English capital is embarked in the Republic. Spanish is the language of the country.

Consul, Señor Don Francisco Sanchez Garcia, 95 Linden Gardens, Notting Hill Gate, W. 2.

Cuba (the largest of the "West India" Islands) lies between 74° and 88° W. long, and 19° and 23° N. lat., with a total area of 44,178 sq. miles and a population of 3,661,582 (June 30, 1930).

The island of Cuba was visited by Christopher Columbus, during his first voyage, on October 27, 1492, and was then believed to be part of the

Western mainland of India. Early in the 16th century the island was conquered by the Spaniards, to be used later as a base of operations for the conquest of Mexico and Central America, and for almost four centuries Cuba remained under a Spanish Captain-General. The slave trade was abolished early in the 19th century, and the slaves were emancipated from 1880-1886. The government of Spain was marked by a generally corrupt administration, complicated by internal unrest fomented by external influences, and the various attempts at independence met with severe military repression. The separatist and autonomous agitation culminated in the closing years of the 19th century in a fierce and bloodthirsty war, and although a conciliatory movement was evinced by the Madrid authorities in 1897, the struggle was continued by the party of separation in the island. In 1898 the government of the United States put into execution a threat of interference by the despatch of the battleship *Maine* to Havana harbour, and in February of that year the vessel was sunk by an explosion, the cause of which appears likely to remain an unsolved mystery. On April 20, 1898, the U.S. Government demanded the evacuation of Cuba by the Spanish forces, and a short Spanish-American war led to the abandonment of the island, which was occupied by U.S. troops. From Jan. 1, 1899, to May 20, 1902, Cuba was under U.S. military rule, and reforms of the widest and most far-reaching character were instituted. On May 20, 1902, an autonomous government was inaugurated with an elected President, and a legislature of two houses. The island was, however, again the prey of revolution from July to Sept., 1906, when the U.S. Government resumed control. On Jan. 28, 1909, a republican government was again inaugurated.

Of the total area of 28,000,000 acres, there were (1932) 3,051,470 acres under sugar, about 500,000 acres under tobacco, sweet potatoes and bananas. Rice, coffee, cocoa and maize are also grown and tropical fruits (oranges, coco-nuts, pineapples, &c.) flourish. The chief agricultural products of the island are tobacco and sugar; sugar crop (1930-31) 3,122,000 tons; the chief product of the forests is mahogany, while cedar is also used for boxing the tobacco crop. The live stock includes about 4,500,000 cattle and 600,000 horses, the vast savannahs of Central Cuba being particularly suitable for cattle ranges. 3,800 miles of railroad are open and about 6,000 miles of telegraph line; there are about 2,200 miles of roads.

Spanish is the language of the island.

Consul, Josef Bužnáč, 18 Bedford Square, W.C. 1.

Part of the Austro-Hungarian Monarchy declared its independence on Oct. 18, 1918, as the Czechoslovak Republic, and ten days later the *Národní Výbor* (National Council) of Czechoslovakia took over the administration of the independent territories. The political neighbours of the Republic are Austria and Hungary on the S., Germany and Poland on the N., Germany on the W., and Poland and Rumania on the E. Within these limits are the former Austrian Provinces of Bohemia and Moravia and part of the Province of Silesia; and Northern Hungary from the Danube (at Bratislava, on the Austrian frontier) to the Carpathians (at the headwaters of the Ugg River in the eastern slope of Mt. Vereczka)—a total area of about 54,877 sq. miles, with a population (Census of 1930) as under—

Bohemia	7,106,766
Moravia and Silesia	3,563,157
Slovakia	3,330,885
Subcarpathian-Russia	725,350

Total 14,726,158

Of the total population it is estimated that 65.5 per cent. are Czechoslovaks, 23.3 per cent.

Germans, 5.5 per cent. Magyars, 3.4 per cent. Ruthenians, and 0.5 per cent. Poles. The new State was recognised by Austria in 1918 and by Hungary on March 20, 1919. The National Assembly, consisting of a Senate and a Chamber of Deputies, is elected by universal adult suffrage of both sexes. The executive power is exercised by a Council of Ministers, appointed by the President. The Constitution guarantees religious and political freedom. About 80 per cent. of the people are Roman Catholics.

By the Peace Treaty Czechoslovakia acquired about 80 per cent. of the whole industry of the former Austrian Empire. It has several rich coalfields, and possesses valuable mineral resources which, notably in Slovakia, have not yet been fully developed. Radium, gold, silver, iron, graphite and lead are all mined, while the whole country is rich in mineral and thermal springs. Bohemia has rich deposits of clay, kaolin and sand. The whole country is well farmed, and agricultural production is on a very high level of excellence. In foodstuffs, however, the country is not self-supporting. Thirty-three per cent. of the total area of the country is forest land, and both in the productiveness of the forests and the quality of the timber the forest wealth of the Republic is enormous. In its industrial development Bohemia may be compared to Belgium. In Bohemia, Moravia and Silesia, which have a total population of 10½ millions, more than four million people are engaged in industry. The various industries are well organised, and as regards both machinery and modern improvements the factories are as well equipped as any in Europe. Except in Slovakia and Ruthenia illiteracy is almost unknown, and both the German and Czech elements which compose the working-class population are hard-working and in many cases highly skilled. The new Republic possesses, therefore, many valuable economic advantages, and it is no exaggeration to state that Czechoslovakia is in a far more flourishing state than most of its neighbours.

Czechoslovakia has no direct access to the sea, but has a right of access over the Elbe and Oder to Hamburg and Stettin, for which purpose the Government proposes to canalise the Upper Elbe in order to connect it with the Oder and the Danube. If this proposal is carried out, the country will be traversed by a waterway affording a communication from the North Sea and Baltic, via the Danube, to the Black Sea.

DANUBE COMMISSIONS.

The *International Danube Commission* (Headquarters, Vienna) was created by the Treaty of Versailles (1919), the States represented under the Treaty being Austria, Bavaria, Bulgaria, Czechoslovakia, France, Great Britain, Hungary, Italy, Rumania, Württemberg, and Yugoslavia. The Commission maintains the liberty of navigation and the equal treatment of all flags of the Danube from Ulm (Württemberg) to Braila (Rumania) and its international system, obtaining funds for administrative expenses from equal contributions of all the States represented. From Braila to Sulina (the mouth of the Danube), the navigation is controlled by the *European Commission of the Danube* (Headquarters, Galatz), created by the Treaty of Paris 1856, after the Crimean War; the representation on this Commission is confined to France, Great Britain, Italy and Rumania. The river is connected by canals with the Main, a tributary of the Rhine (Ludwig Canal); a new and deeper canal is under construction to permit the passage of larger craft than at present, thus linking up the whole Rhine and Danube systems across Europe from the North Sea to the Black Sea. The total length of the river is about 1,738 miles, and ocean-going vessels reach Braila, where transshipment into river barges is necessary. A pilotage and river-improvement service is maintained by the International Commission at the Iron Gates (headquarters, Orsova), the expenses being met by shipping dues.

The chief towns on the Danube are the Black Sea port of Sulina, with Galatz (confluence of the Sereth), Braila, Turnu-Severin and Orsova (Iron Gates), in Rumania; Russchuk, Vidin and Lom Palanka, in Bulgaria; Belgrade, the capital of Yugoslavia; Buda-Pest, the capital of Hungary; Bratislava in Czechoslovakia; Vienna (the seat of the Commission), and Linz, in Austria; Passau and Regensburg, in Bavaria; and Ulm, in Württemberg.

The financial situation of the European Commission is shown below:—

	Gold francs
Receipts during 1929	4,652,556
Expenditure, 1929	3,807,534

The receipts consist almost entirely of navigation dues (5,030,653 francs in 1927). The expenditure (1927) included 2,062,191 francs on the prolongation and strengthening of the embankments at Sulina, and 251,507 francs in repayment of the British portion of the loan raised by the Commission in 1924.

British Delegates, Col. Sir John G. Baldwin, K.C.M.G., C.B. (*Plenipotentiary Commissioner*), T. B. Wildman (*Deputy Commissioner*).

DANZIG.

(Freie Stadt Danzig.)

Under Articles 100 and 102 of the Treaty of Versailles, the City of Danzig with the surrounding territory (constituting a total area of about 726 sq. miles, with a population estimated at 390,000) was set up as a Free City, under the protection of the League of Nations, Poland undertaking to conduct her Foreign Affairs. The Free City was constituted Nov. 15, 1920, with an executive Senate and an elected Legislature of 72 members. The harbour is administered by a mixed board of Poles and Danzigers under a neutral President, and the League of Nations is represented by a resident High Commissioner. In Jan., 1922, the Free City entered the Polish Customs Union. The principal exports are coal, timber, cereals, cement, bacon, eggs, mineral oils and sugar, and the imports herrings, iron ore, machinery, scrap-iron, artificial manures, fats, foodstuffs and textiles. The tonnage of ships entered in 1931 was 4,064,733 tons, and of those cleared 4,064,333 tons.

Danzig—*High Commissioner of League of Nations*, Count Manfred Gräfin.

 Norfolk Street, Strand, W. C. 2
Vice-Consul, Birger Dons Møller
Consulates at Falmouth, Hull, Liverpool, Man-
 chester, Newcastle upon Tyne, Glasgow, Leith
 and Belfast.

A Kingdom of Northern Europe, and the smallest of the Northern States, consisting of the islands of Zealand, Funen, Lolland, &c., the peninsula of Jutland, and the outlying island of Bornholm in the Baltic. Denmark is situated between 54° 34'—57° 44' N. lat. and 8° 5'—12° 40' E. long., with an area of 15,042 square miles, and a population (Nov. 5, 1930) of 3,551,000. Nearly one-half of the population live exclusively by agriculture, and one-fourth by manufactures and trade.

In 1864 Denmark was attacked by Prussia and Austria and deprived of Schleswig-Holstein (Prussia taking the whole territory after a further war with Austria in 1866). At the conclusion of peace between the Central Powers and the Allies in 1919, the question of Schleswig-Holstein was subjected to a plebiscite of the inhabitants, and North Schleswig is now part of Denmark.

The common products are wheat, rye, oats, barley, potatoes, cattle, horses, pigs, sheep, and butter. Its manufactures are, for the most part, for home consumption. Its principal imports are coals, manufactured goods (woollens, silks, cottons) iron, hardware, wine, fruit, coffee, tea, maize and colonial produce. In 1930, 1,323,000 hectares were under corn crops, 32,800 sugar beet, 411,000 forage roots, and 797,800 hay crop. In July, 1930, the live stock numbered 494,500 horses, 3,057,400 cattle, 193,000 sheep, and 4,871,900 swine. The crops in 1930 included 9,976,000 hkg (hkg = 100 kilogrammes) of oats, 10,510,000 of barley, 1,547,000 rye, 7,496,000 mixed corn, and 2,780,000 qrs. of wheat. Its chief exports are agricultural produce, including wheat and barley, bacon, hams, flour, butter, eggs, hides, skins, corn-meal and oil-cake, horses, and cattle. Sea-going mercantile marine (1930) 599 steamers, with a gross tonnage of 735,490. There are (1930) 5,294 kilometres of railway and 12,053 km. of telegraph line.

DEFENCE.—The Army consists of about 12,000 trained men, the vote for 1930-31 amounting to Kr. 35,000,000. The Navy consists of 4 coast-defence ironclads and 1 completing, 2 small cruisers, 23 torpedo-boats (built and building), 14 submarines (built or building). Vote, 1930-31, Kr. 22,000,000.

EDUCATION is free and compulsory, the schools being maintained by local taxation. Special schools are numerous, technical and agricultural predominating. There are Universities at Copenhagen and Aarhus.

The outlying possessions and colonies of Denmark have an area of about 50,000 square miles, with about 40,000 inhabitants. They include the FARÖE, or Sheep Islands (515 sq. m., pop., 1930, 24,200); GREENLAND (ice-free portion about 50,000 sq. m., total area about 830,000 sq. m., population, 1922, 14,400), the trade of which is a Government monopoly.

Copenhagen, distant 726 miles; transit, 36 hours.

DOMINICAN REPUBLIC.

(República Dominicana.)

President (1930), General Don Rafael Trujillo,
Sworn in, Aug. 16, 1930.

Envoy Extraordinary and Minister Plenipotentiary in London, Señor Rafael Brache,
67 Eaton Place, S.W. 1.

Secretary of Legation and Consul-General,
Señor G. S. Henriquez.

The Republic of Santo Domingo, formerly the Spanish portion of the island of that name, is the oldest settlement of European origin in America. The island was discovered by Christopher Columbus in December, 1492, who named it "La Española" or "Little Spain." In 1496 he ordered his brother, Bartholomew Columbus, to found the capital at the mouth of the Ozama River, on the south of the island, which city he called Santo Domingo. The island immediately became the objective for adventurous Spanish colonists, who exploited the native Indians, almost to the point of extermination for the sake of the gold found in the streams. African negroes were imported for the sugar and other plantations both in Santo Domingo and Haiti, and this accounts for the present large proportion of negroid blood in both countries. A short time after its discovery Santo Domingo became the "jumping-off point" for other adventurers proceeding from Spain to the newly-found mainlands of the western hemisphere, and this greatly diminished the importance of the island and caused an exodus to those places.

In 1821 Santo Domingo broke away from Spain and declared itself independent, but in 1822 it was invaded and subjugated by its negro neighbours from the west, the Haitians. The latter were driven out in 1844, when the Dominican Republic was definitely proclaimed by the natives, and has so remained except for an interregnum of two years (1862-1864) when the Spaniards again took possession, but were eventually forced to withdraw.

On November 29, 1916, American military forces landed in Santo Domingo and a Military Government was proclaimed. From October 21, 1922, a Provisional Dominican Government was in office until July 12, 1924, when a properly elected Constitutional Government was installed, with complete authority over all matters except the collection of the customs and the redemption of foreign obligations, which continue to be administered by an American official.

The Dominican Republic comprises an area of about 19,322 square miles, with a population estimated at 1,000,000. An extensive system of motor highways, totalling nearly 700 miles of first class roads, has been built, but they have been allowed to fall into very poor condition for want of proper maintenance; considerable improvements are now, however, being effected, and the streets of the capital repaved. There is a direct road from Santo Domingo City to Port-au-Prince, the capital of Haiti, enabling the journey from capital to capital to be made in one day. There are about 150 miles of public railway, and a telephone system connects practically all the towns of the republic. There are six wireless stations, and the All America Cable Company maintains an efficient service with all parts of the world.

Sugar and cocoa beans are the most important

crops, and coffee and tobacco are grown in fair quantities, the other products being mahogany, furniture woods, lignum vitae, log-wood, divi-divi, cotton, wax, honey, maize, hides and turtle-shell.

Of the total import trade in 1929, 57 per cent. came from the United States, 5 per cent. (rice) from British India, and 4 per cent. from the United Kingdom. British trade is hampered by distance (as compared with the U.S.), by lack of resident British merchants and industrial undertakings, and by indifferent and slow steamship services from Europe.

ECUADOR.

(República del Ecuador.)

President of the Senate, in charge of the Executive Power, Mr. Alberto Guerrero Martínez

Minister in London, (vacant).

Chargé des Affaires, Sr. Carlos Arrarte

Consul-General in London, Sr. Carlos Arrarte,

23 College Hill, Cannon St., E.C. 4.

Consuls at Liverpool, Birmingham, Hull, Glasgow, and Cardiff.

An equatorial State of South America, extending from lat. 1° 38' N. to 6° 5' S., and between 60° 20' and 82° W. long. (according to the Ecuadorian geography, but there are boundary disputes with Peru), comprising an area of 276,000 English sq. miles.

The former Kingdom of Quito was conquered by the Incas of Peru in the latter part of the 15th century. Early in the 16th century Pizarro's conquests led to the inclusion of the present territory of Ecuador in the Spanish Vice-Royalty of Peru. The independence of the country was achieved in a revolutionary war

which culminated in the battle of Mount Pichincha (May 24, 1822).

The Republic of Ecuador is divided into 17 provinces and one territory. It has a population of about 3,000,000, mostly descendants of the Spaniards, aboriginal Indians, and Mestizoes. The territory of the Republic extends across the Western Andes, the highest peaks of which are Chimborazo (20,702 ft.), Iliniza (17,405 ft.), Carhuarazo (16,515 ft.), Cotacachi (16,302 ft.), and Pichincha (16,000 ft.) in the Western Cordillera; and Cotopaxi (19,498 ft.), Antisana (18,864 ft.), Cayambe (19,160 ft.), Altar (17,730 ft.), Sangay (17,464 ft.), Tungurahua (16,690 ft.), and Sincholagua (16,365 ft.) in the Eastern Cordillera. Ecuador is watered by the Upper Amazon, and by the rivers Guayaquil, Mira, Santiago, Chones, and Esmeraldas on the Pacific coast. There are extensive forests, and the cinchona bark tree is common. The *Witch-broom* disease, which appeared (1921) in the cocoa plantations, has had a disastrous effect on the agricultural wealth of the country. The average yearly output previous to 1921 was one million quintals (of 100 lb.) as compared with 335,052 quintals in 1929, 387,424 in 1930 and 283,189 in 1931.

Its chief products are cocoa, petroleum, rice, vegetable ivory, bananas, cotton, coffee, india-rubber, sugar, orchella weed, straw hats and hammocks, bark, yams, tobacco, fruits, sarsaparilla, wheat, &c. Its minerals consist of gold, quick-silver, lead, iron and copper; emeralds and rubies are occasionally met with, and sulphur is found in many parts. The chief exports are cocoa, petroleum, caoutchouc, vegetable ivory and gold, cinchona bark, Panama hats, coffee, and cattle; the chief imports are textile machinery, foodstuffs, and manufactured goods. A railroad connecting Guayaquil and Quito was opened in 1908. The *Galapagos* (Tortoise) *Islands* (2,870 square miles) belong to Ecuador.

In October, 1926, an American Financial Mission arrived in the country and their recommendations have been enacted as laws. A new customs tariff, prepared by the Mission, came into force on July 1, 1927, and produced 26,727,725 *sucre*s in the year ended Dec. 31, 1928, 26,549,203 *sucre*s in 1929, 22,287,337 *sucre*s in 1930 and only 17,216,546 *sucre*s in 1931, and a new monetary law reintroducing the gold standard, the currency being stabilized at 5 *sucre*s = \$1 U.S. A Central Bank was established on March 4, 1927, and a new banking law enacted. Ecuador suspended the gold standard on Feb. 8, 1932, and in May, 1932, introduced control of foreign exchange transactions.

In November, 1927, the Swedish Match Company of Stockholm secured the exclusive right to import and manufacture matches in Ecuador for a period of 25 years in return for a loan of \$8,000,000 *sucre*s, which sum was applied towards the establishment of a Mortgage Bank. Congress of 1932 rescinded this contract, and the monopoly is now administered direct by the Government.

The language of the country is Spanish.

Office of Legation, Bute House, 75 South Audley Street, W. 1.

Counsellor, and *Chargé d'Affaires ad interim*, (vacant).

and Secretary, Georges Cattani Effendi.

and Secretary, Radi Abou-Seif Radi Effendi.

Attaché, Hassan Moharram Effendi.

Archivist, Mohamed Mostafa Yassin Effendi.

Asst. do, Stagiaire Hassan Abdel Gaffar Effendi.

Consul, Mohammed Hussein Effendi.

* A *Waqf* is an institution of Muhammadan Law similar to the "trust" of English Law. When property is made *Waqf* it is dedicated expressly or implicitly to some charitable or religious object, or for the benefit of private individuals. The nearest British equivalent is "The Public Trustee."

The territory of Egypt comprises (1) *Egypt Proper*, forming the N.E. corner of the African continent, divisible into (a) the valley and delta of the Nile, (b) the Libyan or Western Desert, and (c) the Arabian or Eastern Desert; (2) *The Peninsula of Sinai*, forming part of the continent of Asia; and (3) a number of *Islands* in the Gulf of Suez and Red Sea, of which the principal are Jubal, Shadwan, Gafatin and Zeberzed (or St. John's Island). This territory lies between 22° and 32° N. lat. and 24° and 37° E. long. The northern boundary is the Mediterranean, and in the south Egypt is continuous with the Sudan. The western boundary runs from a point on the east, N. of Sollum (long 25° E.), inland in a south-westerly direction for some distance and then turns S. along a meridian line approximately in long. 22° E. until it meets the parallel of 22° N. lat., which forms the N. boundary of the Sudan. The E. boundary follows a line drawn from Rafa on the Mediterranean (34° 15' E. long.) to the head of the Gulf of Aquaba, from which point the remainder of the E. boundary is washed by the waters of the Gulf of Aquaba and the Red Sea. The "settled land area" is stated officially at 7,667,000 *faddans* (23,432 square miles) and the area of lakes at 641,000 *faddans* (1,039 sq. miles), a total of 8,308,000 *faddans* (23,470 sq. miles), but within the boundaries above-mentioned is enclosed an area of about 363,181 sq. miles. The population (Census of 1927) numbered 14,168,756, distributed as under:—

Division.	Population.

TOTAL	12,750,928	14,168,756

(1) Dahkla and Kharga Oases. (2) Including Siwa Baharia and Farafra.

Of the total population in 1927 males numbered 6,369,517 and females 6,348,721. In 1927, males numbered 7,036,298 and females 7,096,996 (Nomads being excluded in each case).

Physical Features.—The Nile valley varies in width from less than half a mile in the southern granitic region to over 10 miles in the northern limestone region, and the cliffs in some places rise to heights of over a thousand feet above the river. The fertile lands, on which the prosperity of the country depends, occupy the floor of the valley between the river and the bounding cliffs, while to the north of Cairo they spread out into the irregular fan-shaped formation of the Delta which comprises the six provinces of Lower Egypt, with the richest soil in the country. The Nile has a total length of 3,470 miles from the Victoria Nyanza to its mouth. In the 960 miles of its course through Egypt it receives not a single tributary stream. The river has a regular yearly rise and fall, attaining its maximum level about the middle of September and its minimum about the end of May. At Cairo the average rise and fall is about 13 feet. Westward from the Nile Valley into Tipoli stretches the *Libyan Desert*. Though as a whole it constitutes one of the most arid and inhospitable regions of the world, the Libyan Desert contains a number of depressions wherein wells and springs furnish water in sufficient quantity to irrigate small areas and to support populations of several thousands. These depressions are the *Oases*, of which the principal from S.E. to N.W. are known as Kharga, Dahkla, Farafra, Baharia, and Siwa. On the eastern edge of the Libyan Desert, a few miles south-west of Cairo, stand the Pyramids of Giza, of which the highest, the *Great Pyramid*, is 451 feet high. (A new pyramid, making 4 in all, was discovered by Prof. Selim Hassan in Feb. 1932.) Close to the pyramids is the *Great Sphinx*, 180 feet long. In the Eastern Desert a great back-bone of high and rugged mountains extends north-westward from Abyssinia to near Suez, and reappears as a detached mass in the Peninsula of Sinai. Flanking this mountain chain on the west, between the axis of the range and the Nile, are plateaux of sandstones and limestones, dissected by wadis (dry water-courses), often of great length and depth, with some wild vegetation and occasional wells and springs. The roads follow the course of the main *wadis* from well to well, and here and there are to be found small encampments of wandering Arabs. The north (Mediterranean) coast of Sinai is flat and sandy. Inland, the ground gradually rises into a highly dissected limestone plateau, which extends southward for about 150 miles and terminates in the great scarp of El Tih. South of El Tih the character of the country abruptly changes, the southern third of the peninsula being formed of rugged granitic mountains intersected by deep ravines. Springs and wells occur in fair abundance, mostly in the *wadis*, and running water (mostly brackish) is found at a few points.

Native Population.—There are three distinct elements in the native population of Egypt. The largest, or "Egyptian" element, is a Hamito-Semitic race, known in the rural districts as *Fellahtin* (*fellaht* = ploughman, or tiller of the soil). The *fellahtin* have been mainly Muhammadans since the conquest of the country in the 7th century, but 824,474 Coptic Christians are enumerated in the towns and villages. These Egyptian townsmen and peasantry numbered 14,168,756 in

the total of the Census of 1917 (including 126,432 local subjects of foreign origin). A second element is the *Bedouin*, or nomadic Arabs of the Libyan and Arabian deserts (22,562 Bedouins and 207,354 Sudanese and Berberin), of whom about one-seventh are real nomads, and the remainder semi-sedentary tent-dwellers on the outskirts of the cultivated land of the Nile Valley and the Fayum. The third element is the *Nubian* of the Nile Valley between Aswân and Wadi-Halfa, of mixed Arab and negro blood. The Bedouins and Nubians are Muhammadans.

Foreign Population.—At the Census of 1917 the foreign residents were 205,998, of whom 30,797 were Turks, 56,722 Greeks, 40,198 Italians, 24,354 British, 21,270 French and Tunisians, 2,789 Austro-Hungarians, 4,225 Russians, 157 Germans, 23,932 other Europeans and Americans, and 1,496 Persians.

Religions.—At the Census of 1917 there were 11,623,753 Muhammadans, 1,026,107 Christians, 59,581 Jews and 8,814 other religions. The chief Muhammadan religious authorities in Egypt are the *Sheik el Gami el Azhar* and the *Mufti el Di-yar el Masriya*.

Government.—From B.C. 30 to A.D. 639 Egypt was a province of the Roman Empire, but in A.D. 640 the Christian inhabitants were subjugated by Moslem invaders, and Egypt became a province of the Eastern Caliphate. In 1517 the country was incorporated in the Ottoman Empire, and was governed by pashas sent from Constantinople until the beginning of the 18th century, when for about 100 years the ruler was chosen from among the Mamelukes, or bodyguard. *Mohammed Ali*, who was proclaimed *Pasha* in 1805, exterminated the Mamelukes in 1811, and was eventually made hereditary governor of Egypt and the Sudan by a *firman* from the Sultan of June 1, 1841.

Rulers of Egypt since 1811.

Name	Born.	Reigned.
Mohammed Aly (<i>Pasha</i>)	1769	1805-1848
Ibrahim (<i>Pasha</i>)	1789	1848
Abbas I	1813	1848-1854
Said	1822	1854-1863
Ismail (<i>Khedive</i>)	1830	1863-1879
Mohammed Tewfik (<i>Khedive</i>)	1852	1879-1892
Abbas II (<i>Khedive</i>)	1874	1892-1914
Hussein Kamel (<i>Sultan</i>)	1853	1914-1917
Fuad I (<i>King</i>)	1868	1917-

Legislature.—Legislative power is exercised by the King in concurrence with the Parliament within the limits laid down in the Constitution established by Royal rescript of April 19, 1923, and general elections took place for a Parliament, consisting of two houses, which first assembled March 25, 1924. Parliament consists of a Senate of 100 members of whom three-fifths are nominated by the King, the remainder being elected (for 10 years) on the basis of 1 Senator for every 250,000 inhabitants; and of a Chamber of 150 Deputies elected (for 5 years) on the basis of 1 for every 60,000 inhabitants.

Executive.—The executive power is exercised by the King through his Ministers within the limits of the Constitution, the Ministry being held jointly responsible to the Chamber of Deputies.

Local Government.—The chief towns constitute governorships (*muhafzas*), and the remainder of the occupied country is divided into provinces (*mudirias*), which are subdivided into districts (*markaz*), each under a *mamur*, who controls the

head man (*omda*) of each village in his district. By the law of 1883 provincial councils were instituted, consisting of two representatives from each *markaz*, under the presidency of the *mudir* (or governor) of the province. These councils were reorganised in 1910 and were made the elementary education authority for the province, with certain restricted powers of local government.

Defence.—In 1882, a military revolt, headed by an officer of the Egyptian Army (Ahmed Arabi *Pasha*) assumed alarming proportions, and a British expedition was despatched to re-establish the authority of the Khedive. Meanwhile a revolt had broken out in the southern provinces, headed by Sheikh Mohammed Ahmed, of Dongola, who proclaimed himself a *Mahdi* of Islam, and the British expeditionary force, sent to quell the rebellion of 1882, remained in the country as an army of occupation. The defence of Egypt is reserved by the Constitution and remains under British control, the British garrison (under the command of a British general officer) amounting to 3 cavalry regiments, 3 batteries of artillery, 2 companies of engineers, 7 battalions of infantry and 1 armoured car company, a total of 11,420. Service in the Egyptian Army is nominally compulsory on all Egyptian subjects between the ages of 19 and 27, the recruits required each year being chosen by ballot; but certain classes (professors, students, Government employees, &c.) are exempt, and exemption may also be purchased for £250, if paid before the ballot. Natives of the Sudan are enlisted voluntarily for service in the Egyptian Army, which had a strength of about 11,200 all ranks in 1927.

There is no Navy in the proper sense of the term; there are 3 small cruisers belonging to the Coast Guard and Fisheries service, and 4 vessels under the Ministry of Communications, while the different Government Departments possess steamers on the Nile for inspection purposes.

The Egyptian Police (under the Ministry of the Interior) consists of City and Provincial Police, the former comprising 306 officers (75 Europeans), 476 European constables, and 6,525 men, the latter 369 officers and 6,162 men. There are also 60,859 *ghafirs*, or native night-watchmen.

Education on native lines has long been given in elementary vernacular schools. The native system of education is completed by the more promising pupil at the Azhar University in Cairo, the principal University of the Moslem world. In 1930-31 there were 270 Elementary Schools (*Maktabs*) under Government supervision, with 42,000 pupils and 2,481 *Maktabs* under inspection for grants-in-aid with 301,000 pupils. The government primary schools give a 4-years' course and prepare for admission to secondary, agricultural and other special schools. There are Colleges of Medicine, Law, Education, Engineering, Fine Art, Commerce, Veterinary Science and Agriculture at Cairo, and evening classes for workmen. Much assistance is given to education by private enterprise and benevolence and foreign schools abound. The State University, founded in 1908, had 1,400 students in 1930-31.

Agriculture.—The total area of Egypt is estimated at approximately 222,400,000 English acres, of which about 8,450,000 acres are formed of the alluvium brought down by the Nile from the Abyssinian hills, the remainder being

chiefly limestone desert. Only the former are cultivable, and only the portion that can be irrigated from the waters of the Nile—this portion amounts at present to 5,600,000 acres (1906), and is capable of extension (to 7,600,000 acres) by the improvement of water storage facilities and means of distribution. In 1930 the land was held as to 5,303,568 *faddans* by 1,790,033 native owners, and as to 489,741 *faddans* by 6,294 foreign owners. The principal crops grown during *Seif* (summer) are cotton, rice, sugar cane, and Sorgho (a variety of maize). *Nilû* (flood) of *Saif*, has the date of its commencement fixed by the Irrigation Department according to the quantities of water available before the flood, which reaches its highest level in September—it generally commences in July. The principal crops are maize and rice. *Chitwi* (winter) commences in November and ends in June. The principal crops are cereals, bersem (a variety of clover) and—mainly in Upper Egypt—beans, lentils, onions and helba. The total cotton crop and the value of the quantities exported in recent years:—

Year	Kantars.	Export value
1924-25	7,273,974	£85,544,253
1925-26	7,964,645	43,825,564
1926-27	7,652,189	35,961,447
1927-28	6,041,499	45,138,000
1928-29	8,070,000	41,361,000
1930-31	8,015,400	..

Live Stock.—In 1930 the cattle numbered 776,008, buffaloes 795,546, horses 35,886, mules 21,105, donkeys 763,321, sheep 1,129,033, goats 643,916, and camels 166,297

Minerals.—The riparian districts of the lower Valley of the Nile are ill-provided with workable mineral deposits, with the exception of abundant building materials. The mineral resources of Egypt, therefore, are situated in its otherwise barren deserts. Known deposits are chiefly situated at great distances from one another and from the Nile. This fact has retarded exploration and development, but of late years considerable progress has been made. Owing to lack of knowledge of mining, consequent upon their pursuit being entirely agricultural, the local industrial classes have had very little hand in the existing enterprises, whose capital and organisation are chiefly foreign.

Manufactures and Industries.—The principal articles of Egyptian manufacture are cotton and woollen fabrics, silks, embroideries, brass, silver and copper ware, leather goods, rugs, pottery, alcoholic beverages, sugar, perfumery and cigarettes. The principal Egyptian industries are dyeing, tanning and cement.

Railways.—The principal lines radiate from Cairo to Alexandria (and on to Rosetta), Damietta, and Ismailia (continuing northwards to Port Said and southward to Suez). From Cairo the line runs southwards for a distance of 554 miles to Shellal, the First Cataract. At this point a steamer connexion runs to Wadi Halfa, connecting the Egyptian State with the Sudan Government Railways. Westwards from Alexandria (and close to the coast) runs a line, which it is hoped to extend eventually to the frontier at Sollum, thus joining Tripoli to Egypt. The total length of the Egyptian State Railways (excluding the Auxiliary Railways of Upper Egypt and the Western Oases Railway) on March 31, 1930, was 2,300 miles. 27,000,000 passengers and 6,000,000 metric tons of merchandise

were carried during 1929-30, the net receipts being £Ea. 965,570. The gauge is standard (4 ft. 8½ in.), with the exception of 128 miles between Luxor and Shellal, which are 3 ft. 6 in. gauge. There are two other State-owned lines in Egypt, namely, the Auxiliary Railways of Upper Egypt, consisting of 282 miles of standard gauge, and the Western Oases Railways, a length of 141 miles (75 centimetre gauge) connecting the oasis of Kharga with the Nile Valley. In addition to the Government lines, there are 865 miles of light railways exploited by public companies.

Motor Vehicles.—On Dec. 31, 1928, there were 14,122 private motor cars, 6,311 taxi-cabs, and 4,045 lorries and omnibuses.

Caravan Routes.—The principal caravan routes lead to the Oases of the Libyan Desert (though Kharga can now be reached by train), whence there is a route, known as the Darb el 'Arbain, leading to Dar Fûr and the south of the Sudan. There are many well-known routes across the Arabian Desert to the Red Sea, that from Qena to Qoseir being probably the most frequently used.

Shipping.—For the SUEZ CANAL see pages 946-7.—Apart from the three great seaports of Alexandria, Port Said, and Suez, Egypt has but few harbours and anchorages adapted for large craft; the principal are those of Sollum and Matruh on the Mediterranean, Tor, Abu Zenima, Zeitia, Jemsa and Hurgada in the Gulf of Suez, and Safaga, Qoseir and Halaib on the Red Sea. The Khedivial Mail Steamship Line (which is under British management) has its headquarters at Alexandria and a depot at Suez. The principal port is Alexandria, where 2,171 vessels (5,155,000 tons) entered and 2,176 vessels (5,187,800 tons) cleared in 1930.

Posts and Telegraphs.—There were in 1930 4,069 post offices and stations, dealing with 81,000,000 letters and post-cards, and 30,000,000 newspapers, &c., and a total foreign correspondence of 58,000,000. There were on March 31, 1930, 233,000 miles of telegraph and telephone wire. A system of savings banks has been introduced, under the control of the Post Office, the actual deposits being collected in rural districts by the *sarrâf* (village tax-collector).

	1930-31	1931-32.
Revenue	£E36,277,000	£E37,372,000
Expenditure	44,915,000	37,378,000
Imports	£E47,488,760	£E31,528,800
Exports	31,941,592	27,937,120
Imports from U.K. .	9,608,000	£E8,838,000
Exports to U.K. . .	13,910,000	10,857,000

Debt.—The *Caisse de la Dette*, a body representing the creditors of the Egyptian Treasury, has considerable powers and special privileges. The *Caisse*, appointed during an era of bankruptcy, succeeded in protecting the interests of the bondholders, but as Egypt became solvent and prosperous, its stringent regulations prevented the development of the country out of surplus revenue, a large part of which was held in suspense as contingent security for the service of the debt. Though the *Caisse* still exists, its duties are now limited to receiving the revenues necessary for the interest and for the payment of the coupons as they become due, while it also holds a considerable reserve fund (£E37,920,792 on April 30, 1931), the interest on which reduces the amount of the Treasury contribution. The

Egyptian debt was stated as follows (in £ sterling) on April 1, 1930 and 1931:—

Debt.	1930	1931.
Guaranteed Debt, 3 per cent.	£ 3,994,400	£ 3,760,400
Privileged Debt, 3½ per cent.	30,633,980	30,633,980
Unified Debt, 4 per cent.	55,250,460	55,250,460
Total	89,878,840	89,644,840

The Cost of the Debt (in the Budget for 1931-32) inclusive of £2664,826 assigned to the service of the Ottoman Loans of 1855, 1891 and 1899, which were guaranteed on the Egyptian Tribute, was stated at £4,101,903.

CAIRO, the capital (population 1927, 1,064,567), stands on the E. bank of the Nile, about 14 miles from the head of the Delta. Its oldest part is the fortress of Babylon in old Cairo, with its Roman bastions and Coptic churches. The earliest Arab building is the Mosque of 'Amr, dating from A.D. 643, and the most conspicuous is the Citadel, built by Saladin towards the end of the 12th century. The bazaars are always interesting, especially the Khân-el-Khalill, the Hamawi, and the Brass Bazaar, though the Muski, which leads to them, is fast losing its oriental character.

ALEXANDRIA (population 1927, 573,023), founded B.C. 332 by Alexander the Great, was for over 1,000 years the capital of Egypt. Its great Pharos, or lighthouse, was one of the "Seven Wonders of the World" (see p. 170). It now contains two royal palaces, Ras-el-Tin and Montaza, while almost the entire cotton trade of the country is here controlled by the big dealers and brokers. At the census of 1927 the towns of Ianta (90,014), Port Said (104,603), Mansura (63,696), Assiut (57,132), Faiyûm (52,372), Zagazig (52,331), and Damauhur (51,709), also exceeded 50,000 inhabitants.

Secretary, V. Ojanson.

Agricultural Attaché, V. Raud.

The most northerly of the Baltic States is bounded on the N by the Gulf of Finland, on the S by Latvia, on the W. by the Baltic Sea, and on the E. by Lake Peipus and Soviet Russia (along a line roughly parallel with the eastern shore of the lake). The islands of Dago, Osel and other smaller islands in the Baltic form part of the Republic. It has an area of about 18,632 sq. miles (within the boundary settled by agreement with Soviet Russia), with a population (Jan. 1, 1923) of 1,119,518 (87 per cent. Estonians, 8 per cent. Russians, 1 per cent. Germans). Agriculture and dairy farming are the chief industries, engaging 59 per cent. of the population. The value of the agricultural production in 1926 was £15,000,000, rye, oats, barley, flax and potatoes being the chief crops, and butter, bacon, and eggs the chief products of dairy farming. There are important manufactures, including cotton, woollen, paper, timber, matches and distilling, with annual production valued at £7,000,000. There were (1923) 760 miles of broad gauge and 550 miles of narrow gauge railway in operation.

Legislature consists of a single-chamber Assembly (Riigikogu) of 100 members elected for 3 years by universal adult suffrage. The executive is entrusted to a council of Ministers.

the Prime Minister being the Head of the State. The supreme organ of the Judicature is the State Court of Justice in Tartu (Dorpat).

ETHIOPIA.

(Abyssinia.)

Emperor, His Imperial Majesty Haile Selassie I, G.C.B., G.C.M.G., G.C.V.O., LL.D. (son of the late Ras Makonnen, Governor of Harar); born 1891; crowned as Negus Oct. 1928; proclaimed Emperor April 2, 1930; crowned Nov. 2, 1930.

Crown Prince, H.I.H. Prince Asfa Wersai, eldest son of the Emperor, born July 27, 1916, married May 9, 1932, a daughter of Ras Sayoum.

Minister in London, Hajjond Zellaka, Aguediou. Legation, 83 Elm Park Gardens, S.W. 10.

The area of Ethiopia and its dependencies is estimated at 420,000 square miles, with an estimated population of 5 to 6 millions, of whom less than one-half are Ethiopians and the remainder Gallas, negro tribes on the west and south frontiers, and Danakils and Somalis on the east. The political neighbours are the Sudan, the Italian colony of Eritrea, French Somaliland, British Somaliland, Italian Somaliland, Kenya Colony and the Uganda Protectorate.

Ethiopia is volcanic and mountainous, and contains some mineral wealth; iron and coal are not uncommon, and gold is washed in various streams, while mica, platinum, salt, saltpetre, and sulphur are also procurable. The lower country and deep valley gorges are very hot; the higher plateaus are well watered, with a genial climate. In the hotter regions, sugarcane, coffee, &c., flourish; in the middle zone

maize, wheat, barley, wild oranges and other fruit trees, tobacco, potatoes, &c., are cultivated; and above 6,000 feet are excellent pastures with some corn cultivation. There are two seasons in the year, a dry winter and a rainy summer from June to September. The chief river is the Blue Nile, issuing from the Tana lake; the Atbara and many other tributaries of the Nile also have their rise in the Abyssinian highlands. Horses, mules, donkeys, oxen, goats, and sheep, and camels in the lowlands, form a large portion of the wealth of the people.

The Ethiopians are Christian (a branch of the Coptic Church), and their rulers claim descent from Menelik, the son of Solomon by the Queen of Sheba. The government is nominally an autocracy, but the Emperor's power does not yet extend throughout the country. There is very little popular literature, but education shows signs of progress. In addition to foreign mission schools, there are 20 Ethiopian schools in the country, of which 4 are in Addis Ababa. The potential army numbers between 600,000 and 1,000,000. The principal pursuits are agriculture and cattle breeding, the chief exports being coffee, civet, wax, hides and gold. The import duty, except for non-spirituous liquors and for a few articles on the free list, is 20 per cent. *ad valorem*; there are certain heavy consumption taxes collected additionally. A railway, which is under French control, links Addis Ababa, the capital, *via* Dire Dawa, with Jibuti, 486 miles away. The Government post and telephone administration is under French management, and the Italian Government have a concession that gives them control of a telegraph line from Addis Ababa to Asmara. The principal towns besides Addis Ababa are Dire Dawa, Harar, Goré, Jimma, Deba Markos (the capital of Gojam), Adua (the capital of Tigre), Gondar, Sayo, Aksum, Antalo, Dembecha and Ijube. There are ancient architectural remains at Aksum, Gondar, and Ankober.

CAPITAL, Addis Ababa (population fluctuates, but is ordinarily about 40,000). Harar, in Eastern Ethiopia, has a population of about 25,000.

Total imports (1931)	£753,775
Total exports (1931)	521,520
Imports from U.K. 1931 (about)	80,000
Exports to U.K. 1931 (about)	24,900

FLAG: Green, red, yellow.

Maji—Consul, Capt. E. C. R. Whalley.

Addis Ababa is 500 miles from Zella, *via* Harar; letters from London are from 20 to 24 days in transit to Addis Ababa; train from Jibouti takes 3 days; in dry seasons through train makes the journey in 36 hours.

FINLAND.

(Suomi.)

President, Pehr Evind Svinhufvud, born 1861, assumed office, March, 1932.*Prime Minister*, Juho Emil Sunila.*Foreign Affairs*, Baron A. Yrjö-Koskinen.*Minister in London (vacant)*—*Legation*, 2 Moreton Gardens, S. Kensington, S.W. 5*Chargé d'Affaires (ad interim)*, G. A. Gripenberg.*Counsellor*, Eino Wällikangas.*and Sec.*, Aaro Pakaslahti.*Military Attaché (vacant)*.*Commercial Attaché*, A. I. Mälinen (*acting*), 103 Cannon Street, E.C. 4.

A country situated on the gulfs of Finland and Bothnia, which was conquered by Russia from Sweden, and united to the Russian Empire, as an autonomous but not sovereign Grand-Duchy, in 1809. When the Russian Empire broke down in 1917 Finland declared herself an independent sovereign state (Dec. 6, 1917). The following year the country sustained severe disturbances on account of the aggression of Russian Bolshevism, but succeeded in restoring order, and the relations between Finland and Russia were finally settled by the Treaty of Dorpat (Oct. 1, 1920). The area is 149,926 square miles, with a population (1932) of 3,667,067, of whom 88.7 per cent. were Finnish-speaking, 11 per cent. Swedish-speaking, and 0.3 per cent. others (mainly Laps, leading a nomadic life in the north). Nearly all the inhabitants are Lutherans. The *Åland Archipelago*, a group of some 300 small islands at the entrance to the Gulf of Bothnia (area 537 square miles, population about 27,000), forms part of the Republic. There are 3 universities, 1 at Helsinki (Helsingfors) and 2 at Turku (Åbo), the university of Helsinki (founded 1640) has Turku and removed to Helsinki in 1828) has nearly 5,000 students, of whom about 1,000 are women. In addition, there are 1 technical and 2 commercial schools. The leading crops are rye, barley, oats, potatoes. Saw mills, wood pulp, cellulose and paper manufacture provide the chief industry, and the forests (62,400,000 acres) are a great source of wealth; there is no European country so wealthy in forests except Russia, the exports of timber in 1928 being 1,121,000 standards; wood pulp, cardboard and paper, and dairy produce are also exported. There are (1931) 3,378 miles of railroad and about 3,900 miles of telegraph, with a well developed telephone system (32 per 1,000 inhabitants). There is railway connexion with Sweden and Russia, and telephone connexion with most European countries and with U.S.A. The merchant fleet (1932) consists of 521 steamers (167,754 net tons), 132 motor vessels (12,096 net tons) and 281 sailing vessels (66,563 net tons). Service in the Army is universal and compulsory, the peace effective being about 25,000 all ranks; there is also a volunteer organisation of Civic Guards with an enrolled strength of about 100,000.

The country was formerly governed by the Finnish Senate of 22 members, with a Diet of 4 estates elected by the people; but under the Constitution of Jan. 1, 1907, there is a single Chamber elected by universal suffrage of both sexes, women being likewise eligible for election

to the Chamber. Finland was thus the first country to concede woman suffrage and representation, and it is noteworthy that it was gained without agitation.

Finland was for some years a Prohibitionist country, the only one in Europe, but after popular vote Prohibition was repealed by law as from April 5, 1932.

Finnish and Swedish are the official languages.

FRANCE.

(République Française.)

President of the Republic (1932-1939), Albert Lebrun, born Aug. 29, 1871, assumed office May 10, 1932.

* The Finnish Mark was stabilized on a gold basis in 1926, 1932 P.M. = 5/- sterling at par; Finland went off the gold standard Oct. 13, 1931.

MINISTRY (June 4, 1932).

Prime Minister and Minister for Foreign Affairs,
M. Edouard Herriot.
Minister for Interior, M. Camille Chautemps.
Minister of Justice, M. René Renoult.
Minister of Finance, M. Germain-Martin.
Minister of the Budget, M. Painade.
Minister of War, M. Paul-Boncour.
Minister of Marine, M. Leygues.
Minister of Mercantile Marine, M. Léon Meyer.
Minister of Posts and Telegraphs, M. Queuille.
Minister of Air, M. Painlevé.
Minister of Commerce, M. Julien Durand.
Minister of Public Instruction, M. de Monzie.
Minister of Colonies, M. Albert Sarraut.
Minister of Pensions, M. Alméidas.
Minister of Public Works, M. Daladier.
Minister of Labour, M. Dalimier.
Minister of Agriculture, M. Abel Gardey.
Minister of Public Health, M. Justin Godart.

Ambassador in London, Monsieur de Fleuriat,
Albert Gate House, Hyde Park, S.W. 1.
Counsellor, M. Roger Cambon.
1st Sec., M. Truelle.
and Sec., M. G. Leverdier.
3rd Secretaries, M. de Blesson; M. Saffroy.
Attaché, Comte de Linur.
Military Attaché, Col. Voruz.
Asst. do., Commandant Cuny.
Naval Attaché, Commandant Donval.
Asst. Naval Attaché and Air Attaché, Capt.
Albertas.
Commercial Attaché, Vicomte du Halgouet.
Financial Attaché, M. Ruff.
Consul-General (attached to the Embassy), M. J.
Knecht.
Secretary Archivist, Comte La Combe.
Consulate General, 51 Bedford Square, W.C. 1.
Consul-General, M. Golan.
Consul at Liverpool, M. de Ledoux.

There are also Consuls at Manchester, Southampton, Newcastle-upon-Tyne, Cardiff, Glasgow, Dublin, and in Jersey.

The most westerly State of Central Europe, extending from 42° 20' to 52° 5' N lat., and from 7° 45' E. to 4° 45' W. long., bounded on the north by the English Channel and Straits of Dover (Pas de Calais), which separate it from England. Its circumference is estimated at about 3,000 miles, and its area (in 1914) at 207,076 square miles, divided into 87 départements, including the island of Corsica, in the Mediterranean, off the west coast of Italy. The territory ceded by the Treaty of Frankfurt (May 10, 1871) amounted to 5,622 square miles; that regained by the Treaty of Versailles (June 28, 1919) to 5,819 square miles, making the present area of France (exclusive of Algeria) 212,895 square miles, with a population (census of March, 1931) of 41,834,923 (inclusive of Alsace and Lorraine).

France has always been attractive to foreigners, of whom (1931) 2,890,893 were resident there, including (in 1921) 470,873 Italians, 415,546 Belgians, 303,141 Spanish, 55,456 British, 34,027 Russians, and 30,948 Americans.

GOVERNMENT.—The monarchical system of government was overthrown by the French Revolution (1789-1793), and the First Republic endured until the Great Napoleon (born Aug. 15, 1769, died May 5, 1821) founded the First Empire in 1804. The monarchy was restored in 1814, and also after the "Hundred Days" of Napoleon (March 20-June 20, 1815), until the Second Republic of 1848, which became the Second Empire on Nov. 22, 1852. On Sept. 4, 1870, the Emperor Napoleon III. (nephew of the Great Napoleon) was deposed, and the Third Republic was set up. The head of the Republic is the President, elected for 7 years by the National Assembly of the two houses of the Legislature, the Senate of 314 members (elected by indirect vote for 9 years, one-third being renewable every 3 years) and the Chamber of Deputies of 612 members (elected by direct vote for 4 years). Members of the legislature receive 62,000 francs a year and travelling facilities over the railways.

PRODUCTION.—The chief agricultural products are wheat, barley, rye, maize, oats, potatoes, beetroot (for the manufacture of sugar), hops, &c. Fruit trees abound, and are very productive, the principal being the olive, chestnut, walnut, almond, apple, pear, citron, fig, plum, &c. The agricultural production is shown in the following table:—

	Production (Metric Tons).	1929.
Wheat ..	8,705,000	6,291,000
Rye ..	1,002,000	750,000
Barley ..	1,285,000	1,000,000
Oats	5,744,000	4,400,000
Potatoes ..	13,429,000	14,000,000

Forestry is an important industry, the principal forests being those of the Ardennes, Compiègne, Fontainebleau, and Orléans, consisting chiefly of oak, birch, pine, beech, elm, chestnut and the cork-tree in the south. The vine is cultivated to a very great extent (224,243,000 gallons of wine were produced in 1930), as the names Bordeaux, Burgundy, Champagne, &c., universally testify; cider-making is also an important industry, and the production in 1929 amounted to 512,260,000 gallons. The live stock (1929) included 15,631,140 cattle, 10,451,700 sheep, and 6,101,810 pigs. The mineral resources include coal, pig iron, copper, lead, silver, antimony and salt. Under Article 50 of the Treaty of Versailles, the coalfields of the Saar Basin are ceded to France for 15 years, at the end of which time the inhabitants are to decide by a plebiscite whether they will remain French, return to Germany, or become a self-governing community. The coalfields abut on Lorraine, and have an area of 217 square miles, with a population of 640,000, and they include the towns of Saarbrück (60,000), Saarouis (26,000), and Merzig (10,000), on the River Saar. In 1921 the coal mines of France produced 30,000,000 tons, and the production of the enlarged area reached 55,000,000 tons of coal in 1930. The most important manufactures are of metals, watches, jewellery, cabinet-work, carving, pottery, glass, chemicals, dyeing, paper making, woollens, carpets, linen, silk and lace. Glass manufacture and pottery are also important.

and the sardine fisheries and the culture of oysters are a source of wealth.

DEFENCE.—The National Army of France consists of the Metropolitan Army, the Colonial Army, the Gendarmerie and Republican Guard, and of the partly native armies of Algeria, Morocco, and Tunis. The peacetime strength of the Metropolitan Army (1930-31) was 316,992 all ranks, including the (Military) Air Force (35,800). The Naval Air Force (for Coast Defence) is included in the Naval personnel. In the War of 1914-1918 over 80 per cent. of the French people were mobilised, and 9,717,000 all ranks passed into the Armies of France (exclusive of troops from Algeria, Tunis and Morocco). The French Navy was manned in 1930 by 57,413 officers and other ranks. For strength see Tables pp. 373 and 373.

ARMISTICE MONUMENT.—In the Forest of Compiègne is a *Carrefour de l'Armistice*, from which the *Clairière de la Victoire* leads to the Armistice Monument, unveiled Nov. 11, 1918. The monument marks the spot where the Germans signed the armistice terms presented by Marshal Foch, and bears the inscription *Ici le 11 Novembre 1918 succomba le criminel orgueil de l'Empire Allemand vaincu par les peuples libres qu'il prétendait asservir*.

EDUCATION.—The educational system is highly developed. *Central Administration* comprises (a) Ministry of Public Instruction; (b) Superior Educational Council, charged with the actual administration; (c) Consultative Committee (advisory); (d) Educational Bureaux and Inspecting Staffs, whose heads report direct to the Minister. *Local Administration* comprises (a) Territorial Academies, with inspecting staffs for all grades, and (b) Departmental Councils, presided over by the *préfet*, charged especially with primary education. By the Law of July, 1904, all congregational institutions are to be suppressed within 10 years, and many were at once closed, some re-opening under lay management. (i) *Primary* *Secular, comp and free*. Age 6-13. Schools include (a) infants, (b) lower primary; (c) higher do. Supplementary courses, and courses for adults. Lower and higher primary certificates granted. Numerous private courses are aided from local funds. Schools are for boys, for girls, or mixed. (ii.) *Secondary*: State lycées, communal colleges, and many private establishments, 7-yrs course, either (a) purely classical; (b) purely modern; (c) Latin and sciences; or (d) Latin and modern languages. Degree of Bachelor conferred on completion. For females, a similar organisation, course 5-6 yrs. *Sèvres* school and the Sorbonne Association well-known. (iii.) *Special Schools* are very numerous, many public institutions being dependent on ministries other than that of Public Instruction. (iv.) *Universities* (State universities alone grant degrees, but numerous private faculties and private institutions further higher education): Aix, Algiers, Besançon, Bordeaux, Caen, Clermont, Dijon, Grenoble, Lille, Lyon, Montpellier, Nancy, Paris, Poitiers, Reims, Strasbourg, and Toulouse.

COMMUNICATIONS.—The length of the *Routes Nationales* in 1928 was 24,426 miles. The principal rivers of France are the Seine, Loire, Garonne, and Rhône; the navigable waterways having a length of (1928) 6,204 miles. The system of railroads in France is very extensive; they are almost entirely *côncédés*, and become State property after the expiration of the concession. The length of lines of general

interest, inclusive of local lines, open for traffic on January 1, 1930, was 26,177 miles, of which over 750 miles are electrified. The length of telegraph wires (1929) was 221,427 miles, and of telephone lines 120,000 miles, with nearly 1,000,000 subscribers. In 1928 there were 642,744 private motor-cars registered in France, of which (1926) 541,438 were touring cars. Goods transport vehicles numbered 303,587, cycle-cars 27,450, motor-cycles 232,201, and motor-boats 3,312. In 1927 the passengers carried in civil aircraft numbered 12,857, the weight of cargoes being 1,644,000 lb. (exclusive of 276,000 lb of mails).

Shipping.—The gross tonnage of the French mercantile marine in 1930 was 3,530,879 gross tons, of which 146,911 tons were motor vessels and 60,288 tons were sailing ships. During the year 1931 the tonnage of French and foreign vessels entering French ports amounted to 57,677,000 tons, of which 14,662,000 tons were French; while the total clearings amounted to 48,267,000 tons, of which 12,128,000 tons were French. The chief ports are Marseilles, Cherbourg, Le Havre, Rouen, Bordeaux, Calais, Boulogne, and Dunkirk. A bill was passed by the Chamber in 1929 for the canalisation of the Rhone, which will make the river navigable for 1,200 ton vessels from the sea to Switzerland, and will also provide electric power and irrigation to the surrounding departments.

Alsace-Lorraine—High Commissioner, M. Mirhan (1920). Alsace-Lorraine, formerly a part of the Holy Roman Empire, was ceded to France in 1648 at the Peace of Westphalia, and was ceded to Germany by the Treaty of Frankfurt (May 10, 1871), after the Franco-Prussian War. At the close of the War, 1914-1918, the Provinces were regained by France under the Treaty of Versailles (June 28, 1919). They embrace the fertile plain between the Rhine and the Vosges, and stretch beyond these mountains as far as Luxembourg. Wine, tobacco, hops, iron, and coal are among the leading productions, and the cotton industry is most flourishing. The area is 5,605 square miles; the population in March, 1921, was 1,709,749. Principal towns, Strasbourg (pop. 181,465), Mulhouse (99,534), and Metz (58,767).

Algeria.—The three departments of Algeria—Algiers, Oran, and Constantine—form an integral part of France, under a Governor-General, assisted by a Consultative Council. These departments lie between 4° 36' W. to 6° 16' E. longitude, 37° 6' N. to an undetermined S. limit, about 30° N., covering an area estimated at 222,120 square miles, with a population (1931) of 6,553,451, of whom 920,788 were Europeans and 5,632,663 natives. The revenue in 1931 was estimated at francs 1,199,056,329, and the expenditure at francs 1,195,401,883. The bulk of the trade is with France, the exports to France amounting in 1929 to francs 2,023,723,000 (total exports fr. 4,036,599,000), and the imports from France to fr. 4,531,660,000 (total imports fr. 5,849,950,000). The exports consist mainly of wine, wheat and other cereals, sheep and oxen, skins, fruits, zinc

and iron ores, olive oil, phosphates, cork wood, esparto grass, manufactured tobacco, and vegetables. The principal imports from the U.K. were coal and patent fuel, machinery, cotton oil, cotton tissues, tin plates, clothing, and prepared skins. Iron, copper, quicksilver, zinc, and lead mines are being worked. In 1926 there were 2,666 miles of railroad open for traffic; and in 1928 the number of ships engaged in foreign trade entering Algerian ports was 4,322 of a net tonnage of 6,985,250 tons. The principal town is Algiers, the capital (municipal population, 1931, 257,122), a most important coaling station and much frequented as a health resort; other large towns are Oran (163,743), Constantine (104,902), Bona (68,778), Sidi-bel-Abbas (45,902), Phillipville (47,750), Mascara (31,449), and Tlemcen (46,060). Governor-General, M. Jules Carde (1930).

CAPITAL, Paris, on the Seine. Population (1931), 2,871,039, there are 82,127 houses and 1,149,366 families according to the census of March 1921. Fourteen other cities exceed 100,000—Marseilles 800,881, Lyons 579,763, Bordeaux 262,990, Nice 219,549, Lille 201,568, Toulouse 194,564, St. Etienne 191,088, Nantes 187,343, Strasbourg 181,465, Le Havre 165,076, Toulon 133,263, Rouen 122,957, Nancy 120,578, Roubaix 117,190, Clermont-Ferrand 103,743, Reims 122,820, Mulhouse, Limoges, Dijon, Grenoble, and Amiens exceed 90,000, and 34 others exceed 50,000.

FLAG: The "tricolour," three vertical bands, blue, white, red (blue next to flagstaff).

BRITISH CHAMBER OF COMMERCE, 6 Rue Halévy,
 Paris, IXème. President, H. C. Weiman.

There are also British Chambers of Commerce
 at 2, Rue Beauvau, *Marseilles*, and 4, Avenue
Massena, Nice.

Paris is distant from London 267 miles; transit,
 7 to 8 hours.

FRENCH COLONIES

Group.	Sq. Kilometres.	Population.
North Africa	3,770,000	13,000,000
Eastern Group	200,000	2,100,000
West Africa	7,640,000	10,350,000
America	100,000	500,000
Indian Ocean	640,000	5,000,000
Indo-Chinese	740,000	21,000,000
Pacific	20,000	100,000
Total ..	13,010,000	62,150,000

In ASIA—French India includes Pondicherry, on the Coromandel coast, Chandernagore, on the Hooghly; Karikal, in the Cauvery delta; Yanam, in the Godavery delta; and Mahé, on the Malabar coast—the total area being 200 square miles with an estimated population of (1922) 268,000. The trade of Pondicherry and Karikal in 1927 was valued at £268,229 for imports, £624,628 for exports, and £1,349,125 for re-exports. French Indo-China comprises the possession of Cochin-China and the four protectorates of Cambodia, Annam, Tonkin, and Laos. In 1892-3 the port of Kwang-Chow-Wan was also acquired on lease from China. The capital is Hanoi, in Tonkin, and the total area is 309,979 square miles, with a population (1922) estimated at 19,983,203, including the civil European population of about 17,500.

In ASIA MINOR.—The French mandatory sphere of Syria has a total area of about 150,000 square miles, with an estimated population of 4,500,000 (see also pp. 949-950).

In AFRICA.—Algeria (see above) is an integral part of France. Morocco (see pp. 928-929) is a French (and partly Spanish) protectorate.

Tunis has been a French protectorate since 1881. It lies between Algeria and Tripoli, and extends southwards to the Sahara, with a total area of about 45,000 sq. miles and a population (Census of 1921) of 2,410,692 (Europeans 195,293, including 91,427 French civilian population, 91,796 Italians). The valleys of the northern region support large flocks and herds, and contain rich agricultural areas, in which wheat, barley, and oats are grown. The vine and olive are extensively cultivated. The principal minerals are coal, copper, lead, zinc and iron, and phosphates and marble are also worked. The chief exports are phosphates, olive oil, wheat, esparto grass, barley, beans, blankets, sponges, and dates; the chief imports are textiles and other manufactures, iron, steel, machinery and provisions. Eighty per cent. of the trade is with France and Algeria. In 1920 the imports were valued at 2,107,455,000 francs and the exports at 1,127,233,000 francs. Tunis, the capital, has a municipal population of 202,405 at the Census of 1921; other towns are Sfax (30,970), Bizerta (23,206), Susa (25,324), and Kairwan (27,532). *French West Africa* extends from Mauritania to Dahomey, and has a total area of 1,509,733 square miles, and a population of 13,500,000. It consists of *Senegal* (74,000 sq. miles, pop. 1,250,500), capital, St. Louis; the trade of Senegal in 1920 was francs 866,000,000 imports, and francs 668,700,000 exports, the principal export being ground nuts. *Upper Senegal Niger* (304,000 sq. miles), and the *Niger Military Territory* (533,000 sq. miles), which have a total population of about 6,036,200; *French Guinea* (92,500 sq. miles, pop. 1,737,350); *Ivory Coast* (126,100 sq. miles, pop. 1,216,300); and *Dahomey* (38,000 sq. miles, pop. 876,500), adjoining Dahomey is the French Sphere of the former German colony of *Togoland* (23,400 sq. miles, pop. 800,000); while the hinterland of these colonies forms the *French Sahara*, which has an estimated area of 924,100 sq. miles and a population of about 450,000. *French Equatorial Africa* consists of the *French Congo* (573,000 sq. miles, pop. 9,000,000) and of the French Sphere in the former German territory of *Cameroun* (267,000 sq. miles, pop. 2,750,000). *French East Africa* consists of the *Somali Coast* (46,300 sq. miles, pop. 208,000) and of the large island of *Madagascar* (226,000 sq. miles, pop. 2,253,500) with its dependencies (Nossi Bé, Sainte Marie, Réunion, and the Mayotte-Comoro Islands, and St. Paul, Amsterdam, and Kerguelen Islands). Agriculture and cattle raising are the principal industries; the minerals include gold, silver, iron, copper, lead, and zinc. The chief exports are gold, cattle, bark, manioc (for arrowroot), beans, hides, skins, fibre, rice, timber and rubber; the chief imports are cottons, metal manufactures, wines and spirits, coal, clothing, lime and cement. The capital, Antananarivo, has a population of 75,000; other towns are Tamatave (the chief port), Majunga, Diego-Suarez, Mananjary, Tuléar, Andoveranto and Vohémar. Off the south-east coast are the uninhabited islands of St. Paul, Kerguelen and Amsterdam. There is now direct communication across French and British territory in Africa, with posts on the Atlantic and Indian ocean.

In **AMERICA**.—Off the south-east coast of Newfoundland are two small groups of islands, of which the largest are St. Pierre and Miquelon. In the West Indies, Martinique and Guadeloupe, with Reunion, Marie Galante, Ile des Saintes,

Petite Terre, St. Bartholomew, and St. Martin; and in South America, Cayenne or French Guiana. Included in Cayenne is a group of islands (St. Joseph, Ile Royal, and Ile du Diable) known as Ile du Salut. On *Devil's Isle* Major Dreyfus was imprisoned from 1894-1899. The total area of French possessions in North and South America is 35,320 square miles, with a population of 428,850.

In **OCEANIA**.—New Caledonia (7,200 sq. ma., pop. 50,500) is a large island with dependencies, the Isle of Pines, the Wallis Archipelago, the Loyalty Islands (Mahé, Lifou, Uvée, &c.), the Huon Islands, and Futuna and Alofi. The Society Islands (Tahiti, Moorea, &c.) have an area of about 650 square miles, and a population of about 14,000; the Marquesas (Nukahiva, Hivasa, &c.) 500 sq. miles, pop. 2,500. Leeward Isles (Huahine, Raiatea, Tahaa, Bora-Bora, Maupiti, &c.); the Gambier Islands (Mangareva, &c.), the Tubuai Islands (Rurutu, Raiavae, Rimatava, &c.); Rapa Island; Makatea; and Maiao Island. The New Hebrides are under joint Franco-British administration.

GERMANY.

(Deutsches Reich.)

President of the German Reich, General Field-Marshal Paul von Hindenburg, born Oct 2, 1847, re-elected April 10, 1922.

MINISTRY (June 2, 1922).

Chancellor, Herr von Papen.

Foreign Affairs, Freiherr von Neurath.

Interior, Freiherr von Gayl.

Labour, Dr. Schaeffer.

Finance, Count Schwerin von Krosigk.

Agriculture and Food, Freiherr von Braun.

Justice, Dr. Gurtner.

Defence, General von Schleicher.

Posts and Communications, Freiherr von Eitz-Rubenach.

Economy, Prof. Warmbold.

Ambassador in London, Herr von Hoesch.

9 Carlton House Terrace, S.W. 1.

Consular Dept. of the Embassy, 9 Carlton House Terrace, S.W. 1.

AREA AND POPULATION.—The area of Germany is approximately 182,200 square miles, as against 208,800 square miles in 1914. By the *Treaty of Versailles* the "Reichsland" of Elsass-Lothringen and the Saar coal basin (temporarily) were ceded to France; parts of Posen and West Prussia to the newly-formed Republic of Poland; North Schleswig to Denmark; and Moresnet and Malmédy to Belgium. Danzig and territory became a Free State, represented in its foreign affairs by Poland. After a plebiscite, part of Upper Silesia passed to Poland. Memel and district went to Lithuania. The Colonies, which had extended over 1,035,086 sq. miles in Africa, 96,210 sq. miles in the Pacific, and 2,943 sq. miles in Asia—a total of 1,134,239 sq. miles, with a population estimated in 1914 at 25,000,000—were renounced, and the delegates to the International Council at Paris allocated Togoland and Kamerun to Great Britain and France; German East Africa to Great Britain; German S.W. Africa to the Union of South Africa; the German Pacific possessions N. of the Equator to Japan, and those S. of the Equator to Australia and New Zealand. The population on June 16, 1925, was 62,592,573 (without Saar district), of whom

30,196,421 were males and 32,396,154 were females. The population on Dec. 1, 1920, was 54,025,993. Births in 1921 numbered 1,021,908, and deaths 725,983, births being 16'0 per 1,000 of population, deaths 11'2 per thousand. Religious confessions in the present area were in 1925:—Protestants 40,024,677, Roman Catholics 20,193,334, Jews 564,379, others 7,638,229. On June 16, 1925, 41'4 per cent. of all persons with earning occupations were engaged in industry, 30'5 per cent. in agriculture, 16'5 per cent. in trade and communications, 4'7 per cent. in the public services and the professions, 1'8 per cent. in the health services, and 5'1 per cent. in domestic service. There are 50 large towns with over 100,000 inhabitants, with a population of 19,624,000, or 30'1 per cent. of the total population.

NATURAL RESOURCES.—Forests cover 22,769,092 hectares, consisting to about three-quarters of coniferous trees, and are the basis of a flourishing wood and wood-products industry. Although a great part of North Germany is sandy and infertile, natural conditions in general favour Agriculture. Grown are rye, wheat, spelt, oats, barley, buckwheat, maize, potatoes, beans, leguminous and root plants, including sugar-beet, hops, vegetables, fruits, vines, flax, hemp, rape, and tobacco. The livestock and dairy-fung industries have attained a high degree of perfection. Mineral wealth includes coal, iron, manganese, copper, lead, zinc, tin, nickel, quicksilver, gold, silver, sulphur, antimony, cobalt, arsenic, bismuth, wolfram, uranium, graphite, alum, boracite, pyrites, petroleum, potash, amber, semi-precious stones, and china clay, and salt, brine-springs, and medicinal waters are abundant. The mine-iron mines of Lorraine were lost by the Peace Treaty of 1919, and as the remaining iron ore is insufficient and in part technically unsatisfactory Germany is largely dependent upon import of iron ore.

CONSTITUTION AND POLITICS.—At the outbreak of war, Aug. 1914, Germany was a Confederate League, bearing the name "German Empire," under the hereditary presidency of the King of Prussia, holding the title of "German Emperor." On Nov. 9, 1918, the German Emperor abdicated, and the Government of the country was taken over by the Council of the People's Commissioners in Berlin. In Jan. 1920, elections were held to a National Assembly on the basis of universal adult suffrage (male and female). Under the new Constitution of August 11, 1920, the federal legislature consists of a *Reichstag* representing the whole nation and elected by popular suffrage (male and female), with proportional representation, and a *Reichsrat* representing the separate states. Ministries are dependent upon the support of parliamentary majorities. The people possess the right of initiative and the referendum. Bills dealing with economic questions or social issues arising thereout must first be submitted to an advisory Economic Council (*Reichswirtschaftsrat*).

Between the Revolution of 1918 and 1932, the government of Germany and of most of the states was almost continuously conducted by Cabinets supported by the middle and moderate-left parliamentary parties, of which the Social-Democrats and the Catholic Centre were the largest. The extreme Conservative-Nationalist parties and the Communists were in opposition.

Successive elections practically obliterated the moderate-Conservative People's Party and the Democrats, while the Centre and Social-Democrats remained relatively stable, and the Communists gained. Largely at the expense of the middle parties, the National-Socialist (Hitlerite) party rapidly increased, gaining great successes at the Reichstag Election of Sept. 1920, and becoming the strongest party through the election of July, 1932. The main party composition of this Reichstag, of 607 members, was: National-Socialists 230, Social-Democrats 123, Communists 89, Centre 75, German-Nationals 37. The Election followed the dissolution of the Reichstag by the Cabinet of Herr von Papen, which had displaced the Brüning Cabinet in June. In August, 1932, the National-Socialists demanded exclusive power, but received a refusal from the President. The Papen Cabinet remained in office without other party support than that of the German-Nationals; and under Article 48 of the Constitution decreed many drastic measures, including the expulsion from office under a form of martial law of the Prussian Socialist-Centre Cabinet, and a scheme for trade revival, chief features of which were the subsidising of industry out of public funds, and wage reductions. Democratic and Socialist officials were dismissed. The Cabinet proclaimed against party government, promised a revision in Conservative direction of the Constitution, and in social and cultural domains sought to reverse post-war progressive policies. On Sept. 12, 1932, the Reichstag elected on July 1 was dissolved on the ground that it intended to revoke a Government emergency decree, and a Constitutional conflict resulted.

EDUCATION.—Education is in the competence of the states, and according to the Constitution is in principal compulsory until the eighteenth year, but this principle is not uniformly in force. Public elementary schools number (census of 1926 27) 52,785, whereof 28,821 evangelical, 25,221 Catholic, and 8,550 mixed, with 6,661,794 pupils. Intermediate schools (9 to 10 years' courses) number 1,548, with 259,290 pupils, continuation and special occupational schools, 29,652, with 2,507,000 pupils, superior schools (between elementary-intermediate school class and universities), 2,828, with 822,600 pupils. For higher education are 23 universities, also high schools: 10 technical, 3 forestry, 4 agricultural, a veterinary, a mining, 5 commercial, 7 pedagogic, and 11 philosophic-theological, with (1928) 122,300 students, whereof 13,100 women. There are 14 high schools and academies for the graphic arts, and 13 high schools and academies for music.

DEFENCE.—By Article 160 of the Treaty at Versailles the German Military Forces, as from March 31, 1920, must not comprise more than seven divisions of infantry and three divisions of cavalry, a total force of 100,000 all ranks. By Article 182 of the Treaty, the German Naval Forces must not exceed 6 battleships of the Deutschland or Lothringen class, 6 light cruisers, 12 destroyers, and 12 torpedo boats. No submarine vessels are to be included in the naval forces, and all war vessels in excess of the above numbers were to be broken up or devoted to commercial purposes. Under the Armistice of Nov. 11, 1918, the German High Sea Fleet surrendered to the Allies (Nov. 21, 1918), and was interned in Scapa Flow, where it was

scuttled by its crews. By Article 198 of the Treaty the armed forces of Germany must not include any military or naval *Air Forces*, and no dirigible balloons, aeroplanes, sea-planes or flying boats. In September, 1923, in a Note to France, Germany claimed equality in armaments with other Powers, and received a reply referring her to the League of Nations.

COMMUNICATIONS.—The total length of the full-gauge *Railroads* at end of 1929 was 56,436 kilometres, of which all except 3,761 kilometres belonged to the German Railroads Corporation, which under the *Dawes Reparation Scheme* of 1924 acquired all the lines taken over by the Republic from the states in 1921. In addition there were 1,757 kilometres of narrow-gauge railroads. The number of registered automobiles (July 1, 1932) was 497,300, motor cycles 819,300, and motor lorries 152,400. Length of *Telegraph and Telephone Lines* 328,100 kilometres; telegrams transmitted, (1930) 33,900,000; post, telegraph, and telephone offices, 58,440; telephone subscribers, 3,247,000; letters carried, 5,700 millions, value of cash-on-delivery orders, 3,498 mill. m.; money orders, 3,929 mill. m. The number of employees in the service of posts, telegraphs, and telephones was 378,198. In addition to some 6,000 miles of navigable rivers there are over 1,500 miles of canals and 1,600 miles of ship canals. On January 1, 1932, the Mercantile Marine consisted of 2,098 sea-going steamers of 17'65 register tons and upwards (4,380,348 tons gross register), and of 2,420 sailing vessels (447,870 tons gross register); number of seamen, 77,746. As a result of the War and of the Peace Treaty shipping in 1919 sank to 419,000 tons, but there has since been a rapid recovery, due mainly to native building, but partly to purchases from abroad. Finished new constructions of vessels exceeding 100 gross tons were in 1919, 134,535 tons, 1927, 261,105 tons, 1929, 357,600 tons; 1931, 176,755 tons. On Jan. 1, 1930, shipping had increased to 4,242,000 gross tons. Recovery was helped by the establishment of eleven new yards during the War. The chief ports of Germany are Hamburg, on the Elbe, Bremen, on the Weser; Stettin, on the Oder; Königsberg, on the Pregel; Kiel, on the Baltic; Emden on the Ems, and Lübeck, on the Baltic. Traffic in the chief ports has increased since the War at a great rate, and now exceeds that of 1913. Arrivals at all ports were: 1913, 34,396,691 net tons; 1931, 40,395,600 net tons. Traffic in the *Kiel Canal* in 1930 was vessels 53,541, net tonnage 22,026,866.

SOCIAL INSURANCE.—The German scheme of social legislation gives all subordinate bread-winners in Germany a legal right to pecuniary subvention when unfitted for work through sickness, accident, premature infirmity, or old age. Insurance is compulsory. This National Insurance is based on mutual insurance and self-administration. The Infirmary Insurance Act came into force Jan. 1, 1900. The insured include all persons working for wages or salary as workpeople, artisans, journeymen, apprentices, domestic servants, laundresses, dressmakers, sempstresses, housekeepers, charwomen; overseers, foremen, engineers, assistants, clerks and apprentices in merchants' offices, schoolmasters, schoolmistresses, tutors and governesses, including foreigners working in Germany under these categories. Pensions for premature infirmity are given to insured persons when unfit for work; old age pensions to all insured persons on attaining the age of 70, though

still capable of work. A comprehensive project of reform of the State insurance legislation became law in 1911. The new law codified previous legislation, established new Insurance Authorities, reduced working-class influence in the Accident Insurance organisations, provided pensions for widows and orphans, and made other changes of importance. Another Bill extending Insurance benefits to private officials, clerical employees and others above the class of manual workers, became law in 1911. A law establishing Federal Unemployment Insurance for all persons subject to Sickness Insurance and also for seamen, which is financed by equal contributions from employers and employed, came into force on Oct. 1, 1927. During the industrial depression 1930-32 Social Insurance finance suffered badly owing to the decline in receipts and the increase in cost of unemployment relief. Premiums were correspondingly increased and benefits reduced. In Sept. 1932 the Cabinet received from the President authority to amend the whole Social Insurance system without parliamentary sanction.

PUBLIC FINANCES.—The state financial structure was radically altered after the War. The Reich appropriated the chief direct taxes, including income tax, which had formerly been collected by the states and municipalities; and the states lost the profits from their railways, which were taken over by the Reich. The Reich was thereby compelled to contribute to the state and municipal revenues, mainly out of the yield of income and turnover taxes. The financial relations between Reich and states became a matter of dispute, but the promised definitive regulation has not been effected. Between 1928 and 1924 all public budgets were in confusion in consequence of the currency depreciation. The currency reform of Nov. 1923 reacted favourably on Finance, and the Reich Budget of 1924-25 was balanced. The Reich was materially relieved by the automatic wiping-out of the internal Debt by currency depreciation. Under a later valorisation law, holders of public loans were partially compensated, getting 12½ per cent. of the original gold value when they had acquired before July, 1920, and 2½ per cent. when they had acquired later, but no interest was to be paid to the latter class of holders until the Reparations liability had been discharged. After 1926-27 Reich budgets again showed deficits. In consequence of declining revenue due to the trade depression and to the accompanying heavy unemployment relief burden, much larger Reich deficits, and serious difficulties in balancing other public budgets, were experienced after 1929. The *Budget Estimates* for 1932-33 (in which are not included the separately financed Railways and Posts) were:—

	1,000,000 Reichs marks.
Revenue	8,219
Expenditure	8,219

The German Debt

The long and short term *Debt* of the Republic on May 31, 1932, totalled 11,753 million Reichsmarks. Of this sum 734 million marks represented the outstanding liability on the Reparations Foreign Loan of (nominally) 800 million marks, 3,940 million marks represented the depreciated paper mark pre-war and war debts as valorised under the law of July 16, 1925, and

1,426 million marks the international 5½ per cent. (Young Plan) loan of 1932.

The suspension of Reparation payments at the initiative of President Hoover from July 1, 1931 on, materially relieved the Reich Budget. The amount of the reparations due by Germany under the Treaty was fixed in January, 1921 (by the Financial Council of the Allies at Brussels) at 132 milliard of gold marks (£6,600,000,000) payable in bonds, to be redeemed by annual payments of 2 milliard gold marks, together with a sum equivalent to 26 per cent. of German exports. A new *Reparations Scheme* was agreed to by Germany and the Allies in August, 1924, providing for annual payments rising to 2,500 million gold marks, liable to increase according to an index of prosperity, the money to be supplied from (1) taxation, (2) railway bonds, and (3) bonds imposed on private industry. In 1930, by an agreement come to at the Hague, Reparations were again revised. Germany agreed to pay during a term of 37 years annuities averaging 1,989 million marks, and thereafter until 1987-88 annuities varying between 1,721 million and 898 million marks. Under a further agreement, concluded at Lausanne in July, 1932, Reparation annuities were abolished. Germany undertook to hand over to the creditors 3,000 million marks of 5 per cent. bonds, to be marketed as soon as an issue price of 90 became practicable, but not before three years or after fifteen years. The creditor Governments agreed between themselves to ratify the Lausanne Agreement only if a satisfactory settlement of other international War Debts was attained.

FOREIGN DEBTS.—A short-term foreign debts crisis began in July, 1931, owing to sudden withdrawals of credits to German banks, for which the Reichsbank was unable to deliver gold or exchange. Under a "standstill agreement" of February, 1932, Germany was protected against any further substantial withdrawals of credits until March, 1933, but she must pay and transfer the interest thereon. In 1932, owing to the depletion of the Reichsbank's reserves, ability to transfer interest and amortisation instalments on the long-term debt was cast into doubt, and suggestions were made for interest reductions. A Government census for February 29, 1932, shows public and private indebtedness to abroad at 20,623 million marks, whereof 10,153 millions short-term (maturing before March, 1933), and 10,470 millions long-term. In addition were foreign claims in the shape of holdings of German domestic securities and real property, which bring the total indebtedness to an estimated 25½-26½ milliard marks. Of the 20,623 millions debt proper, 3,125 millions were liabilities of the Reich (mainly Dawes and Young loans), 1,215 state and municipal debts, 6,706 millions bank debts, and 8,785 millions debts by Agriculture, Industry and Communications. The chief creditor countries were:

	Total (Long-Term Marks)	Whereof Long-Term Marks
U.S.A.	8,329,000,000	5,165,000,000
Netherlands	3,575,000,000	2,914,000,000
Switzerland	2,701,000,000	1,146,000,000
Great Britain	2,415,000,000	1,129,000,000
France	956,000,000	482,000,000

The annual cost of service of the foreign debt (in the 12 months ending March, 1933) is returned at 1,438 million marks, whereof 1,225

millions for interest and 213 millions for regular amortisation. Including certain capital repayments of non-recurring kind, the debt-service liability to abroad in the 12 months is approximately 1,700 million marks.

CURRENCY AND CREDIT.—In 1919-22 the mark currency rapidly depreciated. In November, 1923, was put through a *Currency Reform*, consisting in the creation of a *renten-mark*, nominally worth 1 gold mark, and in the stabilisation of the depreciated paper-mark at 1 billion paper-marks to 1 gold mark. The stabilised paper mark notes have since been withdrawn from circulation, and the *renten-marks* are being gradually replaced by *reichsmarks* of pre-war gold value, issued by the Reichsbank as reconstituted under the Reparations settlement of 1924. Currency conditions were satisfactory until the debt-withdrawal crisis of July, 1931, which led to a suspension of internal gold payments, and to the subjection of payments to abroad to official restriction. Foreign currency in German hands was expropriated against compensation in *reichsmarks*. By these means the stability of the *reichsmark* at gold parity was maintained; but the Reichsbank's reserves (gold and foreign exchange) fell between May, 1931, and September, 1932, from 2,576 to 925 million marks, and legal cover for circulation to 25 per cent. (normal legal minimum, 40 per cent.) Owing to the foreign and home run, the Darmstädter-und-National and some other banks failed. By emergency decrees the Government directionally regulated credit, and attained in banking a dominant position. The effect of the credit crisis on industry and trade was less serious than anticipated, and in 1932 confidence began to return, but payments to abroad remained subject to official sanction. Bank uptakes, after reaching a maximum of 1,425 in October, 1931, declined in August, 1932, to 499, and the number of bill protests fell in the same period to one fifth. The internal value of the currency increased, the wholesale-prices index falling from 121.6 in July, 1928, to 95.6 in September, 1932, the cost-of-living index from 156.5 in March, 1929, to 120.3 in August, 1932.

EMPLOYMENT.—Employment is subject to sharp seasonal fluctuations, being lowest in the summer and highest in the late winter. In 1922, under the influence of the inflation-activity of industry, the number of unemployed fell to 16,000. After the currency stabilisation, unemployment in general increased, but in the prosperous year 1927 fell to 250,000, after which a new increase followed. In February, 1930, were 3,366,000 unemployed; February, 1931, 4,971,000; February, 1932, 6,128,000; September, 1932, 5,100,000. In the autumn of 1932 signs of improvement were discerned.

AGRICULTURE.—Agriculture is the leading German occupation. The cultivated area in 1922 (omitting forests) was 29,369,576 hectares, of which 4,450,122 h. were rye, 2,280,351 h. wheat, 3,284,524 h. oats, 1,568,210 h. barley, 1,079,032 h. potatoes, and 276,665 h. sugar-beet. The meadow area was 5,501,294 h. Owing to high wheat duties and other protective measures, the area under and yield of wheat has greatly increased, whereas cultivation of rye has declined. As against an average wheat crop of 3,700,000 metric tons in 1911-14 (on the present area), the estimated crop of 1932 was 5,100,000 tons; and

in wheat Germany is now self-sufficing, and may have an exportable surplus. Area under orchards is (1932) 53,139 h., vineyards 82,781 h. The area under flax, hemp, and other industrial plants is smaller than in 1913. The livestock census of Dec. 1930 showed: horses 3,521,530, cattle 18,470,390 pigs 23,440,460, sheep 3,504,355. Agriculture has been financially weakened by the price-fall, and has debts totalling 12,500 million m.

INDUSTRY.—Industry is highly developed in all the larger German states Prussia leads in coal-mining, iron and steel, metalwares, machinery, and electro-technical articles, but manufactures comprise practically all branches. The cotton works are extensive, and there are numerous manufactories of silk, mixed cotton and linen fabrics, including shawls, carpets, &c., and woollens, with leather, earthenware, glass, paper, and tobacco manufactures, as well as chemicals and brewing. Bavaria produces machinery, jewellery, scientific instruments, pottery, wood-products, paper, leather, textiles, and beer. Special manufactures of Saxony are machinery, yarns and cloth, knitted goods, hosiery, furs, pottery, glass, and musical instruments. Württemberg has manufactures of textiles, paper, leather, firearms, clocks, and tobacco; Baden of chemicals, jewellery, and cigars. The toys industry of Thuringia is important.

Intense industrial activity prevailed during the inflation years 1919-23, and after a reaction a new high level was reached in 1927, after which production in the finishing branches somewhat declined, while the heavy branches, including iron and steel, enjoyed prosperity throughout 1928 and 1929. In 1930, under the influence of the world-depression, a rapid decline in the output of all branches began. At the beginning of 1932, current industrial production was 40.9 per cent. below that of the last prosperity year, the decline for steel being 60.8 per cent., machinery 57.5 per cent., motor-cars 38.5 per cent., pottery 55.7 per cent., paper 25.5 per cent., finished textiles 31.9 per cent., footwear 18 per cent. The production decline in the heavy industries was very great.

	1931	1927
	Metric Tons.	Metric Tons.
Coal	118,624,200	153,597,600
Pig-iron	6,063,100	13,102,500
Ingot steel	8,221,300	16,305,300

The financial stability of industry was badly shaken by three years of trading losses, and numerous companies were obliged to reduce their capital in order to restore equilibrium to their balance sheets. A revival of industry, particularly in the consumption-goods branches, set in in September, 1932.

FOREIGN TRADE.—Foreign-trade policy has been increasingly Protectionist. Immediately after the War, import duties on many articles were sharply raised; and in 1925 a new part tariff increased the duties on numerous industrial articles, and restored the foodstuffs duties, which had been suspended in August, 1924. A Bill reducing duties, drafted in accord with the recommendations of the Geneva Economic Congress of 1927, was dropped; the duties on foodstuffs were repeatedly raised, and supplemented by compulsion to mill native grain; and in 1932 duties on numerous agricultural and industrial products (including English

yarns) were heavily increased, and the introduction of import-quotas for certain agricultural products was announced.

Germany's chief imports, in order of value, 1931, are: oil-fruits, fruit, cotton, wool, dairy products, yarns, mineral oils, coffee, fodder, hides, eggs, cloth, tobacco, copper, furs, iron-ore, bread-cereals, and wood. Chief exports: heavy iron and steel goods, textiles and clothing, machinery, chemicals and dyes, electrical apparatus, non-ferrous metal-ware, paper and wares thereout, leather and wares thereout. In 1932 Russia displaced Great Britain and Holland as Germany's chief customer.

The foreign-trade balance was increasingly passive until 1927, whereafter import surpluses declined. Equilibrium was reached in 1929. The years 1930 and 1931 witnessed large and increasing credit-balances, causes being the cessation of active-financed import, the reduced demand, owing to the depression, for foreign raw materials, the increasing independence of foreign foodstuffs, and the repayments of foreign debt. The years 1927-31 witnessed a shift of £300,000,000 from the passive to the active side of the trade balance. The movement of imports and exports (including Reparation deliveries in kind) was—

	Imports.	Exports.
	Marks.	Marks.
1927 ..	14,228,000,000	10,801,000,000

	Marks.	Marks.
Imports from ...	639,000,000	453,000,000
Exports to . . .	1,219,000,000	1,134,000,000

In the first half of 1932 import was 2,387 mill. m., export 2,989 mill. m.

SECURITIES MARKETS.—All stock exchanges were closed between July 11 and Sept. 3, 1932, and between Sept. 18, 1931, and April 12, 1932. The official securities index, based on 100 for average quotations of 1924-26, showed for Sept. 3, 1932 for stocks, 56.67; for fixed-interest securities, 63.62.

FEDERATED STATES.

PRUSSIA MINISTRY.

(On the ground of alleged failure of duty towards the Reich, "Reich Exemption" was proclaimed against Prussia on July 20, 1932. The Prussian Cabinet of Herr Braun was expelled from office, and the Reich Chancellor was appointed Prussian Commissioner.)

The Republic of Prussia comprises the larger portion of Germany, with a total area in 1924 of 123,750 sq. miles and a population on June 16, 1925, of 38,120,173 (Saar district excluded).

The number of births in 1931 was 634,593, against 1,209,500 in 1913. The number of deaths in 1931 was 440,795, against 656,490 in 1913. Marriages were 325,080, against 323,709.

	1,000,000 Reich-marks.
Budget (net), 1932-33	2,024
Debt	894

The whole of the old *Funded* Debt of Prussia was taken over by the Republic under the

arrangement for transfer of the Prussian State Railways.

CAPITAL, Berlin, on the Spree. In 1920, by fusion of suburban municipalities and of some adjacent rural communes, was created Great Berlin with a population on June 16, 1925, of 4,012,588.

Other largest cities are Cologne, on the Rhine (698,064), Breslau, on the Oder (554,801), Essen, on the Ruhr (468,666), Frankfurt, on the Main (461,849), Düsseldorf, on the Rhine (431,096), Hannover, on the Leine (422,435), and Dortmund, on the Emscher (320,256).

BAVARIA.

Minister-President, Dr. Held.

The Republic of Bavaria is divided into two unequal parts. The eastern portion, comprising eleven-twelfths of the whole, is situated between 47° 16'—50° 34' N. lat. and 9° 01'—13° 50' E. long.; the western part, forming the Palatinate, on the left bank of the Rhine. The total area is 29,486 sq. miles, and the population on June 16, 1925, 7,411,589. The Thuringian Duchy of Coburg was incorporated in Bavaria in 1921.

Naval and Air Attaché (vacant).

Vice-Consul (in charge of *Consulate-General*),
George Seferiadis, 131 Gower Street, W.C. 1.

A maritime Republic in the south-east of Europe, bounded on the N by Albania, Yugoslavia and Bulgaria, on the S. and W. by the Ionian Sea, and on the E. by the Aegean and Turkey, with an estimated area of 50,271 sq. miles and a population (census of May 15, 1928) of 6,204,684.

Government.—Greece became independent in 1830, after a successful insurrection against the Turkish government, to which the country had been subjected since the 15th century, and after a succession of rulers of the Glucksburg dynasty was declared a Republic by the Constituent Assembly on March 25, 1924. The legislature consists of a Senate of 120 members, and of a Chamber of Deputies (or *Bouli*) of 250 members, elected for 3 years by universal manhood suffrage.

Prior to the Balkan Wars of 1912-13 the area was less than 25,000 sq. miles, the addition of portions of Macedonia and Epirus, Crete (2,950 sq. miles, pop. 336,151), and certain Aegean Islands increasing the area to 43,522 sq. miles. During the War of 1914-1918 Greece eventually declared for the Allies against the Central Powers, and her territories were increased by the occupation of Thrace (including the monastic republic of Mount Athos), and the islands of Imbros and Tenedos. Under an arrangement with Italy, to come into effect after the ratification of the Treaty of Stres, Rhodes, Aege, and the Dodecanese (12 islands) were surrendered by Turkey, and these were to be handed over to Greece by Italy. Greece also received under the Treaty a mandate for the occupation and administration of the town and district of Smyrna but military operations by forces of the Angora Government, under Mustapha Kemal Pasha, recovered the mandated region in Sept. 1922, the Greek forces being annihilated, and Smyrna was evacuated on Sept. 8, 1922, and that part of the Greek population of Asia Minor which escaped massacre by the Turks took

refuge in Greece. By the Treaty of Lausanne (1923) Greece lost Eastern Thrace (that part lying E. of the Maritza river) and the islands of Imbros and Tenedos, which were retroceded to Turkey. The country is thus composed of a continental portion (the southern part of the Balkan Peninsula), and of islands in the Aegean, Mediterranean, and Ionian Seas. The surface is nearly all mountainous; the coasts are elevated, irregular, and deeply indented.

Production.—Agriculture is the principal industry and employs more than half the population. The most important of the fruit trees are the olive, the vine, orange, lemon, fig, almond, citron, pomegranate, and currant-vine. The principal minerals are silver, lead, zinc, emery, copper, magnesium, sulphur, salt, and marble. The chief manufactures are smelting, textiles, and shipbuilding. The imports are cotton and other manufactures, corn, timber, cattle, hides, sugar, salt fish, and coal. The exports consist of wine, olives, olive oil, tobacco, currants, figs, cognac, hides, lead, iron ore, magnesite, iron pyrites, chrome ore, emery, marble, sponges and carpets.

Defence.—Service in the Army is universal and compulsory between the ages of 21 and 57. Both the land and sea forces were reorganised during the War of 1914-1918, and about 150,000 all ranks fought with the Allied Armies. The Navy consists of 1 armoured cruiser, 1 cruiser minelayer, 4 modern t-b-d, 7 torpedo-boats, and 6 submarines with 5 patrol vessels (small torpedo boats).

Education is free and compulsory, maintained by local taxation supplemented by State grants. Secondary education is somewhat backward, particularly in the country districts. The University at Athens is of some repute.

Finance.—The debt in 1922 was 1,040,900,000 drachmae, and the Balkan Wars of 1912-13 added 354,960,000 drachmae, the Great War added 1,028,000,000 drachmae, and subsequent military operations to March, 1921, were responsible for 1,776,140,000 drachmae. On Dec. 31, 1930, the total was stated at £40,837,922.941 drachmae, requiring 3,728,861,412 drachmae for debt service in the budget of 1930-31.

Communications.—There were (1928) 1,993 miles of railroad open for traffic. There is a ship canal cutting through the Isthmus of Corinth for ships up to 1,500 tons. The post offices number 1,146, telegraphs, 4,960 miles. The mercantile marine consists (1931) of 547 steamships (1,407,808 tons) and 729 sailing ships (58,508 tons). The principal harbours are the Piræus (port of Athens), Syra, Patrae, Salonica, Volo, Corfu, Calamata, Laurium, Cavalla, and Canea (Crete).

Budget, 1931-32.

Total estimated receipts	Drachmae 10,240,512,053

President (1931-1935), General Jorge Ubico,

assumed office Feb. 14, 1931.

Minister of Foreign Affairs, Señor Don Alfredo

Skinnei Klée.

Minister in London (vacant).

Charge d'Affaires and Consul-General in London,

Señor Dr. Don Francisco A. Figueroa, 444

Mansion House Chambers, 22 Queen Victoria

Street, E.C. 4.

Guatemala, the most northerly of the Repub-

lican States of Central America, is situated in N.

lat. from 13° 45' to 17° 49', and in W. Long. from

88° 22' 49" to 92° 13' 43' and comprises an area of

42,456 square miles, and a population in 1927 of

1,600,535. The Republic is divided into 22 depart-

ments, and is traversed from W. to E. by an

elevated mountain chain, containing several

volcanic summits rising to 23,000 feet above the

sea; earthquakes are frequent, and the capital

(which is at an altitude of 4,800 ft.) was

destroyed by an upheaval in Jan., 1928. The

country is well watered by numerous rivers; the

climate is hot and somewhat malarious near the coast, but very temperate and healthy in the higher regions. About 600 miles of railway were open for traffic in 1930. There were 4,267 miles of telegraph working in 1925. The chief ports are San José de Guatemala and Champerico on the Pacific, and Livingston and Puerto Barrios on the Atlantic side. The principal export is coffee, other articles being bananas, sugar, timber, *chicle* (chewing gum), hides and beans. Spanish is the language of the country.

HAITI.

(République d'Haïti.)

President, Stenio Vincent, assumed office Nov. 28,

1930.

Foreign Affairs, M. Albert Blanchet.

Minister in London, Dr. Louis Baron.

Consul, W. Haines, 4, Denmark Street, W.C.2.

The Republic of Haiti is the western or French

portion of the island of San Domingo, which,

next to Cuba, is the largest of the "West India"

Islands. Formerly a French colony it was

proclaimed independent on Jan. 1, 1804, and is

governed under a Constitution ratified on

June 22, 1928. The legislature consists of a

Senate and a Chamber of Deputies. The

President is elected by the legislature for a

period of six years. In 1925 a treaty was entered

into with the U.S.A. whereby certain public

services of the Republic were to be controlled by

U.S. officials. The Treaty expires in 1936. On

Oct. 1, 1931, the U.S. officials in charge of Public

Health, Public Works, and the Agricultural

Technical Service, were withdrawn. The Finan-

cial and Constabulary services still remain under

U.S. control.

The area of the Republic of Haiti is estimated

at 10,204 square miles, with a population

estimated (Jan. 1, 1927) at 2,300,000 inclusive

of white foreign residents and military forces of

the United States. The mountains are richly

* At par = Quetzal = \$2 U.S.

and heavily timbered, and susceptible of cultivation nearly to their summits; it is probably the most fertile spot in the West Indies, whilst its harbours, especially Port-au-Prince, offer considerable facilities to foreign trade. The principal productions are coffee, logwood, cocoa, cotton, hides, sugar, honey, gums, and oilseeds, these being the chief exports. It is said to contain mines of gold, silver, copper, tin, and iron. Its commercial prosperity has been almost annihilated by repeated revolutions. The principal foreign trade is carried on with the United States, Great and Greater Britain, France, and Germany; the principal articles imported from Great Britain are piece-goods, jute bags, hardware, and agricultural tools. An armed Constabulary, urban and rural, was formed in 1926. This force is officered in part from U.S. Marine Corps and Navy, and consisted (Oct. 1, 1931) of 197 officers (U.S. and Haitians) and 2,950 other ranks. A coastguard service is attached to the Constabulary. There are about 135 miles of railway. In 1925 26 the entries and clearances at Port-au-Prince were 408 steam vessels (1,001,007 tons). French is the official language of the country, but most of the people speak a debased dialect known as Creole French.

HONDURAS.

(República de Honduras.)

President, Dr. Vicente Mejia Collindres, assumed office Feb. 1, 1929.

Consul-General in London, Señor Don Basilio de Telepnef, 15 Union Court, Old Broad St., E.C.2. The Middle State of Central America, stretching in N. lat. between 15° 10' and 16°, and W. long. between 83° 10' and 88° 40'; containing 44,275 English square miles, with a population estimated at 775,000 (1930).

Christopher Columbus landed at Cape Honduras in 1502, and in 1524 the country was settled by the Spaniards. In 1525 Hernando Cortes founded the city of Puerto Cortes, and from 1539 to 1821 the country formed part of the Captaincy-General of Guatemala. From 1821 to 1839 Honduras was included in the Confederation of Central America.

The Republic of Honduras has a coast-line of nearly 400 miles on the Caribbean Sea, chief

ports, Truxillo, Puerto Castilla, Puerto Cortes, Omoa, Roatan, Tela, and La Ceiba; but only about 40 miles on the Gulf of Fonseca, on the Pacific side, chief port, Amapala, on Tiger Island; port on mainland is San Lorenzo, 2 hours in gasoline launch from Amapala. From San Lorenzo by auto to capital, Tegucigalpa, 88 miles, good road, 5-6 hours. Road from Tegucigalpa to the Atlantic coast has now been completed as far as Potrerillos, the terminal station of the unfinished Inter-oceanic and is in fair condition. The journey to the lake takes from 9 to 10 hours in automobile, the lake is crossed in 1 hour by auto-ferry and thence to the head of the railway at Portrerillos the road is completed, cars taking from 2 to 3 hours. Potrerillos is 2 hours by rail from San Pedro Sula, and 3 hours from Puerto Cortes. By taking express automobiles and express car on the railway, it is now possible to make Puerto Cortes from Tegucigalpa in 24 hours, thus reaching New York in 5 or 6 days. There is an aeroplane service between the capital and most of the principal towns in conjunction with Pan-American Airways, and aeroplanes are available to carry passengers to Tela and La Ceiba (on N. coast) to connect with steamer sailings. There are railway connections between San Pedro Sula, and Tela and La Ceiba. The country is mountainous, being traversed by the Cordilleras. The soil in the valleys and tablelands is very fertile, the products being bananas, coconuts, mahogany, fruit, cattle, sugar, rice, tobacco, coffee, sarsaparilla, hides and skins, cedar, fustic, rose, and lama wool (Kapok). There is an immense amount of uncultivated land. The number of cattle is estimated at 500,000. The forests are extensive, but there is a lack of communications and transport. Its mineral wealth is great, the value of gold and silver exported in 1930-31 being £304,000. In 1929 there were 1,432 kilometres of railway open, all on the North Coast. The language of the country is Spanish.

	1929 '30	1930 '31
Revenue	£1,431,430	£1,181,867
Expenditure	1,502,170	1,387,514

Office of Legation and Passport Office, 35B Eaton Place, S. W. 1.

By unanimous vote of the National Assembly, Hungary was re-constituted a Kingdom in 1920, after having been declared a Republic on Nov. 17, 1918. The area of present-day Hungary is about 36,179 sq. miles, its territories being decreased from the area of the former Kingdom of Hungary (which was united to the Austrian Empire by the identity of sovereigns) through the transfer of Transylvania to the Rumanians and of Croatia and Slavonia to the new Yugoslav Kingdom (q.v.) and of Slovakia and Ruthenia to Czechoslovakia (q.v.). The population (almost entirely Magyar) was 8,683,740 (Dec. 1930). The political neighbours are Czechoslovakia on the N., Yugoslavia on the S., Rumania on the E., and Austria on the W.

On the declaration of Republican institutions in 1918, Count M. Károlyi assumed office as Provisional President, but on March 22, 1919, Count Károlyi resigned, and was succeeded by a "Bolshevik" administration with a "Soviet" (Workers' Council), in which Bela Kun (or Cohen) was the dominant personality. This administration was driven out of power by the successes of the Rumanian military forces (which invaded Hungary and occupied Budapest) and was followed by a Socialistic Government under Julius Pötel (Aug. 1, 1919). Six days later the Socialistic Government was superseded by an administration appointed by the Archduke Joseph, who accepted office as Provisional President, Aug. 7, 1919, but resigned in consequence of the protests of the Supreme Council in Paris.

On March 7, 1920, Admiral Nicholas von Horthy of Nagyványa was elected Governor of Hungary by vote of the National Assembly, which gave him sovereign rights, with certain restrictions.

In 1921, the ex-king Karl made two efforts to regain the throne, remaining in the country from

March 26 to April 5, and from Oct. 22 until removed under escort. On each occasion the Hungarian Government was informed that a Hapsburg restoration would not be tolerated by the European Powers.

All religions are tolerated; the greater number of Magyars are Roman Catholics, but there is a large Protestant minority. The parcelling out of the great estates, which was forcibly attempted during the Károlyi régime, has been continued to a small extent, but on an economic basis; a land-reform bill aiming at "a more equitable distribution of landed property," was carried out in 1920-1925, reducing by about 10 per cent the total area of large estates.

A single chamber National Assembly (introduced Jan. 4, 1920), was replaced in Dec., 1926, by a Parliament composed of a Chamber of Deputies elected by universal suffrage, and an Upper Chamber, which corresponds in a modified form to the Chamber of Magnates as it existed before the revolution of 1918.

The greater part of the area of present Hungary consists of the Alföld or Great Plain, parts of which may be considered as among the most fertile for agricultural purposes in the world, producing grain of excellent quality and supporting a number of horses, cattle and swine. The mountainous districts having been ceded to surrounding states by the Peace Treaty, Hungary has lost the greater part of the forests and mines, which formerly contributed so largely to the national wealth.

No part of Hungary touches the sea. The length of navigable rivers is 687 miles, there are about 5,000 miles of railways and 5,800 miles of telegraph in the present Kingdom.

(Island.)

King, Christian X (see Denmark).**Presidents of Al-thing**, G. Olafsson; A. Asgeirsson.

Iceland is a large, volcanic, and treeless island in the North Atlantic Ocean, extending from 62° 23' to 66° 33' N lat., and from 13° 22' to 24° 35' W long., with an estimated area of 40,497 square miles, or greater than that of Ireland. The population was estimated at 100,000 in 1928.

An Act for the creation of a Danish-Icelandic Federal Constitution, Denmark and Iceland to be free and independent States under the same Sovereign, came into force on Dec 1, 1918, but since the constitution granted in 1915 the assembly (Al-thing) had been more or less independent of the Government at Copenhagen in internal questions. The principal products of the island are sheep, cattle, ponies, and fish, and the imports consist of almost all the necessities of life, the chief items being grain and meal, sugar, coffee, salt, cotton goods, tobacco, spirits, hardware, and timber. Total imports (1930) . £3,249,120, exports, £2,713,115. Iceland is in direct telegraphic communication with Great Britain.

IRAQ.

(Mesopotamia.)

King of Iraq, Faisal I., G.C.M.G., born 1884, elected King of Iraq, Aug. 10, 1921, married (1906) the Sherifa Huzayma, daughter of the Sherif Nazim, acceded Aug. 23, 1921.**Crown Prince**, H.R.H. the Emir Ghazi, b. March 21, 1922.**Prime Minister**, Naji Beg Shawkat.**Minister for Foreign Affairs**, Abdulkadir Rashid.**Ambassador in London** (vacant).**Chargé d'Affaires**, Atta Beg Amin.**Embassy**, 22, Queen's Gate, S.W. 7.**Iraq**, or **Mesopotamia**, "the land between the rivers" (Euphrates and Tigris), extends from Kurdistan on N and N.E. to the Persian Gulf on the S. and S.E., and from Persia on E. to Syria and the Arabian Desert on W. the approximate position being between 37½° to 48½° E. long., and from 37½° to 30° N. lat. The territory was freed from Turkish rule during the War of 1914-18 by Anglo-Indian and British Dominion troops under Generals Nixon, Maude, and Marshall (Gen. Maude succumbing to cholera after the capture of Baghdad). Under the Treaty

of Lausanne, ratified on Aug. 6, 1923, Turkey renounced the sovereignty over Mesopotamia, and its future administration was entrusted to Great Britain by the Supreme Council of the Allies. A provisional Arab Government was set up by the High Commissioner in Nov. 1920 and in Aug. 1921 the Emir Faisal (3rd son of ex-King Hussein of the Hejaz) was elected King of Iraq, to be enthroned on Aug. 23, 1921. In March, 1924, a Constituent Assembly met in Baghdad, and passed an organic law and an electoral law for the election of a Chamber of Deputies. The constitution thus instituted is a Constitutional Monarchy, hereditary in the family of King Faisal, with a Senate of 20 members nominated by the King, and a Chamber of Deputies of 88 members elected by manhood suffrage. The first Parliament under this Constitution was opened by King Faisal on July 16, 1925. An application for admission to the League of Nations came before the Assembly in 1932, and Iraq was freed from all Mandatory control through admission to the League on October 3, 1932. On June 30, 1930, a new Treaty was signed at Baghdad by the High Commissioner and the Prime Minister. This Treaty is of 25 years' duration from the entry of Iraq into the League, and regulates the relations between Great Britain and Iraq during that period on the basis of an alliance between two equal and independent States.

The total area of Iraq is about 116,000 sq miles, the distance from Basra in the south to Mosul in the north being approximately 500 miles. At the Census of 1920 the population was ascertained to be 2,849,282, as under—

Baghdad vilayet	1,360,304
Basra vilayet	785,600
Mosul vilayet	703,378

Total 2,849,282

Baghdad includes the Baghdad, Samarra, Diyala, Kut, Diwaniyah, Hillah and Dulaim Divisions (*Liwas*); **Basra** includes the *Liwas* of Basra, Amara and Muntalk; and **Mosul** includes Mosul, Arbil, Kirkuk and Sulemani (Mosul covers a great part of the ancient kingdom of Assyria, the ruins of Nineveh, the Assyrian capital, being visible on the banks of the Tigris, opposite Mosul).

Of the total population there were in 1920 1,146,685 Sunni Muhammadans, 1,494,015 Shiite Muhammadans, 87,488 Jews, 78,792 Christians, and 43,302 other religions.

The country is capable of supporting a population many times in excess of its present inhabitants if irrigation is developed and extended. In 1908 certain works were undertaken, following on the report of Sir W. Willcocks, and during the British occupation notable improvements were effected, the Irrigation Department is at present confining itself to small and immediately remunerative schemes. The wealth of the country depends entirely upon agricultural development, and two harvests can be gathered in the year, the chief crops being wheat, barley and beans, and rice, and Indian corn; wheat averages 46½ lb. per acre, barley 62½ lb., and rice over 1,000 lb. In 1928-29 there were 1,547,000 acres (deriving their water from the Tigris and Euphrates) under general cultivation, an increase of 64 per cent. on the previous year. Cotton

growing is a developing industry and it is estimated that Mesopotamia could yield 300,000 bales annually if sufficient labour is forthcoming. A concession for the exploitation of the oil in the Baghdad and Mosul vilayets was granted to the Turkish Petroleum Company (now the Iraq Petroleum Company), in March, 1925. The results of the geological surveys made by the company suggest that Iraq may contain one of the richest oilfields in the world. A number of wells have been drilled in the neighbourhood of Kirkuk, and in October, 1927, the first "gusher" was struck and capped at Baba Gurgur. The Khanaqin Oil Company (a subsidiary of the Anglo-Persian Oil Company) holds a concession which is confined to the Transferred Territories (an area on the N.E. frontier transferred from Persia to Turkey in 1913-14), which is an adaptation of the D'Arcy concession held by the A.P.O.C. Since the war oil has been struck near Khanaqin and the field is considered a promising one. The Khanaqin Oil Company have opened a refinery near to Khanaqin town which produces sufficient petrol, kerosene and crude oil for the needs of Iraq.

The *Euphrates* (which has a total length of 1,800 miles from its source to its outflow in the Persian Gulf) is formed by two arms, of which the Murad Su (415 miles) rises in the slopes of the Ala Dagh, a mountain of Eastern Erzerum, and flows westwards to a junction with the Kara Su, or Frat Su (275 miles), the latter rising in the north-west of Erzerum in the Dumlupinar Dagh. The *Tigris* has a total length of 1,150 miles from its source to its junction with the Euphrates at Garmat Ali, 70 miles from the Persian Gulf, and rises in two arms south of the Taurus mountains, in Kurdistan, uniting at Til, where the boundaries of the vilayets of Diarbekir, Van and Bitlis conjoin.

Communications and Trade—The country is being opened up and existing communications improved and secured. Schools, hospitals and dispensaries have been established under British auspices. Basra was equipped with wharves, railway sidings, &c., for military purposes, and is thus suited for commerce. The chief imports are textiles, sugar, and tea, and the chief exports are dates, wool and barley.

The Baghdad Railway—In 1899 the Anatolian Railway Company obtained a concession from the Sultan of Turkey for the construction of a railway from Konieh (the eastern terminus of the Anatolian Railway) to the Persian Gulf at Koweit, and Baghdad, a total length of 1,550 miles, with a single track of 4 ft 8½ in. gauge. Its projected course was from Konieh to Adana, thence S.E. to Aleppo, Jerablus (where it would cross the Euphrates and enter Iraq), and Mosul, and thence S down the right bank of the Tigris to Baghdad and the Persian Gulf. The section Konieh-Eregli-Bulgulu (124 miles), was opened in Oct. 1904, and at the outbreak of the Great War about 1,200 miles (out of the total of 1,550 miles) were in operation, with gaps in important sections (notably in the hills N.W. of Aleppo, and in the desert W. & S. of Mosul). The line crosses the Euphrates at Jerablus and is open to goods and passenger traffic as far as Nisibin. The track actually extends a further 10 miles into Syrian territory in the direction of Mosul. Railheads at Nisibin and Kirkuk are connected by a motor service, and through bookings by this route from Europe to Baghdad are obtainable. The first through train from Basra to Baghdad left Basra on

Jan. 23, 1920. The total length of line open at that date was 945 miles compared with 1,113 miles during the War, some important lines having been disused since the cessation of hostilities with Turkey, since that time lines have been laid from Baghdad to Kerbala and Baghdad to Kirkuk. The line to Kirkuk will be extended to Mosul.

Capital—The chief city is Baghdad, the former capital of the Abbasside dynasty, one of the Caliphs of that dynasty being Haroun al Rashid of "the Arabian Nights." Baghdad has an estimated population of 270,000, other towns being Basra, 85,000, and Mosul (opposite the site of Nineveh), 90,000.

ITALY.

(Regno d'Italia.)

King, Victor Emmanuel, born November 11, 1869; married, Oct. 24, 1896, Princess Helen of Montenegro. succeeded to the throne July 29, 1900.

Her Apparent, H. R. H. Humbert, Prince of Piedmont, born Sept. 15, 1904.

CABINET (June 30, 1924; reconstructed 1925, 1929 and July, 1932)

Prime Minister and Minister of Foreign Affairs, Interior, and Corporations, Signor Benito Mussolini.

Justice, Prof. Pietro De Francisci

Finance and Treasury, Signor Guido Jung.

War, Gen. Pietro Gazzera.

Marine, Adm. Giuseppe Siranni.

Air, Gen. Italo Balbo.

Public Works, Signor Arnaldo di Crollalanza.

* Signor Benito Mussolini is the accredited leader of *Fascism*, the *Fascists* representing a revolutionary movement against the inactivity of post-war Italian statesmen. The uniform of the movement is a black shirt, and the name is derived from *fascio* or band (cf. the *fascis* of the Roman lictor) in which the movement was organised.

Colonies, Gen. de Bono.

National Education, Prof. Francesco Ercole.

Agriculture and Forests, Barone Giacomo Acerbo.

Communications, Count Costanzo Ciano.

Ambassador in London, His Excellency Dino

Grandi, 4 Grosvenor Square, W. 1

Counsellor, Signor Francesco Giorgio Mamelli.

1st Secretary, Nobile Don Reunato Pinuas Barrago.

and Secretary, Signor Pasquale Jannelli.

3rd Secretaries, Nobile Giulio del Balzo del Duchi di Presenzano, Signor Giovanni J. Bosio.

Attaché, Signor Gaetano de Facoli Negrati

Naval Attaché, Capt Angelo Jackino.

Military Attaché, Lieut. Col Umberto Mondadori

Air Attaché, Capt Ercole Fignona della Floresta

Commercial Counsellor, Signor Giovanni Battista Ceccato.

Asst do, Signor Giuseppe Massone.

Special Attaché, Signor Giuseppe Palliccia, O.B.E., M.C.

Chancellor, Signor Giuseppe de Grossi.

Royal Consul-General, Nob. Alessandro de Prohizer, 68 Portland Place, W. 1.

Vice-Consul, Signor P. Righetti

A Kingdom in the South of Europe, consisting of a peninsula, the large islands of Sicily and Sardinia, the island of Elba, and about 70 minor islands (with certain dependencies hereinafter noted). It is bounded on the N. by the Republics of Switzerland and Austria, on the E. by the Mediterranean, on the E. by the Adriatic and Yugoslavia, &c., and on the W. by France and the Ligurian and Tyrrhenian Seas. The total area of the kingdom of Italy in 1914 was 110,623 sq miles, and by the Treaty of Versailles (June 28, 1919) Italy gained from Austria-Hungary the Trentino (about 4,000 sq miles) and Trieste (with about 1,000 sq miles of the Adriatic Sea-board).

The total area of the Kingdom of Italy was estimated (Dec 1927) at 119,743 square miles, with a population at the census of March 29, 1931, of 42,158,817. There is a large settled and floating population of Americans and English.

By a treaty signed at Rome (Jan. 27, 1924), the Free State of Fiume came to an end. Yugoslavia's sovereignty over Port Baros and the Delta is established by the treaty, and Italy acquired the town and harbour works of Fiume, together with a narrow strip of hinterland. Italy agreed to lease to Yugoslavia the Thaco di Revel quay at a rental of one gold lira for 50 years, the railway station being established as an international frontier station. Fiume is now the capital of the newly created Italian Provincia del Carnaro, and has the status of an Italian provincial town.

The Italian peninsula is traversed throughout its length by the chain of the Apennines; the Alps form its northern limits, dividing it from France, Switzerland, Germany, Austria and Yugoslavia. Mont Blanc (15,781 feet), the highest peak of the Alps, is in the French Pennine Alps, but within the Italian borders are Monte Rosa (15,217 feet) and several peaks from 12,000 to 14,000 feet. The chief rivers are the Po, the Adige, the Tiber, and the Arno.

GOVERNMENT.—Italian unity was accomplished under the House of Savoy, after an heroic struggle from 1848-1870, in which the great patriots Mazzini (born 1805, died 1872) and Garibaldi (born 1807, died 1882) were the

principal figures. It was completed when Lombardy was ceded by Austria in 1860 and Venice in 1866, and through the evacuation of the Papal States by the French in 1870. In 1871 the King of Italy entered Rome, and that city was declared to be the capital. The government was that of a constitutional monarchy with a legislature of two houses—the Senate (of 265 life members appointed by the King), and the Chamber of Deputies of 536 members (elected by adult manhood suffrage). Under the reforms instituted by Signor Mussolini an entirely new and complex form of government has been built up—the Fascist "syndical-corporative" state. The Senate and Chamber are retained, but the latter are elected *en bloc*, a list being drawn up by the Fascist Grand Council and submitted to the electorate for acceptance or rejection as a whole. The basis of the composition of the list is roughly equal representation of capital and labour, the essence of the "syndical-corporative" idea being that the State should take charge of the economic development and functioning of the country.

PRODUCTION.—Agriculture (including the growing of grapes, olives and chestnuts) is the principal industry. Italian wines are numerous and celebrated, and olives and olive-oil are furnished by Tuscany, Liguria, and the province of Bari; while fruit abounds and is largely exported. The cultivation of the silkworm forms an important industry. Among the principal minerals are iron, lead, zinc, copper, manganese, and antimony ores, sulphur, gypsum, amianthus, alum, and boric acid. Silver is found in Sardinia, and some gold in the Alps. Salt and tobacco are Government monopolies.

The principal exports are cotton, silk and woolen tissues, motor cars, olive-oil, wine, candied citron, sienna earths, pastes, coral, rags, boric acid, raw and thrown silk, hemp, cattle, straw hats, rice, iron, zinc and copper ores, sulphur, marble, fruit, vegetables, fresh and prepared meats, poultry, chemical products, woods, roots, &c., for dyeing and tanning, artistic works &c. The imports chiefly consist of cotton, wheat, coal, coke, chemicals, colonial produce, yarns, jute and manufactured goods, woollens, raw silk, silkworms' eggs and cocoons, machinery, iron and steel in bars, plates and rails, hardware, raw hides, horses and cows, fixed oils, salt fish, dye-stuffs, tobacco, earthenware, &c. The manufactures are woollen, cotton, silk, hemp, and linen yarns and tissues, motor cars, rubber tyres and tubes, leathers, straw and felt hats, furniture, chemical products, paper, agricultural and other machinery, prepared meats, artistic works (such as mosaics, pottery, Venetian glass, alabaster ornaments), &c. Sugar is extracted from beet in large quantities for home consumption.

DEFENCE.—The Army consists of 30 Infantry Divisions and a *Divisione Celere* (Cavalry and Cyclists) organized in 11 Army Corps, but a large number of Units and Services, e.g., Bersaglieri, Alpini, Tanks, &c., are not included in these formations. During summer months (with two classes of conscripts with the colours) the strength is about 400,000; in winter months 200,000 (with one class). Age of liability for recall to Military service was raised in 1929 and brings total numbers available in case of war to 4,000,000-4,500,000 men. The National Militia (Black Shirts) are also part of the Land Forces of Italy. Their establishment is 300,000.

but only a small percentage are on permanent service, the remainder being in civil employ, ready for duty whenever required. The Militia supplies 4 Battalions to each Infantry Division in war. On May 24, 1915, Italy declared war on Austro-Hungary, and on Aug. 27, 1916, a state of war was declared to exist with Germany. The cost of the war to Oct. 31, 1918, amounted to 48 milliards of lire (£1,920,000,000). During the War of 1914-1918, over 15 per cent. of the population were mobilised, and 3,250,000 men passed into the Armies of Italy. The Navy includes 5 modern and 1 pre-Dreadnought battleship, 16 cruisers, 1 aircraft carrier, 11 flotilla leaders, 60 destroyers, 47 torpedo boats, 42 submarines, 12 gunboats and despatch vessels, a river gunboat, and 46 minesweepers and minelayers. The peace personnel of the Italian Navy is about 45,000 all ranks. Spezia and Pola, the chief naval and military ports of the kingdom, are securely fortified. The Air Force consists of 120 squadrons of aircraft, of which 10 are employed in the colonies. The official first-line strength of aircraft is 973 machines, with a further 100 in reserve. The personnel for 1929 includes 941 officers and 18,631 other ranks, the expenditure for 1929-30 being 700 million lire, of which 60 million is for Civil Aviation.

EDUCATION—Primary Education is free and compulsory, and evening continuation classes are also compulsory for military recruits. It is maintained by local taxation and State grants. Secondary education is generally State-maintained, and schools are increasing in number. Several of the Universities are of very ancient foundation.

COMMUNICATIONS—On July 31, 1930, there were 10,407 miles of railway open for traffic, 1,022 being electrified and 352 in course of electrification; the post-offices (1929) numbered 11,228, and there were (1929) 40,855 miles of telegraph line. The sea-going commercial marine (1929) consisted of 1,396 steamers (3,212,302 gross tons) and 1,652 sailing vessels (168,279 tons). In 1929 248,379 ships (77,177,450 net tons) entered Italian ports, the clearances were 248,494 (77,185,386 net tons).

ITALIAN COLONIES, &c.

Libia.—The Turkish vilayet of Tripoli and the mutessarifiat of Benghazi on the northern coast of Africa, were occupied by Italy in 1911-12, and under the Treaty of Ouchy (Oct. 1912) the sovereignty of the province was transferred to the King of Italy, the spiritual headship over the Muhammadan population being retained by the Caliph. Tripoli is the most easterly of the Barbary States, extending from the frontiers of Tunis to those of Egypt, a distance along the coast-line of nearly 1,200 miles, and inland to the south a distance of about 800 miles. The transferred territory comprises the four sub-provinces or Mutesarifliks of Tripoli, Khoms, Jabel-el-Gharb, and Fezzan, and also of Benghazi or Cyrenaica, a total area of 820,000 square miles, with a population of about 1,000,000. There are no rivers in the country, and the rainfall being precarious, a good harvest can only be reckoned on every four or five years. Barley, dates, olives, oranges, lemons, and vegetables are produced, and the principal imports are metals, British and other European manufactures, tea, beads, wine and spirits, besides a number of articles for barter in Wadai, Bornu, and the Western Sudan, whither caravans proceed from Tripoli. The principal articles of exports are ostrich feathers, ivory, skins, sponges, hides, esparto grass, wool, cattle, and horses. The ancient ruins in Cyrenaica, i.e. at Cyrene, Ptolemais, and Apollonia, are interesting to explorers, as well as those at Leptis Magna, which is close to Khoms, or 70 miles from the city of Tripoli; a four-sided arch erected to the Emperor Severus and a Roman market place were uncovered in Leptis Magna in 1931-32. The population of Benghazi consists of Arabs, Greeks, Maltese, and a few Levantines. The commerce in cereals, wool, cattle for Malta, and other agricultural produce, is considerable, when a sufficient rainfall causes good harvests. The capital of "Tripolitana" is Tripoli (population 60,000), and of Cyrenaica, Benghazi (population 35,000).

Governor of Cyrenaica, and Tripolitana,
Marshal Badoglio.

Eritrea is a Red Sea colony, and extends from Ras Kasar, 18° 2' N., to Ras Demorra, 10° 42' N., and is bounded on N.W. by the Anglo-Egyptian Sudan, on S. by Abyssinia, and on S.E. by French Somaliland. It consists of a triangular portion of barren and sandy lowland with a coast-line along the Red Sea of about 700 miles, and covers a total area of 64,000 square miles, with a population of about 520,000, of whom about 3,500 are Europeans. The capital is Asmara, Massawa being the chief port, where there is a good harbour. The principal products are potash, skins, and salt, of great value as being the monetary currency of Southern Abyssinia.

Governor of Eritrea, H.R. Duke Astuto di Lucchesi

Somaliland.—Italian Somaliland comprises a coastal strip on the Gulf of Aden and the Indian

Ocean, from 12° N. lat. to the Equator, and is bounded on the N. by the Gulf of Aden, on E. by the Indian Ocean, and on W. by British Somaliland, Abyssinia, and British E. Africa. The total area, including the territory of Jubaland (and the port of Kismayu) transferred from Kenya by Great Britain in 1925, is about 220,000 sq. miles, and the population is estimated at 900,000. Agriculture and camel and cattle rearing are the principal industries. The capital is Mogadisho, on the Indian Ocean.

Governor of Italian Somaliland, Signor M. Rava. **Tientsin.**—Italy obtained in 1902 a concession of land fronting the Peiho river (China), with a total area of 20 square miles and a population of about 10,000 natives.

Aegean Dependencies.—Rhodes, Egea and the Dodecanese (12 islands occupied by Italy in 1922 during the war with Turkey, viz.:—Stampalia, Scarpanto, Caso, Piscopi, Nisiro, Callimno, Lero, Patino, Cos, Simi, Calchi, and Lipso). The seat of administration is at Rhodes (Rodi) and the total population is about 100,000

JAPAN.

(Nippon.)

Emperor (Tenno) of Japan, His Imperial Majesty Hirohito, K.G., G.C.B., G.C.V.O., born April 29, 1901, succeeded Dec. 25, 1926; married (1924) Princess Nagako (born March 6, 1903), daughter of the late Prince Kunyoshi Kuni (died Jan. 27, 1929), and has issue three daughters.—

(i) H.I.H. Princess Shigeko.

(ii) H.I.H. Princess Kazuko.

(iii) H.I.H. Princess Atsuko.

Brothers of the Emperor—

(1) H.I.H. Prince Yasuhito Chichibu, born June 25, 1902, married Sept. 28, 1928, Setsuko Matsudaira (born Sept. 9, 1909).

(2) H.I.H. Prince Nobuhito Takamatsu, born Jan. 3, 1905, married Feb. 4, 1930, Kikuko Tokugawa, grand-daughter of the late Shogun Tokugawa.

(3) H.I.H. Prince Takahito Sumi, born Dec. 2, 1915.

CABINET (May 25, 1932).

Prime Minister, Admiral Viscount M. Saito

Minister of Foreign Affairs, Count Y. Uchida.

Minister for Home Affairs, Baron T. Yamamoto.

Minister of Finance, K. Takahashi.

Marine, Admiral K. Okada

War, General S. Araki.

Justice, M. Koyama.

This ancient and extensive Empire consists of four large and many small islands, said to comprise in all above 4,223, the principal of which are Honshu, Shikoku, Kiu-shu, Hokkaido or Yezo, situate to the north of the main island, from which it is separated by the Tsugaru Straits, and Formosa, called by the Japanese, Taiwan. The Ainu, an uncivilised but harmless tribe, who in ancient times occupied the greater part of the country, are still found in Yezo, but in diminishing numbers. The Kurile Islands have belonged to Japan since 1875, and in 1876 she incorporated the Luchu (Ru-kiu) Islands under the name of "Prefecture of Okinawa." The empire, with its dependencies, comprises an area of 360,783 square miles, with a population (Dec., 1928) of 83,536,012. The population of the mainland only on Sept. 1, 1929, was 62,938,200. The islands are eminently volcanic, and 18 of the summits are still active, the chief of these, Fuji-san, or Fuji-no-yama, the loftiest and most sacred mountain of Japan, about sixty miles from Tokio, is 12,370 ft high, and has been dormant since 1707. Japan is also liable to frequent, and occasionally disastrous, earthquakes. The country is very mountainous, and not more than one-sixth of its area is available for cultivation. It possesses numerous fine harbours. The soil is productive, teeming with every variety of agricultural produce. Copper, iron, sulphur, lead, manganese, tin, tungsten, molybdenum, antimony, zinc, agate, cornelian, and rock crystal are found. Gold is found in the island of Sado, and silver mining is prosecuted on a small scale, while there is a good supply of middling coal. Petroleum is also being produced in quantities, especially in the Province of Echigo. Among the vegetable productions may be noted the camphor-tree, paper mulberry, vegetable wax-tree, and a lacquer-tree, which furnishes the celebrated "lacquer" of Japan. The principal timber trees are the *Cryptomeria japonica*, *Pinus Massoniana*, and *Zelkova Keaki*, the Paulownia imperialis is largely used for fancy boxes and works of art; the maple is merely for ornament. Chestnut, beech, and elm are comparatively rare and little used. The tobacco-plant, tea-shrub, potato, rice, wheat and other cereals are all cultivated; rice is the staple food of the people, about 347,500,000 bushels being consumed annually in Japan proper (home-grown crop 1930, 65,305,430 koku; koku=5 bushels, approximately). Agriculture, upon which the Japanese bestow great care, is their chief occu-

pation. The coasts are extremely rich in fish. The floral kingdom is rich, beautiful, and varied, though scented flowers are comparatively few. Fruit is abundant, including the orange, persimmon and loquat, European fruits, such as apples, strawberries, pears, grapes, figs, and peaches are produced, and the American navel orange is extensively grown.

Commerce and Industry.—The chief manufactures are silk and cotton woven goods, cotton yarn (220 cotton spinning mills were in operation in Dec. 1928), matches, paper, glass, cement, chemicals and fertilisers, sugar, brushes, flour, insulated electric wire, woollen fabrics, rubber goods, soap, lacquer ware, porcelain, earthenware, mats, matting, hemp-brails, knitted goods, vegetable oil, crude camphor, camphor oil, straw-plaits, and bronze, while shipbuilding is an important industry in the yards. The chief imports are raw cotton from India, U.S.A., Egypt, and China; wheat from Canada, Australia and U.S.A., oil cake from Kwantung Province and China, wool from Australia, crude rubber from Malaya, lumber from U.S.A., and piece goods, metals, manures, woollens, wool, drugs, rails, locomotives, and machinery from the U.S.A. and Europe. Sugar is largely imported from the Dutch East Indies, Philippine Islands and Formosa; kerosene oil from U.S.A. and the Dutch Indies; beans, peas, and pulse from China, Kwantung Province, and Korea, and rice, principally from British India, French India, Korea, Siam, and China. The chief exports are silk, cotton fabrics, cotton yarns, tea, refined sugar, knitted goods, matches, coal, camphor, straw-plaits, porcelain, earthenware, marine products, paper, glass and toys.

Communications.—There were about 13,560 miles of Government and private railroad (steam and electric) on Dec. 31, 1929, in addition to 2,200 miles open in Korea, 952 miles in Formosa and 301 in Saghalien, while the South Manchurian Railway in China (754 miles) is under Japanese control. The mercantile marine of Japan and her dependencies consisted in 1929 of steamers and motor vessels of 4,225,772 gross tons, in addition to small craft and wooden ships. The total tonnage entered and cleared at the chief ports in 1929 was 133,140,249 (25,106 vessels). The three great ports are Kobe, Yokohama and Osaka, the first named having a large transhipment trade, in addition to direct imports and exports. In March, 1927, there were 8,784 post offices dealing with about 4,000,000,000 postal packets annually, and 166,272 miles of telegraph line carrying 67,165,166 messages outward in the financial year 1926-27.

Defence.—Service in the Army is universal and compulsory between the ages of 20 and 40. The Army is divided into a first line (*Gen-eki*), and its reserve (*Ishi*), a second line (*Kobu*), and its reserve (*Kokunaru*), with a third line to make good the wastage of war (*Uyuu*). The peace strength of the first line is 22,766 officers and about 220,000 other ranks. The Military Air Force is organized in 8 flying regiments and a balloon corps; the Naval Air service consists of 27 shore-based squadrons, in addition to machines carried by aircraft-carriers and other ships, with 4 small air-ships and a balloon section. The Navy includes 6 battleships, 4 battle cruisers, 4 (10,000 ton) cruisers and 28 others, 5 aircraft carriers, 109 destroyers and 66 submarines.

Japan declared war against Germany on Aug. 23, 1914, and captured the German fortress of Tsingtau in November, 1914.

Education is in the lower grades free and compulsory. High schools are State-aided, and prepare for a 3 years' course at the Universities. There are high schools for girls, and the technical and special schools are well attended. There are six State Universities of Tok o (a), Kyoto, Tohoku (at Sendai), Hokkaido and Kyushu (at Fukuoka), and 5 medical universities.

Exports to U K	£8,064,000	£7,109,000

Formosa—The island of Formosa (Taiwan) was ceded by China to Japan (June 2, 1895) in accordance with the Treaty of Peace. On the E. coast of the island are the highest known sea cliffs in the world, 8,000 feet sheer above the water. Its total area is 13,500 square miles, with 4,450,114 inhabitants (1928). Imports, Yen 204,910,684, exports, Yen 271,893,266, in 1929. The colony has been self-supporting since 1906, producing 36,580,000 bushels of rice in 1930, and it is the principal source of the world's camphor supply. Estimated rev. and exp (1928-29), Yen 109,246,000. Capital, Taihoku, pop (1928), 219,556.

Saghalin (Karafuto)—The southern half of this island was ceded by Russia at the close of the Russo-Japanese war. The ceded territory has a total area of 9,824 sq. miles with a population (1928) of 240,502. The Japanese Government is encouraging the settlement of agriculturists, and there is a large fishing industry. Estimated revenue and expenditure (1928-29) Yen 27,340,000.

The **Kwantung Peninsula**, which had been leased to Russia by China, was similarly leased to Japan after the Russo-Japanese war. Area, 1,300 sq. miles; population (1930) 905,181. The port of Dairen provides Japan with a mainland port, ice-free all the year round, and the peninsula is fertile. Imports (1929), £22,396,353, exports, £38,501,930. Estimated revenue and expenditure (1928-29), Yen 224,091,717. Capital, Port Arthur (Ryojyunko), chief port, Dairen, pop. (1930), 369,767.

The **Pescadores (Bokoto)** consists of about 63 islands, with a total area of 85 square miles, and a population (1928) of 62,606.

Korea (Cho-sen)—By a treaty of Aug. 23, 1910, Korea was annexed to Japan and became part of the Japanese Empire.

Korea is situated between 122° and 128° E. long., and between 34° and 43° N. lat., and the coast is fringed with innumerable islands, of which the largest is Quelpart. Total length, 600 miles from north to south, and greatest breadth 135 miles from east to west, with an area of

about 85,156 square miles. Population estimated at 19,189,699 (Dec. 1928); there are 469,043 (Dec. 1928) Japanese in the country. The soil is fertile, but the arable land is limited by the mountainous nature of the country. The staple agricultural products are rice and other cereals, beans, cotton, tobacco, and hemp, fruit-growing is making progress and sericulture is thought to have a bright future. Ginseng, a medicinal root much affected by the Chinese, is largely grown under Government supervision at Songdo (Kajjo), and, being a Government monopoly, forms a rich source of revenue. Gold, copper, coal, iron, and other minerals are distributed throughout the country. There are extensive forests in the extreme north. The principal exports are rice, beans, silk, fish, fish-oil and manure, iron and iron ore, raw cotton, livestock and hides. Manufactures are as yet in a primitive condition, but are growing, including cotton yarn, silk-reeling, sugar, paper, artificial fertilisers, cement, flour (output at present small in each case). The greater part of the sea-borne trade is carried in Japanese bottoms. Considerable progress is being made in the direction of the proper lighting of the coast. The total railway mileage open to traffic is (1929) 2,200 miles. Estimated rev. and exp. (1930-31), Yen 238,859,783. Capital, Seoul (Keijoju); pop. (1928) 321,848.

Imports into Korea, 1930 . . . Yen 367,050,000
Exports from Korea, 1930 . . . , 266,540,000

Pacific Islands—Under the Treaty of Versailles, 1919, Germany renounced the sovereignty of all her over-sea possessions, and the German Pacific Islands N. of the Equator have been placed under Japanese mandate. These islands, in Micronesia, are (1) *The Marshall Islands* (pop. 9,678), with seat of government at Jaluit, (2) *The Caroline Islands* (pop. 38,647), with seats of government at Truk and Ponapé (Eastern group) and Palaw and Yap (Western group), (3) *The Ladrones, or Marianne Islands* (pop. 16,566), with seat of government at Sipan. Estimated rev. and exp (1927-28) for the Pacific Islands, Yen 4,546,526.

CAPITAL OF THE JAPANESE EMPIRE, Tokyo, formerly called Yedo, the residence of the Emperor; population estimated at 2,294,600 (Sept. 1929). On Sept. 1, 1923, a disastrous earthquake destroyed great portions of the cities of Tokyo and Yokohama, but the work of reconstruction is now completed. The chief cities are—

Osaka	2,408,800	Sendai	189,300
Tokyo	2,294,600	Sapporo	181,100
Nagoya	904,700	Hakodate	180,300
Kyoto (ancient capital)	755,200	Kiue	176,900
Kobe	755,200	Kumamoto	162,100
Yokohama	543,900	Osaka	156,800
Hiroshima	276,500	Kagoshima	143,000
Fukuoka	217,800	Yawata	141,900
Nagasaki	199,700	Okayama	136,400

FLAG : White, charged with rising sun (red).

A Baltic Republic at the eastern and southern

shore of the Gulf of Riga, formerly part of the

Russian Empire, its area being about 25,000

sq. miles, with a population of about

2,000,000. Latvia was proclaimed an inde-

pendent state on Nov. 18, 1918. Its frontiers

are common with Estonia, Russia, Poland and

Lithuania. The constitution is that of a

democratic republic, with universal suffrage

and proportional representation. Parliament

(Saeima) consists of a single chamber of 100

members.

The surface of the country is generally flat

with marshy areas, interspersed with many

lakes. Agriculture and dairy farming are the

principal occupations of the people, and there

are many flourishing industries. The fisheries

are also of importance. The chief exports are

flax, timber, butter, paper and glass; chief im-

ports are agricultural machinery and implements

and wood and metal machinery. The tonnage of

ships entered in 1930 was 1,051,848 tons. The

chief ports are Riga, Libau and Windau. In 1930

there were 1,860 miles of railway in operation.

An independent Negro Republic of Western

Africa, occupying that part of the coast of North

Guinea which is between the rivers Cavalla, S.E.,

and Mano, N.W., a distance of about 250 miles,

with an area of about 43,000 square miles, and

extending to the interior to latitude 8° 50', a dis-

tance of 130 miles from the seaboard. It was

founded by the American Colonization Society in

1880, and has been recognised since 1847 as an independent State. The population is estimated at 1,500,000 to 2,000,000, including about 12,000 Americo-Liberians. The principal exports are palm-kernels, piassava, palm-oil, coffee, cocoa, ivory, kola nuts and rubber. The chief imports are rice, tobacco, Manchester goods, provisions, spirits, salt, hardware, glass and earthenware and building materials. The executive power is vested in a President elected for four years, assisted by a ministry; there are two houses of Legislature, the Senate, with 20 members elected for six years, and the House of Representatives with 22 members elected for four years. There is no regular army, but there is an enlisted frontier force of about 600 men under American and native officers. In 1927 arrangements were made with the Finance Corporation of America for a loan of 5,000,000 dollars, and the issue of the first half is to be completed by the end of 1930. The previous 1922 loan, in which British financial interests preponderated, was paid off from the proceeds of the new loan, which is secured by a first lien on customs revenues and head moneys. The Loan Agreement also provides for financial supervision by American officials. There are 15 ports of entry, including 4 river ports, along the 350 miles of coast and 22 interior ports. In 1931, 647 vessels (2,650,032 net tons) entered and cleared at all ports, of these 281 (501,177 net tons) were British.

The independence of the Lithuanian Republic (Lietuva) was proclaimed at Vilna on Feb. 16, 1918. The Republic consists of the former Russian Government of Kovno and portions of the Suwalki and Vilna Governments, and is bounded on the N. by Latvia, on the S. and E. by Poland, and on the W. by Germany and the Baltic Sea, the total area included in the Republic (including Memel Territory) being about 20,000 sq miles, with an estimated population of 2,000,000. Under the Treaty of Versailles Germany renounced the sovereignty over the town and territory of Memel, and a French High Commissioner, with a small garrison, governed the Territory in the name of the Allies until Jan. 1923, when the Territory was invaded and occupied by the Lithuanians. The sovereignty of the Territory has been transferred to Lithuania, as set out in the Convention signed at Paris (May 8, 1924) and ratified Aug. 1925. The total area administered is 945 square miles, with a population of about 150,000, of whom about 36,000 inhabit the town of Memel.

The legislature consists of a single chamber Assembly (*Seim*), elected by universal adult suffrage, the Executive being entrusted to a council of ministers.

The chief industries are agriculture and forestry, the chief products of the Republic being rye, wheat, barley, oats and potatoes; the exports are flax, luscud, timber, livestock, and dairy produce; the chief imports are textiles, sugar, herrings, and machinery.

LUXEMBURG.

(Grand-Duché de Luxembourg.)

Grand Duchess, H. R. H. Charlotte, born Jan. 23, 1856, succeeded (on the abdication of her sister) Jan. 9, 1919; married, Nov. 6, 1919, Prince Felix of Bourbon-Parma. Heir Apparent, Prince Jean, born Jan. 5, 1921. Minister of State, Joseph Bech.

Consulate General in London, Moorfields House, Tenter Street, E. C. 2.

A Grand Duchy in Central Europe, bounded by Germany, Belgium, and France, it formed part of the Germanic Confederation, 1815-66, and was included in the German "Zollverein." In 1867 the Treaty of London declared it a neutral territory under the sovereignty of the King of the Netherlands, on whose decease, Nov. 23, 1890, it passed to the Duke of Nassau. The territory was invaded and overrun by the Germans at the commencement of the war in 1914, but was liberated in 1918, U.S. troops entering the capital on Nov. 22. By the *Treaty of Versailles*, 1919, the country is declared to be free from all ties with Germany. The area is 999 square miles; the population (1930) 299,993, nearly all Roman Catholics. The Grand Duchy is rich in iron-ore. The revenue in 1923 was estimated at 447,041,596 francs, expenditure 413,593,657 francs, debt (Jan. 1, 1923) 486,726,987 francs. There are 328 miles of railway. The army numbers about 300 men. The capital, Luxemburg (population 54,250), is a dismantled fortress.

FLAG: Red, white, blue.

MANCHURIA.

(Manchukuo.)

President (Chih-Cheng = Administrator) of the Manchurian Republic, Henry Pu, born Feb. 7, 1906 (succeeded as Chinese Emperor, Nov. 20, 1909, decree of abdication by Dowager Empress, Feb. 12, 1912). Installed as President of Manchuria, at Changchun, March 9, 1923.

Manchuria lies north-east of China proper, and is bounded north and north-east by Siberia, west by Inner Mongolia, south-east by Chosen (Korea), and south by the Gulf of Pechihli and the Yellow Sea. The new state comprises the following provinces:—

Province.	Sq Miles	Est. Population
Liaoning	71,430	15,000,000
Kirin	103,477	9,000,000
Heilungkiang	225,107	5,000,000

Total..... 400,014 29,000,000

The province of Heilungkiang occupies the greater part of Northern Manchuria, with Tatsihar as capital. Kirin lies to the north-east, with its capital at Kirin. Liaoning (formerly Feng-tien) occupies the southern part, with Mukden as capital, and is separated from Korea by the Yalu river, with a seaboard washed by the Gulf of Pechihli and the Yellow Sea.

Manchuria consists mainly of fertile agricultural land, and about half the cultivable land is worked, principally under soya beans and other pulse, knoiliang (the main food of the people) millet, maize, wheat and rice; cotton and tobacco are also grown. The live stock (1930) included 1,605,000 cattle, 2,438,000 horses, 2,641,000 sheep and 7,507,000 pigs; wool and furs are largely exported, and lumbering is an important industry. Mineral products include salt, coal, iron ore, lead, copper, gold and manganese. There are several well-equipped factories, including oil and flour mills (wheat flour being one of the principal exports), iron works, and silk and other factories. The *South Manchurian Railway* (leased to and worked by Japan), the Chinese Eastern Railway, Peking-Mukden Railway and other lines have a total length of 4,125 miles.

The principal towns are. Mukden, with a population estimated in 1930 at 408,000, Dairen (390,000), Harbin (384,000), Kirin (191,000), Antung (143,000), Port Arthur (135,000), CHANGCHUN, the capital, in the province of Kirin (128,000), Newchwang (110,000) and Tatsihar (50,000). The principal harbours are Dairen (Japanese), Port Arthur and Antung (on the Yellow Sea), and Newchwang (or Kingkow) and Hulatao (on the Gulf of Pechihli).

The finances of the three provinces are estimated in 1929 as under in *silver* Yuan (about 2s. in 1929) —

	Rev	Exp.
Liaoning	35,000,000	32,600,000
Kirin	23,500,000	15,000,000
Heilungkiang	10,222,000	6,354,000

The foreign trade of Manchuria in 1929 was stated at 329,603,866 *Hankow Taels* for Imports, and at 425,651,491 for Exports and Re-Exports, a total of 755,255,356 H.T. In 1929 the exports and re-exports were taken as under:—

Japan	H.T. 168,855,713
China	93,142,958
Russia.....	41,189,754
Gr Britain	28,998,566
U.S.A.	11,944,838
Germany	1,347,965
France	1,152,205
Other Countries	79,119,404

Total. 425,651,491

Consul-General in London, Señor Don Gustavo Luders de Negri, 8 Halkin Street, S.W. 1.

Mexico occupies the southern part of the continent of North America, with an extensive seaboard to both the Atlantic and Pacific Oceans, extending from 15° to 32° 30' N. lat. and 87° to 117° W. long., and comprising one of the richest and most varied zones in the world. It comprises 27 states, 3 territories, and the federal district of Mexico, making in all 31 political divisions, comprehending an area of 768,883 square miles, with a population (1930) of 16,404,030. Mexico is rich in archeological remains, and work is proceeding in every district to remove the earth covering which for many centuries has kept them from view. Near the City of Mexico are a number of pyramids built to a great extent with boulders from the river beds. The *Pyramid of the Sun* (now called "Tonatihu") is 761 feet from N. to S., and 725 feet from E. to W., and rises to a height of 216 feet. The *Pyramid of the Moon* (now called "Mextli") is 426 feet X 511 feet, and rises to 150 feet. The staircases vary in construction between terrace and terrace and are found to be intact. Other places of interest are near Oaxaca, Papantla, Zempoala on the Continent, and Uxmal, Chichen-Itza and other points on the E. side of Yucatan.

The two great ranges of North America, the Sierra Nevada and Rocky Mountains, are prolonged from the north to a convergence towards the narrowing Isthmus of Tehuantepec, their course being parallel with the west and east coasts. The surface of the interior consists of an elevated plateau between the two ranges, with steep slopes both to the Pacific and Atlantic (Gulf of Mexico). In the west is the Peninsula of California, with a mountainous surface, separated from the mainland by the Gulf of California. The Sierra Nevada, known in Mexico as the *Sierra Madre*, terminates in a transverse series of volcanic peaks, from Colima on the west to Citlaltepetl ("El Nevado de Iolua") on the east. The low-lying lands of the coasts form the *Tierra Caliente*, or tropical regions (below 3,000 feet), the higher levels form the *Tierra Templada*, or temperate region (from 3,000 to 5,000 feet), and the summit of the plateau with its peaks is known as *Tierra Fria*, or cold region (above 5,000 feet). The only considerable rivers are the *Rio Grande del Norte*, which forms part of the northern boundary, and is navigable for about 70 miles from its mouth in the Gulf of Mexico, and the *Rio Grande de Santiago*, which runs from Lake Chapala to the Pacific. The remaining streams are governed by the formation of the land, and run in mountain torrents between deep-cut cañons or "barrancaas." The largest fresh-water lakes are *Chapala* (70 miles long and 20 miles wide), and *Patzcuaro* and *Xochimilco*. In the north-west are saline lakes amid bare and dry regions. The climate varies according to the altitude, the rainy season lasting from June to October. Yellow fever sometimes occurs at Merida, Yucatan.

The earliest invaders, or *Toltecs*, gave place in the 13th century to the *Aztecs*, who were conquered in the 16th century by Spanish adventurers under *Hernan Cortes*. Spanish rule was established at *Tenochtitlan*, a 14th century Aztec city (now Mexico), and Mexico remained a Spanish dominion until its freedom was asserted by a revolutionary war, 1810-1821. From 1827-1848 the province of Texas gave rise to hostilities with the United States, terminating in a three years' war and a cession of the disputed territory to the victorious northern States. In 1820 a Republic was proclaimed, but Iturbide declared himself Emperor in 1821. He was shot in 1824, and a Republic was again established. In 1825 the French troops came to Mexico, and in 1864 an Empire under Ferdinand Maximilian of Austria was declared. In 1867 the downfall of the Empire and the death of the Emperor gave rise to the new Republic, which has endured to the present day. The most prominent of modern Presidents is *Porfirio Diaz*, who ruled (except during 1880-4) from 1876 to May 25, 1911. Since the fall of Diaz internal disturbances, in which eleven Presidents have figured, have continued with varying degrees of intensity, and considerable friction (amounting almost to a state of war) has arisen with the United States. On July 15, 1914, Venustiano Carranza assumed control of the executive, but his anti-foreign attitude and legislation, together with the seizure of many properties (a few of which belonged to British subjects) led to a refusal of the British Government to grant recognition of his administration. The degree to which Carranza departed from his declaration of neutrality during the Great War undoubtedly influenced the British Government when this policy was adopted. Carranza was overthrown by a further revolution in 1920, and is believed to have been shot by the insurgents. After the fall of Carranza the executive power was assumed by de la Huerta as provisional President, and on Dec. 1, 1920, General Obregon, whose *coup d'état* had caused the downfall of Carranza, became head of the Republic. The determination of the new government to uphold the Carranza constitution of 1917, which has led to confiscatory measures in connection with nationalization of the petroleum of the country, and contains (among other departures from the accepted comity of nations) provisions which restrict the rights of foreigners, caused the British, American, French and Belgian governments to adopt a policy of non-recognition of the Obregon administration. The expropriation, without payment of compensation, of several hundreds of private properties, in pursuance of the Obregon agrarian policy, called forth strong protests from foreign Powers, but all the Powers except Great Britain eventually recognised the Obregon administration. General Obregon was afterwards assassinated. In 1925 relations between Great Britain and Mexico were re-established, and an Anglo-Mexican Special Claims Commission has since met and concluded its labours in February, 1923.

Vera Cruz, Tampico, Progreso, and Puerto Mexico are the chief ports on the Atlantic or Gulf of Mexico, and Acapulco, Manzanillo, Mazatlan, Salina Cruz, and Guaymas on the Pacific.

* The remains of *Hernan Cortes* have been definitely located in the Temple of Jesus, Mexico City. They are contained in a marble vault, with the funeral garments.

There were 16,110 miles of railroad open on Sept. 1, 1926, and 54,670 miles of telegraph. The railroads have in a large measure been built by American and English companies. The Highway Commission of Mexico had constructed (to Dec. 31, 1926) 247 kilometres of road, finished with asphaltic treatment; 322 kilometres lacking only bituminous treatment, and 700 kilometres open to traffic, but still in various stages of construction. There is a network of 50,000 kilometres of old roads, of which about 12,000 are impassable. It is proposed (1932) to spend 130,000,000 pesos on the completion of 9,000 kilometres of highways throughout the Republic. The international highway from Laredo, Texas, to Mexico City is passable during the dry season (Nov. to May) only. The city of Mexico is linked with Puebla, Tampico, Vera Cruz, Toluca, and Saltillo by telephone; the line is now extended to the U.S. border and thence is connected to Canada and Europe. The city is connected by wireless to U.K. and Europe. The principal air routes from Mexico City are to Brownsville and El Paso (Texas), to Mérida (Yucatan) and to Mazatlán (Sinaloa) *via* Torreón.

The principal agricultural crops are maize, beans, wheat, barley, Chile-pepper, sugar, coffee, cotton, tobacco, vanilla, flax, grapes, and all kinds of tropical fruit. The magney, or Mexican aloe, yields a favourite beverage, "pulque", other species of the same plant supply pita-flax and sisal-hemp (henequen). The forests abound in mahogany, rosewood, ebony, and moutchouc trees. The mineral wealth is very great, silver and gold, copper, lead, and quicksilver, iron and coal, are the leading products of the mines, and Mexico produced 50,150,610 barrels of petroleum in 1928. The mineral production is stated at—

Mineral	Kilograms	
	1930	1931
Gold	20,808	19,700
Silver	3,272,288	2,730,652
Lead	332,930,625	231,848,320
Copper	73,411,608	55,542,754
Zinc	124,083,519	124,781,093
Mercury	166,241	259,261
Antimony	3,032,211	5,653,722
Arsenic	9,976,791	6,747,368
Graphite	5,852,507	3,258,175

Petroleum Production			
Year	Barrels	Year	Barrels
1927	64,120,000	1930	39,600,000
1928	50,151,000	1931	33,050,000
1929	44,688,000		

Woolen and cotton spinning and weaving, the making of footwear, and other branches of industry, are encouraged by high protective duties. The imports, nevertheless, consist very largely of textile manufactures. Of the exports 20 per cent. consist of silver and gold, while 35 per cent. represents the value of petroleum and its derivatives, mainly shipped from Tampico. Other important exports are copper, lead and zinc also sisal hemp (henequen), coffee, cotton, resins, fresh vegetables and dried vegetables.

The monetary system has now been placed on a silver basis, with a silver peso = 50 cents U.S.

currency or 24.25d., but in actual fact is worth less than 30 cents U.S. gold, there is a large amount of silver currency in circulation. In Sept. 1922, the Mexican Government undertook to set aside for the service of the debt the sum of 30,000,000 gold pesos in 1923, rising by 5 million gold pesos annually to 50 million gold pesos in 1927. However, this agreement with the International Commission of Bankers was amended in 1925, after the Government had found it necessary to suspend the service of the debt in June, 1924. The effect of the 1925 agreement was to eliminate the debt of the National Railways of Mexico from the public debt, thereby reducing this from 1,562 million Mexican gold pesos to 890 millions, as at Dec. 31, 1925. Furthermore, the 1925 agreement provided for the postponement of payment of the 75 million pesos (which had not been met in 1924 and 1925) until 1928-1935. Service of the debt was resumed in 1926, but again suspended; a further agreement was signed on Dec. 22, 1931, providing for resumption of payments on Jan. 1, 1934. In addition to the 890 millions above mentioned, other items which had not been included in the debt agreement of Sept., 1922, as amended in 1925, amounted to 128 millions as at Dec. 31, 1925, thus making a grand total of 998 million pesos Mexican gold. A total sum of \$45,000,000 has been received by the committee of bankers. The total debt, funded and floating and interest, was stated to be \$1,253,105,699 as at Dec. 31, 1928.

The language of the country is Spanish.

Estimated revenue	(1932)	\$223,074,000
Estimated expenditure	(1932)	215,217,481
Total Exports	(1930)	458,674,450
Total Imports	(1930)	350,173,420

Imports from U.K.	1930	£2,433,505	1931	£2,978,370
Exports to U.K.		2,866,482		2,398,986

CAPITAL, Mexico City Pop. (1930), 968,449. Other towns are Guadalajara (145,000), Puebla (96,000), Monterey (88,000), San Luis Potosí (57,000), León (57,000), Vera Cruz (54,000), Toluca (50,000), Aguas Calientes (48,000), Saltillo (40,000).

MONACO

(Principauté de Monaco.)

Sovereign Prince, Louis Honoré Charles Antoine,
 born July 12, 1870, acc. June 26, 1922.

Heiress Apparent, Hereditary Princess Charlotte
 Louise Juliette (Duchess de Valentinois), born
 Sept. 30, 1898; mar. March 19, 1920, Prince
 Pierre de Monaco (Count de Polignac), and has
 issue a daughter, Princess Antoinette, born
 Dec. 28, 1920, and a son, Prince Rainier, born
 May 31, 1923.

Minister of State, Monsieur Maurice Bouillon-
 Lafout.

Secretary of State, M. François Roussel.

Consul-General in London, C. Nuthall Foleman,
 37 Conduit Street, W. 1.

Chancellor, Charles E. Isbell.

A miniature Principality on the Mediterranean,
 with land frontiers joining France at every
 point, and consisting of the old town of Monaco,
 La Condamine, and Monte Carlo, where is the
 famous casino. The Principality comprises a
 narrow strip of country about 3 miles long and
 1½ miles broad, with (1927) 24,927 inhabitants,
 and a yearly average of over 1,500,000 visitors.
 The whole available ground is built over, so that
 there is no cultivation. There is a small harbour
 (24 ft. alongside quay), and the import duties are
 the same as in France. There is a local police
 force of 200 men.

CAPITAL, Monaco.

FLAG. Red and white.

MOROCCO.

(Moghreb el akas "The Farthest West")

French Protectorate, and Spanish and Interna-
 tional Tangier Zone.

Sultan, Sidi Mohamed, born 1909; proclaimed
 Nov. 20, 1927.

Morocco, the largest of the Barbary States,
 is situated in the north-west of the African Con-
 tinent, between 27°-36° N. lat. and 1°-11° 40' W.
 long., with a total area estimated at 228,525
 square miles, and a population of about 5,300,000.
 Morocco is traversed from the Atlantic coast in
 the south-west to the Algerian frontier in the
 north-east by five parallel ranges, known
 generally as the *Atlas Mountains*. Between
 the various ranges lie well-watered and fertile
 plains, the lower slopes of the northern

flanks of the mountains being well wooded,
 while the southern slopes are exposed to the
 dry winds of the desert and are generally arid
 and desolate. The most northerly point of
 Morocco is the peninsula of Ceuta, which is
 separated from the Continent of Europe by the
 narrow strait of Gibraltar. The Jebel Musa
 dominates the promontory, and with the rocky
 eminence of Gibraltar was known to the ancients
 as *The Pillars of Hercules*, the western gateway
 of the Mediterranean. Between 32° N. and
 36° N is the headland Ghir, which encloses
 a bay containing the port of Agadir, formerly
 known as the "Gate of the Sudan."

The climate of Morocco is generally good and
 healthy, especially on the Atlantic coast, the
 country being sheltered by the Atlas Mountains
 from the hot winds of the Sahara. The extremes
 of temperature in Tangier and Mogador are 92°
 Fahrenheit in the summer and 37° in the winter,
 with a rainy season from November to April,
 but the summer-heat figures at all the inter-
 vening ports (Larache, Kenitra-Mehedia, Rabat-
 Sale, Fedalah, Casablanca, Mazagan, and Safi)
 are markedly higher; the last-named port being
 the hottest. The Mediterranean coast is drier
 and less temperate, but not unhealthy, while
 the plains of the interior are intensely hot.

Government.—France is the paramount power,
 and represents the Sultan of Morocco in all
 foreign relationships, but the country is divided
 into three zones—the *French Zone*, the *Spanish*
Zone, and the *International Tangier Zone*. Spain
 has had relations with Morocco for many cen-
 turies. The northern portion of Morocco, as defined
 in the Franco-Spanish Treaty of 1912, forms a
 Spanish "sphere of influence" which extends
 over the whole of Northern Morocco, with the
 exception of the International zone round
 Tangier. In this sphere occurred the joint
 Franco-Spanish military operations against
 Abd el Krim, the Riff leader, which culminated
 in the surrender of Abd el Krim in May, 1926,
 and the final pacification of the French
 and Spanish zones in the following year.
 Ceuta (on the Mediterranean coast, opposite
 Gibraltar), in 35° 54' N. lat. and 5° 18' W. long.,
 has been a Spanish possession since the close of
 the 16th century, and forms part of the adminis-
 trative province of Cadiz, and the adjacent Alhu-
 cema and Zaffarin islands are Spanish possessions.
 A special international régime was designed for
 Tangier before the War by negotiations between
 the British, French and Spanish Governments,
 but the outbreak of the War prevented this
 régime from being put into operation. A new
 Convention instituting the *International Zone*
 of Tangier was, however, signed by the three
 governments at Paris on Dec. 28, 1923, and was
 brought into force on June 1, 1925. The Con-
 vention was modified by a Protocol signed at
 Paris, July 25, 1928, by the three Powers and
 Italy, who thereby adhered to the Convention.
 Both instruments have been adhered to by
 Belgium, The Netherlands, Portugal and Sweden,
 but the United States have not yet (Aug., 1928)
 signified their acceptance, and therefore retain
 their Capitulatory rights in the International
 Zone. The Convention provides for a complete
 international administration of the zone, except
 as regards native affairs, which are reserved to
 the Shereefian authority.

Production, Industry, &c.—Among the agri-
 cultural products are wheat, barley, maize,
 beans, peas, birdseed, linseed, coriander, cum-

min, fenugreek, esparto, and hemp, and the northern slopes of the Atlas produce many fruits, principally figs, almonds, pomegranates, lemons, olives, oranges, and grapes, the latter growing also in the plains. The live stock includes large quantities of horses, cattle, sheep and goats, while the egg industry is of importance. Important deposits of coal, manganese, iron ore, lead and zinc, as well as other minerals in smaller quantities, have been prospected, but their exploitation awaits transport facilities. Gold and silver are also found. Phosphates are exported in increasingly large quantities and constitute a great source of wealth for the French zone. The trade of Morocco is chiefly with France and Algeria, Great Britain, Italy and Spain, the chief imports being cottons, sugar, motor vehicles, petroleum, building materials, and soft goods, the exports being grain, phosphates, eggs, hides and skins, and wool. The unit of currency in the French protectorate is the Moroccan franc, which is closely allied to the French franc, while in the Tangier zones the franc, the *peseta* and the *Hasani peseta* are all current, and in the Spanish zone the two last of these currencies.

Communications.—The French Protectorate authorities are engaged in the serious development of normal gauge railways in their zone, and (Oct. 1931) 1,140 kilometres of normal and 1,300 kilometres of narrow gauge track are in working order. In addition, the completion of the Tangier-Fez full gauge system gives through service between Tangier and the principal towns of the French zone. Telegraphic communication is established by submarine cables from Tangier to Cadiz, Gibraltar, Rio Martin, Melilla, Tarifa and Oran, also between Casablanca and Brest. There are wireless stations at Tangier, Tetuan (military), Rabat, and Casablanca, inland lines have been built by the French connecting all important places in their zone, as well as to the borders of the Spanish zone, and the latter line is being extended to Tangier. The chief roads in the Tangier and Spanish zones are those linking Tangier to Ceuta and Tetuan in the North, and to Arzila, Larache, and the French zone in the South. The French zone is well equipped with good main and secondary roads. *Air Services* are maintained between Casablanca and Toulouse (daily), and Casablanca and Dakar (weekly).

The principal *Harbours* are Casablanca, and Ceuta (for Tetuan), Tangier, Larache, Rabat, Mazagan, Saffi, Kenitra, and Mogador.

External Trade—The imports into the French Zone in 1931 were valued at 1,083,292,000 francs, and exports from French zone, 1931, 766,042,000 francs. The imports into the Tangier Zone (1931) were valued at 93,229,030 francs and the exports from the zone at 22,276,275 francs. No customs statistics for the Spanish Zone have been published for many years.

CAPITAL of French zone, Rabat, population 52,000 (Fez in the North, and Marrakesh in the South being the old capitals of the Sultans). The French Resident-General is M. Lucien Saint.

CAPITAL of Spanish zone, Tetuan, population 10,000 (principal ports, Larache and Rio Martin, for Tetuan).

CAPITAL of International zone, Tangier, population 45,000.

Other towns (with populations exclusive of French army of occupation) are Fez (107,843),

Marrakesh (193,582), Meknes (52,770), Salé (25,821), Casablanca (161,113), Rabat, with Salé (77,821), Mazagan (19,601), Saffi (26,128), and Oudjda (29,220).

NETHERLANDS (or HOLLAND).

(Nederland.)

Queen, Wilhelmina Helena Pauline Maria, born August 31, 1880, succeeded her late father, King William III, Nov. 23, 1890, mar., Feb. 21, 1901, H.R.H. Prince Henry, Prince of the Netherlands and Duke of Mecklenburg.

Heiress Apparent, Princess Juliana of Orange-Nassau, Duchess of Mecklenburg, born April 30, 1909.

Queen-Mother, Emma, Princess of Waldeck and Pyrmont, born August 2, 1858; married the late King, Jan. 7, 1879, who died November 23, 1890, acted as Regent 1890-1898.

MINISTRY (July, 1929)

Prime Minister and Minister of the Interior, Jonkheer Maitre Ch. J. M. Buys de Beerenbrouck.

Finance, Jonkheer Maitre D. J. de Geer.

Foreign Affairs, Jonkheer Maitre F. Beelaerts van Blokland.

Colonies, S. de Graaff.

Justice, Maitre Dr. J. Donner.

Defence, Maitre Dr. L. N. Deckers.

Ways and Communications, Maitre P. J. Keymer.

Education, Sciences and Art, Maitre J. Terpstra.

Labour, Commerce and Industry, Maitre T. J. Verschuur.

Minister in London, Jonkheer Maitre B. de Maere van Swinderen, 21 Portman Square, W. 2.

Chancery, 21A Portman Square, W. 2.

1st Secretary, J. J. B. Bosch Chevalier de Rosen-thal.

Commercial Attaché, F. B. s' Jacob.

Consul-Gen., Th. H. de Meester, 28 Langham Street, W. 1.

Vice-Consul, D. E. E. Middelburg

Agricultural Adviser, B. Gerritzen.

A maritime Kingdom of Central Europe, situate on the North Sea, in lat. 50° 46'—53° 34' N and long 3° 22'—7° 24' E, consisting of 12 provinces, and containing a total area of 12,761 square miles, with a population, May 1, 1931, of 7,938,114. The majority, about 55 per cent., belong to the several Reformed Churches, and the remainder are Roman Catholics, with about 115,000 Jews. The land is generally flat and low, intersected by numerous canals and connecting rivers—in fact, a network of water courses. The highest point is at Vaals, 656 ft. above mean sea level, but almost half the country is below the mean level of the sea. The principal rivers are the Rhine, Maas, and Yssel, with the mouths of the Schelde. The chief native products are herrings and other fish, cattle, horses, swine, sheep, poultry, eggs, seed, potatoes, oats, rye, wheat, barley, beans, peas, buckwheat, sugarbeet, chicory, flax, hemp, tobacco, bulbs and dairy produce. The principal manufactures are shipping, bricks, margarine, cocoa, chocolate, linen, rich damasks, cottons, woollens, cigars and other manufactured tobacco, candles, confectionery, earthenware and pottery, glass bottles and ware, sugar, chemical and pharmaceutical products, matches, perfumery, bicycles, boots and shoes, starch, potato flour, engines, metal substances, iron and steel, wireless sets and parts, works of art in gold and silver, incandescent lamps, wireless apparatus and parts, machinery, motors, paper, printing, oils, beer, "geneva" and other liqueurs. Coal production (1930) 12,221,000 tons. Diamond-cutting employs numerous hands in Amsterdam.

Communications.—The total extent of canals is about 1,250 miles. There were 2,200 miles of railroad open in 1929, 1,230 miles of telegraph cable, and 2,782 miles of telephone cable. The mercantile marine, on Jan. 1, 1931, consisted of 902 steam and motor vessels of 6,944,000 cubic metres gross. In 1930 about 20,000 vessels (84,714,000 tons) entered and cleared at the various ports. An Act for the damming and draining of the Zuyder Zee was passed in 1918, and work is now in progress, the dam is expected to be completed in 1932.

Defence.—The Home Forces consist of a conscript army, with an annual levy of 19,500 men, producing a first-line army of 270,000, or (including reserves) 350,000 all ranks. The Royal Navy consists of 11 protected and 58 unprotected vessels.

Education.—Private State-aided primary instruction is encouraged rather than public, though the latter is provided if required, by local taxation. The average attendance at primary schools is 96 per cent. Secondary schools for working classes are numerous, well equipped and attended. The principal Universities are at Amsterdam, Groningen, Leiden, Nijmegen (R.C.) and Utrecht, and there are technical universities at Delft (polytechnic), Rotterdam (commercial), Wageningen (agriculture), and Utrecht (veterinary).

Revenue (Budget) fl. 644,268,000
Expenditure (Budget) ... 593,654,000

Public Debt (1931):—

Interest-bearing Funded fl. 2,461,700,000
Non-interest-bearing Floating .. 295,000,000

Imports fl. 2,428,300,000
Exports 1,780,000,000
Imports from U.K. £23,009,000
Exports to U.K.... 39,523,000

COURT CAPITAL, The Hague Pop (1930), 443,000.

COMMERCIAL CAPITALS, Amsterdam, population (1930), 755,000; and Rotterdam, population (1930), 586,000; other large towns are Utrecht (155,000), Groningen (105,000) and Haarlem (119,000).

BRITISH LEGATION.

NETHERLANDS COLONIES.

I Netherlands East Indies—

"Netherlands India" comprises the islands of *Java* and *Madura*, the island of *Sumatra*, the *Riouw-Louga Archipelago* (which with *Karimoon*, *Anambas*, *Natuna Islands*, *Tambelan*, and part of *Sumatra*, forms the "Residency of Riouw"), the islands of *Bangha* and *Billiton*, part of the island of *Borneo*, *Célebes Island*, the *Molucca Islands* (*Ternate*, *Halmahera*, *Buuu*, *Ceram*, *Banda*, *Timor-Laut*, *Larat*, *Bachiam*, *Obi*, *Kei*, *Aru*, *Babar*, *Leti* and *Wetar*), part of *New Guinea*, part of *Timor Island*, and the islands of *Bali* and *Lombok*, with a total area of 730,000 sq. miles, and a population estimated at 53,000,000. The administrative capital is *Batavia* (pop. about 260,000).

Governor-General, Jonkheer Dr. B. C. de Jonge, appointed 1931.

Java and *Madura* (51,000 sq. miles, pop. 1930, 40,000,000) furnish sugar, tobacco, tea, coffee, tin, rubber, and other products for exportation. The "outlying" islands are frequently administered by their own princes, subject to the directions of a Netherlands Resident. There was (1929) a colonial army of 1,293 officers and 37,100 men. The colonial revenue for 1931 was estimated at fl. 833,524,000 and the expenditure at fl. 887,102,000. The trade of Netherlands India was valued in 1929 at fl. 1,487,802,000 for exports and at fl. 1,166,305,000 for imports. The trade with Great Britain in 1930 was valued at £4,510,420 for imports from, and at £6,586,271 for exports to Great Britain.

BRITISH CHAMBER OF COMMERCE FOR NETHERLANDS E. INDIES, *Batavia, Java*

II Netherlands West Indies—

"Netherlands West Indies" comprise the mainland colony of *Surinam* ("Dutch Guiana") in South America, and certain islands in the West Indies known as the "Colony of Curaçao" (*Curaçao*, *Bonaire*, *Aruba*, part of *St. Martin*, *St. Fustatius*, and *Saba*) with a total area of 400 sq. miles, and a population estimated (1929) at 65,750. The administration capital of *Surinam* is *Paramaribo* (pop. 50,000); the capital of *Curaçao* is *Willemstad* (pop. 21,000).

NICARAGUA.

(República de Nicaragua.)

President (1929-1932), Señor Don José María Moncada, assumed office Jan. 1, 1929 (until Dec. 31, 1932).

Minister in London, Señor Don Eduardo Pérez-Triana, 4 Moorgate, E.C. 4.
 Vice-Consul, F. V. Cook, 15 Union Court, E.C. 4.

The largest State of Central America, with a long seaboard on both the Atlantic and Pacific Oceans, situate between 9° 45'–15° N lat and 85° 40'–87° 38' W. long., containing an area of 51,660 English square miles and a population (1930) of about 750,000, of whom about three-quarters are mixed blood and the rest Indians, including the Mosquitos, who dwell on the Atlantic littoral and were formerly under British protection.

Nicaragua was discovered by Columbus in 1502, and was overrun by the Spaniards under

Dávila in the first quarter of the 16th century, forming part of the Spanish Captaincy-General of Guatemala until 1821, when its independence was secured. The present constitution rests on the fundamental law of Nov. 10, 1921 (amended 1932) and is that of a centralised republic. The President is elected by direct suffrage for four years.

The chief products are coffee, bananas, sugar, timber (cedar, mahogany, rosewood, &c.), tobacco, maize, rice, beans, cocoa, hides, gold and silver. Considerable quantities of foodstuffs are imported as well as cottons and other manufactures, principally from the United States, which also take the greater part of the exports.

There are (1930) 160 miles of railway, 2,824 miles of telegraph and 3,226 miles of telephone, and a powerful wireless station was completed at Managua in 1924. Good roads are very few, and transportation, especially in the rainy season (May-Nov.), is attended with great difficulties.

Corinto, on the Pacific coast, is the chief port of the country, handling about 70 per cent. of the total trade. Bluefields and Puerto Cabezas, on the E. coast, are mainly concerned with the shipment of bananas and timber to New Orleans. Owing to defective communications the Atlantic littoral is practically isolated from the rest of the Republic and the chief centres of population.

Education is backward, at least 60 per cent. of the population being illiterate.

The official language of the country is Spanish.

	1930	1931
Public revenue	*(\$4,623,420	*\$3,934,184

Consul-General, G. Conradi.

Vice-Consul, Stig Thobroe Olmer.

Norway, an independent kingdom, founded in 872 (fundamental law of May 17, 1814), was united with Sweden under the same King from Nov. 4, 1814, to June 7, 1905, when the union was dissolved. The Parliament of 150 members is called the "Storting," which is divided into two sections, chosen by itself to discuss projected Bills, called "Odelsting" and "Lagting." Norway, the western and northern portion of the Scandinavian peninsula, is about 1,100 miles in length, its greatest width about 250 miles. It is divided into 20 provinces, or fylker, and comprises an area of 124,455 sq. miles with a population (1931) of 2,831,267. The coast-line is extensive, deeply indented with numerous fjords, and fringed with an immense number of rocky islands. The surface is mountainous, consisting of elevated and barren tablelands, separated by deep and narrow valleys. The cultivated area is about one-fortieth part of the country; forests cover nearly one-fourth; the rest consists of highland pastures or uninhabitable mountains.

The chief industries are agriculture and forestry, manufactures, fisheries and shipping. Agriculture and forestry give employment to one-third of the population. Manufactures are aided by great resources of water power, estimated at 9,200,000 kw., of which 13 per cent are utilized. The quantity of fish caught by Norwegian fishing vessels is of late years greater than that of Gt. Britain, and more than 60 per cent. of the whole oil production of the world is from Norwegian Companies. The imports consist chiefly of foodstuffs, raw materials for the manufacturing industries and coal and fuel oil. The chief exports are fish, oil, and other products of the fisheries, condensed milk, tinned goods, pulp, paper, iron ore and pyrites, stone, cement, calcium carbide, nitrate of soda, aluminium, ferro-alloys, nitrate of lime, zinc, cyanide, &c.

Defence.—Service in the National Militia is universal and compulsory. The peace strength is about 10,000 all ranks. In time of war all males between the ages of 18 and 55 are liable for service. The Navy consists of 4 ironclads, 17 torpedo-boats, 3 destroyers, 9 submarines, and several minelayers. There are 60 seaplanes and aeroplanes.

Education is compulsory and free between the ages of 7 and 14, schools being maintained by

local taxation with State grants in aid. The attendance is high. Secondary schools are provided by the State, by local authorities, and privately. There are many special schools and industrial and technical institutes. The University of Oslo was attended in 1931 by 3,615 students.

Communications.—The total length of railways open in 1931 was 2,407 miles, of which 229 miles were private lines. The length of telegraphs and telephones in 1931 was 35,625 miles (State, 22,320) with 580,400 miles of wire (State, 423,250 miles). The mercantile marine, Jan. 1, 1932, consisted of 4,000 vessels, of 2,401,700 net tons. The gross earnings of the Norwegian mercantile marine in foreign traffic amounted in 1931 to about 411,500,000 kroner.

SVÅLBARD

(Spitsbergen and Bear Island)

By Treaty (Feb. 3, 1920) the sovereignty of Norway over the Spitsbergen ("Pointed Mountain") Archipelago was recognised by the Great Powers and other interested nations, and on Aug. 14, 1925, the Archipelago was officially taken over by Norway.

The Svalbard Archipelago lies between 74°-87° N. lat. and between 10°-35° E. long., with an estimated area of 24,295 square miles. The archipelago consists of a main island, known as West Spitsbergen (15,200 sq. miles); North East Land, closely adjoining and separated by Hinlopen Strait; the Wiche Islands, separated from the mainland by Olga Strait; Barents and Edge Islands, separated from the mainland by Stort Fjord (or Wybe Jansz Water); Prince Charles Foreland, to the W.; Hope Island, to the S.E.; Bear Island (68 square miles) 127 miles to the S.; with many similar islands in the neighbourhood of the main group. The principal mineral is coal. In 1931 the coal export was about 206,000 tons. The wintering force in 1931-32, was 436 strong; the archipelago is also visited by hunters for seal, foxes and polar bears.

Svalbard revenue (1932-33)kröner 70,000
 do. expenditure (1932-33)" 70,000

South Cape is 370 miles from the Norwegian Coast. Ice Fjord is 520 miles from Tromsø, 650 miles from Murmansk, and 1,300 miles from Aberdeen. Transit from Tromsø to Green Harbour (the postal station, with a high-power Telefunken wireless station) 2½ to 3 days; from Aberdeen 5 to 6 days.

JAN MAYEN, an island in the Arctic Ocean (70° 49'-71° 9' N. lat. and 7° 53'-9° 5' W. long.) was joined to Norway by law of Feb. 27, 1930.

BOUVET ISLAND, in the Antarctic (54° 26' S. lat. and 3° 24' E. long.) was declared a dependency of Norway by law of Feb. 27, 1930.

PETER I'S ISLAND, in the Antarctic (68° 50' S. lat. and 90° 35' W. long.) was declared a dependency of Norway by resolution of Government, May 1, 1931.

OMAN, *See* Arabia.

PANAMA

(República de Panamá.)

President (1932-1936), Señor Dr. Don Harmodio Arias, assumed office Oct. 1, 1932.
Secretary of Government and Minister of Justice, Señor Colonel Don Juan Antonio Jiménez.
Foreign Affairs, Señor Don Juan Demóstenes Arosemena.

Minister in London, Señor Don Narciso Garay (resides in Paris).

Consul-General in London, Señor Don I. J. Valdés, Jr., 232 Finsbury Pavement House, E.C.2.

Panama, formerly one of the nine Departments of Colombia, revolted in Nov. 1903, and established a separate Government. The area of the Republic is 31,800 square miles, the population 442,486 (excluding Canal Zone). The soil is extremely fertile, but there is little cultivation and nearly one-half of the land is uncultivated. The chief crops are bananas, coconuts, cacao, coffee, and cereals. The imports are almost entirely manufactured goods and foodstuffs. A railway 47 miles in length joins the two oceans. Revenue (Budget March 31, 1931-Feb.

28, 1933)	£4,107,268
Expenditure (Budget March 31, 1931-Feb. 28, 1933) ..	£4,107,268
Imports (1931) ..	\$13,429,450
Exports (1931) ..	\$2,607,712
Imports from U.K. (1931) ..	\$1,029,895
Exports to U.K. (1931) ..	\$215,429

The total value of supplies purchased for the Canal Zone Commisaries for the fiscal year ended June 30, 1931, was \$7,275,827 (U.S. \$.).

The language spoken is Spanish.

CAPITAL, Panama. Population (1930), 82,827.

PAPAL STATE, The.

(Stato Città Vaticana.)

Sovereign Pontiff (26th), His Holiness Pope Pius XI (Achille Ratti), born at Desio, March 31, 1857, elected Pope (in succession to Benedict XV.) Feb. 6, 1922.

The office of the ecclesiastical head of the Roman Catholic Church is vested in the Pope of Rome, who is the Sovereign Pontiff of the Western Church. The Papal States were incorporated with Italy from 1860 to 1870, and the territory of the Papacy was confined to the palaces of the Vatican and the Lateran and the Villa of Castel-Gandolfo. In 1870 the incorporation of the Papal States in Italy left the temporal power of the Pope in suspense until the treaty of Feb. 21, 1929, which recognised the full and independent sovereignty of the Holy See in the City of the Vatican. Accompanying the treaty were conventions regulating the condition of religion

and of the Catholic Church in Italy and agreeing to pay 750,000,000 lire in cash and the income at 5 per cent on 1,000,000,000 lire state bonds as a final settlement of the claims of the Holy See against Italy for the loss of temporal power.

PARAGUAY.

(República del Paraguay.)

President (1922-36), Dr. Eusebio Ayala.

Vice-President, Dr. Raul Casal Ribello

Interior, Dr. Narciso Mendez Benítez.

Foreign Affairs, Dr. Justo Pastor Bonítez.

Finance, Don Benjamin Banks.

Justice and Instruction, Dr. Justo Prieto

War and Marine, Dr. Victor Rojas.

Minister in London (vacant).

Consul-General in London, Señor Dr. Don Rogelio Espinoza, 12 Russell Square, W.C. 1

An inland State of South America, situate between 20°-6° 30' S. lat. and 54°-62° W. long. The area of Paraguay (exclusive of the Chaco)

is computed at 61,600 square miles, and it contains a population estimated in 1930 at about 850,000.

Paraguay was visited in 1527 by Sebastian Cabot, and in 1535 was settled as a Spanish possession. In 1811 Paraguay declared its independence of Spain, and from 1814-1840 was governed by Francia, a Paraguayan despot, who was succeeded by Lopez, 1840-1862. In 1862 Francisco Solano Lopez succeeded his father, and in 1864 declared war against Brazil, Argentina and Uruguay being involved in the struggle. Against these three nations Lopez conducted a five years' war, which terminated in his defeat and death at the *Battle of Cerro Cori*, March 1, 1870. This dogged struggle reduced the country to complete prostration, and the population, which was 800,000 in 1857, is alleged to have fallen in 1870 to 250,000, of whom barely 30,000 were men. The present constitution was adopted at the close of the war, and under its provisions the head of the executive is the President, elected by an electoral college for four years and ineligible for office for eight consecutive years after the expiration of his term. A Vice-President is similarly elected, and succeeds automatically in the case of the death, expulsion or absence of the President. There is a Cabinet of 5 members.

Paraguay proper consists of a series of plains, intersected by abrupt ranges of hills, some of which reach an altitude of 2,000 to 3,000 feet above sea level. The Paraguay and Alto Paraná rivers are navigable at all seasons for vessels of 6 to 7 feet draft. Many of the tributary streams are also navigable for much of the year. The Pilcomayo river is navigable for small craft for 180 miles from Asunción; but is liable to shrink unduly with drought. Paraguay is a country of grassy plains and dense forest, the soil being marshy in many parts and liable to floods, while the hills are covered for the most part with immense forests. The streams flowing into the Alto Paraná descend precipitously into that river. In the angle formed by the Paraná-Paraguay confluence are extensive marshes, one of which, known as "Neembucu," or endless, is drained by *Lake Ypoa*, a large lagoon, south-east of the capital. The *Chaco*, lying between the rivers Paraguay and Pilcomayo and bounded on the north by Bolivia, forms the subject of a long standing dispute with that country; it is practically a dead level, though a slight and uniform rise westward is now known to exist, and suffers much from floods and still more from drought.

The chief agricultural products are tobacco, oranges and cassava (manioc), maize, rice, sugar-cane, ground-nuts, and other tropical and sub-tropical plants. The forests contain many varieties of timber, but only cedar and a few of the best known hardwoods find a market abroad. Stock-raising, lumbering, cotton and tobacco growing, and the gathering of *Yerba* (Paraguay tea), are the principal industries. The chief articles of export are hides, timber, yerba maté, tobacco, quebracho extract, cattle and meat products, oranges, and petit grain oil. The Army numbers 2,000 to 3,000 men. A railway, 232 miles in length, which belongs to an English company, connects Paraguay with the Argentine railway system. The journey from Asunción to Buenos Aires (285 miles) occupies 53 hours. Train ferries enable the run to be accomplished without break of bulk. River

* Adrian IV (Nicholas Brakespearo, the only Englishman elected Pope) was born at St. Albans, elected Pope (on the death of Anastasius IV) in 1154; died 1159.

steamers also connect Buenos Aires and Asuncion (3 to 5 days). The language is Spanish.

Consulate-General, 20 Prince's Gate, S.W. 7. [Kens 3241]

Consul, (vacant)

Persia—called by the natives Iran—comprises an area of 628,000 sq. miles, with a population estimated at 20,000,000.

Persia is mostly an arid table-land, enclosed, except on the east, by mountains,

those in the north rising to 18,700 ft. The central and eastern portion is a vast salt desert. The only navigable river is the Karun, which was opened to foreign navigation from Moham-meral to Ahwaz in 1888. Caravans and pack-animals are also being superseded by motor transport of passengers and goods on the road between Tehran-Khankin, Tehran-Pahlavi (Enzeli), Tehran-Tabriz, Tehran-Meshed, Meshed-Zahedan (Duzdagh) and Tehran-Bushire. There are 334 miles of railway open, including 80 miles in the North from Aliabad Shahi to Bander Shah, and 156 miles in the South from Bander Shapur to Dizful.

The chief products are cereals, cotton, gums, dried fruits, silk, tobacco, and opium. The minerals (little worked) are salt, iron, coal, copper, lead, sulphur, &c., with turquoises. Oilfields in Southern Persia have been successfully worked by an English company since 1902. The only important manufacture is that of woollen carpets (mostly a domestic industry), but shawls, silks, and cotton fabrics are also produced. There are extensive forests in the north and west. Sheep and goats are numerous, and good wool is produced. The Persians are mostly Shah Muhammadans; but there are many adherents of Bahaism (an eclectic form of Deistic religions), and Armenian Christians. The laws and popular education are based on the precepts of the Koran, but efforts are being made to approximate the educational system more closely to European models. Persia is divided into provinces, of which the principal are under Governors or Governors-General.

Owing to increasing popular discontent with a corrupt and incompetent administration and an extravagant Court, a nationalist movement began in Dec., 1905. In Aug., 1906, the Shah, Muzaffer-ud-Din, admitting the need for reforms, granted a Constitution. He was succeeded in 1907 by his son Muhammad Ali Shah, who was deposed by the National Assembly in 1909, to be succeeded by his son, Sultan Ahmad Shah (under the regency of Nasir-ul-Mulk, until 1914). As a result of the energy of Prime Minister H. H. Reza Khan the authority of the Persian Government was re-established over almost the whole of Persia by means of a disciplined army of 8,000 cavalry and 22,000 infantry, with 94 guns and 200 machine guns, and a number of aeroplanes and armoured cars. On Oct. 31, 1925, the Shah Ahmed Reza, who had been absent from the country for some time, was deposed by the National Assembly which handed over the government to the Prime Minister. On Dec. 13, 1925, the Constituent Assembly elected Reza Khan Pahlavi, Shah of Persia. The Shah took the oath on Dec. 25 and was publicly proclaimed, and was crowned on April 25, 1926.

The revenue is mainly derived from land tax, Crown lands, customs, duties and from monopolies of sugar, opium, matches, tea and tobacco. The oil royalties are kept apart from the general revenue. Part of the proceeds from the sugar and tea monopolies is earmarked for the construction of railways: in 1931-32, about £422,000 was so expended. British commercial interests in Persia exceed those of any other country, the trade between the British Empire (including India) and Persia amounting to nearly 45 per cent. of the total trade of the country (1930-31), inclusive of oil.

The leading imports into Persia are cotton fabrics, tea, sugar and motor vehicles; the principal exports are heavy oils, petrol, carpets, opium, gum, fruits, cotton and rice. All foreign trade was in Feb. 1931 declared to be a State monopoly, and restrictions on imports and on exchange transactions were imposed.

Revenue	£5,740,808
Foreign Debt (March, 1931)	£1,601,259
Imports	9,535,632
Exports	17,221,411
Imports from Brit. Empire	4,336,722
Exports to Brit. Empire	7,682,415

Defence.—Persia now possesses an army, well equipped on modern lines, of approximately 48,000 all ranks and a small fleet in the Persian Gulf.

Foreign Relations.—By the Anglo-Russian Convention of Aug. 1907, Great Britain and Russia mutually engaged to respect the integrity and independence of Persia while marking out certain regions in S.E. and N.W. Persia respectively in which each had, for geographical and economic reasons, special interests.

In March, 1921, Persia signed a treaty with the Russian Soviet Republic, which provides (*inter alia*) for mutual diplomatic and consular representation, restores to Persia Firuzeh and Ashurada, annuls all concessions previously granted to Russians in Persia, hands over the Russian Discount and Loan Bank to the Persian Government, cancels all Persian debts to Russia, denounces all previous Russo-Persian treaties, abolishes the "capitulations" as regards Russian subjects in Persia, and denounces all treaties made between Russia and third Powers regarding Persia. Further treaties were signed in 1927 and 1931.

In 1922 the Persian Government engaged a number of American advisers (under Dr. Millsaugh) for the supervision and direction of the country's finances. Considerable strides were made by the country under this new régime, a balanced budget and a programme for gradual development of the country's resources having been evolved. Dr. Millsaugh's contract came to an end. A State Bank was started in 1929 under German control; a certain number of Belgians are employed in the Ministry of Finance and in the Customs Administration.

In May, 1928, the capitulatory régime came to an end; at the same time a new Tariff Convention was signed, giving Persia Tariff autonomy.

CAPITAL. Tehran (pop. 210,000); other large towns are Tabriz (180,000), Isfahan (80,000), Meshed (80,000), Kermaun (50,000), Yazd (60,000), and Shiraz (60,000).

Do. Cardiff, Señor Don A. J. Bovey (*acting*).

Peru is a maritime Republic of South America, situated between 1° 31' 29" and 19° 13' S. latitude and between 69° and 81° 19' W.

The territory between 17° 47' S. and 19° 13' S. was

occupied by Chile, as the result of the Pacific War of 1879-1882. In 1929 the Province of Tacna was returned to Peru, Chile retaining the Province of Arica. The area of the Republic is estimated at 358,000 square miles (including 6,000 square miles for Tacna), and the population (1921) at 5,550,000. It is bounded on the north by Ecuador and Colombia, as the latter claims a territory in the Amazonian basin; on the east by Brazil and Bolivia, and on the south by Chile and Bolivia.

Peru was conquered in the early 16th century by Francisco Pizarro (born 1478, died 1541), who subjugated the Incas (a tribe of the Quichua Indians), who had invaded the country some 500 years earlier, and for nearly three centuries Peru remained under the Spanish rule. A revolutionary war of 1821-1824 established its independence, declared on July 28, 1821. The constitution rests upon the fundamental law of Oct. 18, 1856 (amended Nov. 25, 1860), and is that of a democratic Republic under a newly drawn constitution of 1919. The President is elected for five years by direct vote of the people and under an amendment to the Constitution (1927) may be re-elected indefinitely. The Constitution is again to be amended by the Constituent Assembly, for which elections are held (as also for President) in Oct. 1931.

The country is traversed throughout its length by the Andes, running parallel to the Pacific coast, the highest points being Huascarán (22,050 feet), Huandoy (21,100 feet), Arequipa (or Misti) volcano (20,013 feet), Huairan (20,000 feet), and Luma, Tocoza, and Saracasa, all over 19,000 feet. There are four distinct regions, the *costa*, west of the Andes, the *sierra* or western slopes of the Andes, the *yanas* or mountainous wastes below the region of perpetual snow, and the inward slopes (*montaña*) and boundless forests of the Amazonian basin. The coastal area, lying upon and near the Pacific, is not tropical, though close to the equator, being cooled by the Humboldt Current; its chief products are sugar, cotton, petroleum, wool, hides and skins, and it contains the chief towns and most of the white population. In the barren mountain section are to be found minerals in great richness and variety which await improved transport facilities before their production can be considerably increased. It is inhabited by Indians in a low state of civilization. Upon the eastern slope of the Andes are to be found very large tracts suitable for cultivation and stock raising, at present almost wholly unexplored owing to lack of communication, but efforts have been made in recent years to open up air routes. This part of the country should show most interesting developments in the future. The tropical lowlands lie east of the Andes towards the borders of Brazil, and consist mainly of unexplored or little known country inhabited by Indians in a savage state. There are here dense jungles, of which the principal commercial product is wild rubber. The mineral production in 1930 was as follows—Gold (kg. 2,766), silver (kg. 478,664), copper (48,205 tons), lead (19,744 tons), zinc (11,274 tons), vanadium (479 tons), antimony (59 tons), and petroleum (66,500,000 soles). The Lobos and other islands on the Pacific coast provide guano (95,000 tons in 1930).

The principal imports are foodstuffs, cotton, woollen, linen and silk goods, drugs, earthen and stone wares, machinery, explosives, metal

and manufactures thereof, stationery, paper manufactures, timber and wheat. The chief exports in 1930 were petroleum and derivatives (86,906,651 soles), minerals (72,016,947 soles), cotton (41,511,966 soles), and sugar (25,525,235 soles).

The total length of the railways open (1929) was 2,851 miles, of which 1,195 miles are under the control of the Peruvian Corporation. There is also steam navigation on Lake Titicaca and the River Desaguadero. The eastern rivers are also navigated to some extent by steam craft. Wireless telegraphy stations have been established in many places. There is considerable activity in air service. The Naval Air Force maintains services to Iquitos and other places in the interior. The coast district is served by a national company and by the Chile-U.S.A. route *via* Peru. National Air Mails are carried by Peruvian military machines.

Defence.—The Army is recruited by voluntary enlistment, supplemented by conscription, and numbers about 8,000 of all ranks, the Navy includes 2 cruisers built at Batavia, a destroyer bought from the French Government, and 4 submarines built in U.S.A. There is a military aerodrome at Chofillos (near Lima) and a sea-plane station at Ancon.

Language.—Spanish is the official language of the country, but native dialects (of which Quichua is the most important) are spoken by a considerable portion of the Indian population.

The Republic of Poland was proclaimed at Warsaw in November, 1918, and under the *Treaty of Versailles* (June 28, 1919) the assentors to the Covenant of the League of Nations, and the signatories of the Treaty of Peace, guarantee the independence of the Republic, which is reconstituted within the limits of the 18th-century "Polish Commonwealth." This State extended in the year 1772 over an area of about 286,000 sq. miles, and included a population of about 13,000,000. The political boundaries of the Republic are the Baltic Sea, Germany (East Prussia), and Lithuania, in the N.; Czechoslovakia in the S.; Rumania in the S.E.; Soviet Russia in the E.; and Germany in the W. The present area of the Republic may be estimated at 150,000 sq. miles, with a population estimated (Jan. 1, 1932), at 32,132,936 (of whom 22,208,076, or 69.1 per cent., are Poles, and 9,924,860, or 30.9 per cent., other nationalities). The predominant religion of the people is Roman Catholic, but all faiths enjoy equality, and there are a considerable number of Protestants and a very large number of Jews.

In 1919 hostilities broke out between Poland and Soviet Russia, and after initial successes the "Red" armies of Bolshevik Russia appeared (in August, 1920) likely to deal a crushing blow at Polish independence, the capital (Warsaw) being in peril of capture. A dramatic counter-attack by the Polish troops at the critical period reversed the nature of the campaign, and Poland was enabled to conclude peace on favourable terms.

Government.—A Republican form of government was adopted by the Constituent Assembly in 1919, the Chief of State exercising the executive authority through a Ministry responsible to the Legislature. The Legislature consists of a Diet (*Sejm*) elected by universal adult (male and female) suffrage, and of a Senate elected by adult (male and female) suffrage of those over 30 years of age. The Constitution voted on March 27, 1921, is very

Liberal. Since Marshal Pilsudski's *coup d'état* of May 22, 1926, amendments have been inserted in the Constitution conferring on the President of the Republic the power of legislation by decree at times when the Diet is not sitting, subject to subsequent ratification by the Diet.

Production.—Mining, cotton, metal work, agriculture, sugar, forestry and stock raising are the principal industries, the chief crops being rye, wheat, oats, barley, potatoes, and sugar-beet; the live stock includes cattle, horses, sheep, and pigs. There are valuable coal mines in Upper Silesia, Congress Poland, and Little Poland (Galicia), zinc, lead ore, mineral and potassium salts, and in Galicia (Boryslaw) are famous oil fields; the output of crude oil (1930) was 663,000 metric tons. The chief manufactures are textiles, those of minor importance being machinery and metal works, chemicals, and leather. The exports are principally coal, timber, spelter, agricultural produce and textiles, the imports being raw wool, cotton and jute, woollen and cotton goods, and machinery.

Defence.—The peace effective of the army is 17,000 officers and 250,000 other ranks. A small navy, for coastal defence, has been organized.

Education.—Education is compulsory and free, and there is considerable voluntary effort in addition to the work of the State. Secondary education is conducted on a high level, with good attendances, and there are universities at Cracow (founded 1364), Warsaw, Lwow, Poznan, Lublin, and Wilno; Polytechnics at Warsaw and Lwow, and an Academy of Science at Cracow.

Communications.—There are about 10,000 miles of railway and over 25,000 miles of telegraph line, with well-developed telephone systems in all the large centres. Over 4,000 miles of navigable waterways exist on the Vistula, Narew, Bug, Warta, and Pilica, of which about 1,200 are navigable by steamers. The free city of Danzig is within the Polish Customs area, free transit for Germany being guaranteed. A purely Polish port is also being constructed at Gdynia, north of Danzig, with a total water area of 470-495 acres, and an estimated maximum handling capacity of 6 to 7 million tons a year, when complete. During 1931 Gdynia handled 5,300,000 tons of goods. Direct railway communication is being built linking Gdynia with Upper Silesia and Czechoslovakia on the one hand, and with Rumania and the Black Sea on the other.

Portugal lies between 36° 58'—42° 9' 12" N. lat

and 6° 11' 48"—9° 29' 45" W. long., being 302 miles

in length from N. to S. and averaging about 117 in

breadth from E. to W. Continental Portugal con-

tains an area of 34,500 square miles, with a popu-

lation in 1930 of 6,190,000, and the Portuguese

Colonies a total area of 800,400 square miles, with

a population estimated at 10,384,381. The Azores

and Madeira are regarded, not as colonies, but

as a part of continental Portugal.

From the close of the eleventh century the

government of Portugal was a monarchy, and

for many centuries included the Vice-Royalty

of Brazil, which declared its independence in

1822. In 1910 an armed rising in Lisbon drove

the King and Royal family into exile, and the

National Assembly of Aug. 21, 1911, sanctioned a Republican form of government and adopted a constitution, with a President elected by Congress for 4 years, a Congress of two chambers, and an executive appointed by the President, but responsible to the Legislature. (Ex-King Manoel, of the House of Braganza, was born Nov. 15, 1809, and succeeded on the assassination of his father Feb. 1, 1908, died at Fulwell Park, Twickenham, Middlesex, July 2, 1921.)

The chief agricultural products of continental Portugal are wheat, barley, oats, maize, flax, hemp, and the vine in elevated tracts; in the lowlands, rice, olives, oranges, lemons, citrons, figs, vines, and almonds. There are extensive forests of oak, chestnut, sea-pine, and cork, the cultivation of the vine and the olive being among the chief branches of industry; the rich red wine known to us as "port" is shipped from Oporto. Its mineral products are important—copper, lead, tin, antimony, coal, manganese, iron, slate, and bay-salt, which last, from its hardness and purity, is in demand. Its manufactures consist of gloves, silk, woollen, linen, and cotton fabrics, metal and earthenware goods, tobacco, cigars, &c. The exports consist to the extent of 30 per cent of wine, which is the chief industrial product of the country; others are cork, cattle, tin, copper-ore, fruits, oil, sardines, and salt. The imports are manufactured goods—hardware, cotton and woollen stuffs, machinery, wheat, sugar, dried fish, coal, &c. The merchant marine (1931) numbered 43 steam vessels (above 1,000 tons), with a tonnage of 188,871. Railways 2,140 miles in extent were open for traffic in 1931, and there were 5,742 miles of telegraph line in 1930.

Defence.—Service in the militia is universal and compulsory. The peace effective is about 35,000. War strength, about 150,000. The Navy consists of a few small ships of old pattern. Air Fleet, 84 aeroplanes.

Education is free and nominally compulsory between the ages of 7 and 15, but is not strictly enforced, and about 54 per cent of the population above 7 years old are illiterate. Secondary education is conducted in State lycées. There are also military, naval and other special schools. There are Universities at Coimbra, Lisbon and Oporto.

	1930	33
Revenue (estimate)	£19,406,000	
Expenditure (estimate)	19,368,000

PORTUGUESE COLONIES.

CAPE VERDE ISLANDS, off the west coast of
 Africa, have an area of 1,524 square miles
 and a population of 148,300. Estimated revenue
 and expenditure 1930-31 £196,220; imports (1930)
 £622,310; exports, £41,620. shipping entries
 (1929) 1,593 vessels (702 British).

SAO THOME AND PRINCIPE ISLANDS, in the
 Gulf of Guinea (area 422 square miles, popula-
 tion 99,060. Estimated revenue (1930-31),
 £121,860; expenditure, £121,630; imports
 (1929), £450,060; exports, £739,890.

PORTUGUESE GUINEA, on the west coast of
 Africa, has an area of 14,000 square miles and
 a population of 806,973. Estimated revenue
 (1930-31), £249,150; expenditure, £248,970;
 imports (1931), £168,450; exports, £270,350.

ANGOLA (Angola and Kabinda) on the west
 coast of Africa has an area of 486,000 square
 miles and a population estimated at 3,000,000.
 Estimated revenue (1930-31), £1,821,620;
 expenditure, £1,808,090; imports (1931),
 £1,348,320; exports, £1,874,400.

A transcontinental railway from Benguela
 (Lobito Bay) in Angola, traversing the Katanga
 mineral district of the Congo and thence run-
 ning southwards through Rhodesia to Bulawayo
 and eastwards to Beira is being developed under
 British, Belgian and Portuguese control. This
 line makes through communication from Lobito
 Bay on the Atlantic to Beira on the Indian
 Ocean.

MOZAMBIQUE, in East Africa (Delagoa Bay,
 Gazaland, Inhambane, Mozambique, Nyasa,
 Quillimane, and Tete) has a total area of
 287,756 square miles, with a population of
 365,14,612. Estimated revenue and expenditure,
 1930-31, £3,319,820; imports (1931), £4,490,000;
 exports, £1,999,260.

PORTUGUESE INDIA has a total area of 1,470
 square miles, with a population of 548,222, and
 includes Goa, Daman, and Diu. Estimated
 revenue and expenditure (1930-31), £502,540;
 imports (1930), £1,272,100; exports, £297,300.

MACAO, in China, on the Canton River, has an
 area of 4 square miles and a population of 157,178.
 Estimated revenue (1930-31), £204,280; ex-
 penditure, £293,580; imports (1930), £1,904,760;
 exports, £1,019,900.

PORTUGUESE TIMOR (the northern portion of
 the island), in the Malay Archipelago, has an
 area of 7,450 square miles, with a population of
 394,518. Estimated revenue (1930-31) £78,480,
 expenditure, £78,280; imports (1929), £120,350,
 exports, £152,350.

Commercial Secretary, M. N. Holban.

Consul-General, (vacant).

Consul-Gen. (Hon.), M. G. N. Gologan, 5-7 St. Mary Axe, E.C. 3.

Rumania is a kingdom of South Eastern Europe formerly the classical *Dacia* and *Seythia Pontica*, territory roughly defined by the three great rivers Danube, Theiss, and Dniester, whose central point is the line of the Carpathians. The kingdom is divided into the 7 Provinces of The Banat, Transylvania, Bukovina, Bessarabia, Muntenia, Oltenia and Moldavia. Rumania has its origin in the union of the Danubian principalities of Wallachia and Moldavia (and the addition thereto of a strip of Southern Bessarabia) under the *Treaty of Paris* (April, 1856). The principalities remained separate entities under the suzerainty of the Turkish Empire until 1859, when Prince Alexandru Ion Cuza was elected Prince of both Principalities, still under the suzerainty of the Porte. Prince Cuza abdicated in 1866 and was succeeded by Prince Charles of Hohenzollern-Sigmaringen, in whose successors the crown is now vested. By the *Treaty of Berlin* (July 13, 1878) a new Principality (consisting of the two above mentioned) was recognised as an independent State, and part of the *Dobruja* (which had been occupied by the Rumanians) was incorporated in the new Principality. On March 27, 1882, the former Principality was recognised by the Great Powers as a Kingdom. Rumania is not a "Balkan" State. She took no part in the military operations of the Balkan League against Turkey in 1912-13. Her unexhausted military power secured for her a readjustment of her south-eastern (*Dobruja*) frontier in 1913. In the War of 1914-1918, Rumania fought on the side of the Allies from Aug. 27, 1916, and after many vicissitudes (due mainly to the sudden collapse of the Russian Armies in 1917), she emerged in triumph at the cessation of hostilities. Her territories were greatly increased as a result of the War, and the *ante bellum* area of the Kingdom (74,461 sq. miles) may now be estimated at 123,000 sq. miles, and the 1925 population of 7,897,311 has been increased to 18,057,074 (1930 census). The dominating religion is that of the Greek (Orthodox) Church.

GOVERNMENT—The government is that of a Constitutional Monarchy, the legislative assembly consisting of a Senate (56 members) elected for 4 years, and of a Chamber of Deputies (361 members) elected for 4 years by universal suffrage, provision being made for the proportional representation of minority parties. The executive is entrusted to a council of ministers.

PRODUCTION—The soil of Wallachia, Bessarabia, and Moldavia is among the richest in Europe. The agricultural produce consists of wheat, maize, millet, oats, barley, rye, beans and peas. The wheat crop for 1931 was 3,682,792 metric tons; rye 354,648, maize 6,063,333, barley 1,414,395, and oats 670,237 metric tons. Vines and fruits are abundant. The fertile plain of Transylvania yields large crops of maize, wheat, rye, oats, flax, and hemp, and the rich lands of Bessarabia produce wheat, maize, barley, flax, tobacco, water melons, fruit, and grapes. Agriculture and sheep and cattle raising are the

principal industries of the kingdom, but the climate of this part of South-Eastern Europe is of the Continental character, with intense winter cold and summer heat, and fierce summer droughts sometimes defeat these principal industries. The forests of the mountainous regions are extensive (17,851,401 acres), and the timber industry is important. The country is rich in minerals, and produces petroleum, salt, coal, lignite, iron, gold, and mica; the workers in the oilfields are the largest single unit of workers in any one industry; the production of crude oil was 1,885,225 metric tons in 1913, 3,669,354 metric tons in 1927, 4,300,000 metric tons in 1928, 4,827,278 metric tons in 1929, 5,792,311 in 1930, and 6,578,803 in 1931. Manufactures are in their infancy, and the imports are chiefly manufactured goods, textiles, machinery and metals; the exports consist principally of wheat, barley, maize, oats, petroleum, timber, cattle, salt and hides. All large estates have been expropriated and divided among the peasants.

DEFENCE—Service in the Army is universal and compulsory. In the War of 1914-1918 over 900,000 all ranks passed into the Arms of Rumania, and of this number over 25 per cent. were killed or returned as "missing." At the resurgence of Nov. 1918, an army of 400,000 was again in the field. This force was the deciding factor in the Rumano-Hungarian question, and it drove the Bolshevik dictator (Bela Kun) into exile from Buda Pest. There is a small Navy on the Black Sea and on the Danube (30 vessels).

EDUCATION is free and nominally compulsory, there being 19,374 schools with 1,612,763 in attendance. Secondary schools are well attended. There are also special schools and Universities at Bucharest, Jassy, Cluj, and Cernauti. A Government High School of Commerce was opened in 1913.

COMMUNICATIONS—In 1930 there were 7,364 miles of railway open for traffic in the whole kingdom, railway communication requires great development in order to cope with the problem of carrying the cereal crops to the shipping ports. There are 23,000 telegraph and telephone offices. The mercantile marine consists of about 120 steamers and 600 sailing vessels. The Black Sea ports are Sulina and Constantza; the latter is linked with the interior by a railway.

SALVADOR.

(República de El Salvador.)

President (1931-1935), General Maximiliano Hernández Martínez, assumed office Dec. 3, 1931.
Vice-President (vacant)
Foreign Affairs, Education, and Justice, Señor Dr. Don Miguel Angel Araujo
Interior, Development, Agriculture, Labour, Health, and Charity, General Salvador Castaneda Castro
Finance, Public Credit, Industry and Commerce, Señor Dr. Don Miguel Tomas Molina.
War, Marine and Aviation, Colonel Joaquin Valdes.

Consul-General, Señor Don Samuel Jorge Dawson, 7 Union Court, Old Broad Street, E.C. 2

The Republic of Salvador extends along the Pacific coast of Central America for 170 miles, with a general breadth of 43 miles, and contains an estimated area of 13,176 square miles, with a population estimated in 1931 at 1,437,157. It is divided into 14 departments. In 1931 there were 67,445 births and 33,226 deaths.

Salvador was conquered in 1526 by Pedro de Alvarado, and formed part of the Spanish viceroyalty of Guatemala until 1821. In 1840 the Republic broke away from the federation of Central American States. The government is based upon a written constitution and is composed of (a) the Executive power, which is exercised by the President; (b) the Legislative power, which is in the hands of the National Assembly, and (c) the Judicial power, which rests ultimately with the Supreme Court. Elections take place once every four years, and the President is ineligible for a successive term.

The surface of the country is very mountainous, many of the peaks being volcanoes. The highest peak is the Santa Ana volcano (8,300 feet). Much of the interior has an average altitude of 2,000 feet. The lowlands along the coast are generally hot and unhealthy, but towards the interior the altitude tempers the severity of the heat and much has been done in recent years to improve sanitary conditions and services. There is a wet season (winter) from May to October, and a dry season (summer) from November to April. Earthquakes have been frequent in the history of Salvador, the

most recent being that of 1919, when great damage was done to the capital and other towns.

The principal river is the Rio Lempa. There is a large volcanic lake (Ilopango) a few miles to the east of the capital, while further away and to the west lies the smaller but very picturesque lake of Coatepeque, which appears to have been formed in a vast crater flanked by the present Santa Ana volcano. The eastern spur of this volcano forms the peak of Izalco, which is in an almost constant state of volcanic activity, and (on account of its visibility from the ocean) is known as "The Lighthouse of the Pacific."

The chief industry is the cultivation of coffee, which is grown under shade-trees principally on the slopes of the volcanoes, cane sugar is also produced, as well as maize, indigo, rice, balsam, &c. Cotton-growing on a large scale was commenced in 1924, but on account of the ravages wrought by insects it was practically abandoned after two seasons. In the lower altitudes towards the east henequen is produced. The principal exports are coffee (sometimes over 90 per cent. of total value), sugar, indigo, balsam, henequen, hides and skins. The chief imports are cotton textiles, flour, iron and steel goods, lard, motor cars, manures, jute sacks, chemical products, cement, petrol, thread. A British railway nearly 100 miles in length connects Acajutla with the capital and with the important coffee centre of Santa Ana. A line from the port of La Unión (on the Gulf of Fonseca) to the capital was opened in 1922. Two new lines were opened in 1927, one from the capital to Santa Lucia, a suburb of Santa Ana, tapping the upper Lempa Valley; the other from the coffee centre of Ahuachapán to Santa Lucia. A new line from Santa Lucia to Zacapa (in Guatemala) was opened to traffic in 1930 and affords continuous railway communication between San Salvador and Guatemala City and Barrios. During 1924-26 the re-draming and re-paving of most of the capital were completed, and plans have been made for the macadamizing or paving of several hundred miles of rural roads, many of which are now impassable during the rainy season. There is a good motor road between the port of La Libertad and the capital, while motor transportation is usually possible in the dry season between the capital and Guatemala City, over the International road opened in 1923. The Pan-American Airways maintain regular services connecting San Salvador with the U.S. *via* Guatemala-Mexico-Brownsville, and *via* Havana-Miami, and connecting with Panama *via* Honduras, Nicaragua, Costa Rica.

There are 202 post-offices and 257 telegraph offices. There is a wireless (receiving and transmitting) station at the capital, and during 1926 a broadcasting station was inaugurated.

The language of the country is Spanish.

Salvador is 5,700 miles from London; routes (a) New York, New Orleans, Puerto Barrios (Guatemala) and thence by rail, (b) New York and direct steamer to La Libertad; (c) direct steamer to Panama Canal and thence by steamer to La Libertad. The first route is the quickest

SAN MARINO.

Regents, Two "Capitani Reggenti"

Consul-General for San Marino in Great Britain, Grand-Off. Melvill A. Jamieson, 42 Pall Mall, S.W. 1.

Vice-Consul, Comm. Giovanni Sovrani

A small Republic in the hills near Rimini, on the Adriatic, founded, it is stated, by a pious mason of Dalmatia in the 4th century, and governed by a Council of 60, of whom two are elected as Regents for six months (1 April and 1 October), being thereafter ineligible for office for three years. The area is 38 square miles, the population 12,952. There is an army of about 1,000. The city of San Marino (pop. 2,000) occupies the slope of Mount Titano, and has an impregnable castle, where King Berengar of Lombardy took refuge in 950 A.D., a fine church and Government palace, and a theatre. The principal industries are wine, cereals, cheese, oil and cattle raising, in addition to the utilization and export of gravel from Mount Titano and production of white and hydraulic lime at Serravalle. A Treaty of Extradition was concluded between the Governments of Great Britain and the Republic of San Marino on Oct. 16, 1899. An electric railway runs from Rimini (25 minutes)

FLAG: Two horizontal bands, white, blue (with coat of arms of the Republic in centre).

British Consul-General, E. R. Seccombe (Leghorn, Italy).

SARRE TERRITORY.

Under the Treaty of Versailles Germany renounced the government of the Sarre Basin in favour of the League of Nations, the government being entrusted to a commission of 5 members nominated for one year by the League. At the expiration of 15 years from Jan. 10, 1920, the population will be called upon to decide by a plebiscite the government under which they wish to be placed. The total area is about 743 square miles, with a population of about 774,546. The chief towns are Sarrebruck (125,000), Neunkirchen (41,031) and Saint Ingbert (20,817)

SAUDI ARABIA. See Arabia.

SIAM.

(Muang Tai.)

King, Prajadhipok, born Nov. 8, 1893; succeeded Nov. 26, 1925.

Foreign Minister, H. E. Phya Silvisar Vacha.

Envoy Extraordinary and Minister Plenipotentiary in London, H. S. H. Prince Damras Danrong Derakula, 23 Ashburn Place, S.W. 7

The Kingdom of Siam, or Muang Tai (area about 195,000 square miles; population, 1909, 11,506,307) is a buffer State between British Burma and French Indo-China, and its integrity is guaranteed by the British and French Governments by the Anglo-French Agreement of April, 1904. Until the middle of 1932 the King was an absolute monarch, but in June 1932, a revolution broke out in Bangkok, various leading Princes were seized as hostages, and an invitation was sent to the King to rule in future as a constitutional monarch. In response to the invitation a temporary Constitution Act was promulgated (June 27) under which the King remains the Head of the State, with greatly reduced powers, and there was established a People's Senate of 70 members, a deliberative and legislative body, while the executive power is in the hands of a Committee of 15 drawn from the People's Party. A permanent constitution is in course of preparation. A number of English, French, Italians, Danes, and Americans are employed in the various State departments. There is an army of nearly 50,000 men, and a few small gunboats, compulsory military service has been introduced. The Kingdom contains many Chinese (largely engaged in trade and industry), besides Sians, Laos, Malays, Burmese, and Cambodians, and over 1,800 Europeans. The principal religion is Buddhism. There are 364 Government schools and 4,124 schools of all kinds, attended by 448,380 children. The Chulalongkorn University is organised with faculties of medicine, political science, engineering, and literature and science.

The upper part of Siam is mountainous, the lower flat. Bangkok is the only much-frequented port. Eighty-five per cent of Siamese sea-borne trade, which centres at Bangkok, is with the British Empire, and is largely in the hands of British firms or of Chinese trading from Singapore and Hong Kong. Norwegian shipping holds the lead in tonnage, followed closely by British. The chief products of Siam are rice, teak, and tin (from Lower Siam). The area under rice is being much enlarged by irrigation and by railway extensions, bringing the provinces into closer touch with the capital. There is a large number of rice mills, mostly in or near Bangkok. The teak industry in the great forests of N. Siam is mainly in English hands. In 1928-29 rice constituted 69, tin 7 and teak 4.4 per cent. of the exports from the port of Bangkok; while hides and marine products are also exported in considerable quantities. Among imports are tea, cane, cotton goods and yarn, silk goods, provisions, gunny bags, kerosene, sugar, opium, metals and metal wares, machinery, &c. The general tariff rate is 20 per cent *ad valorem*, but special rates (ranging from 5 to 60 per cent *ad valorem*) are imposed on specified articles. Burma imports teak and cattle overland from Siam, and exports thither cotton and silk goods, &c. Except tin,

wolfram, rubies and sapphires, there are no important mineral products as yet. About 1,880 miles of railroads (mostly State-owned) are now open for traffic. Railways from Bangkok run to Vaindir (357 miles N.E.), Chiengmai (465 miles N. of Bangkok), Aranya Prades (199 miles E.), the southern line to Taung, on the west coast of the Malay Peninsula, was open to traffic in October, 1926, and in July, 1928, was completed to the Kelah border, where junction with the Federated Malay States Railway system was effected. The E. coast line to Sungai Golok (Kelantan) has also been opened to traffic. There is through railway connexion between Bangkok and Penang and Singapore. Good roads are few. There are 4,000 miles of telegraph lines.

Naval Attaché, Capt. Don Adolfo II. de Solas.
Agricultural do., Señor Don José Da Casa.

Commercial Attaché, Señor Don Ramon de Oyarzun.

Consul-General, Ilmo. Señor Don Enrique Gaspar, 20, Gordon Square, W.C. 1.
Consul, Señor Don Eduardo Daula.

A Republic situate in the south-west of Europe, between 36°-43° 45' N. lat. and 4° 25' E.—9° 20' W. long., bounded on the south and east by the Mediterranean, on the west by the Atlantic and Portugal, and on the north by the Bay of Biscay and France, from which it is separated by the Pyrenees; and occupying the larger portion of the great Iberian Peninsula. Its coast-line extends 1,327 miles—722 formed by the Mediterranean and 605 by the Atlantic—and it comprises a total area of 196,700 English square miles, and an estimated population, in Dec. 1931, of 22,940,122—120 to the square mile. The interior of the peninsula consists of an elevated tableland surrounded and traversed by mountain ranges—the Pyrenees, the Cantabrian Mountains, the Sierra Guadarrama, S. Morena, S. Nevada, Montes de Toledo, &c. The principal rivers are the Douro, the Tagus, the Guadiana, the Guadalquivir, the Ebro, and the Minho.

Government—After the union of Aragon and Castile in the last quarter of the 15th century, Spain was ruled by sovereigns of the Aragon, Habsburg and Bourbon lines (with the intervention of a Republic 1873-75), Alfonso XIII. succeeding at birth in 1886. (In April 14, 1931, following the results of the Municipal Elections, which showed anti-monarchical feeling to be extremely high in all the chief towns of Spain, King Alfonso XIII. left the country, and the Queen and other members of the Royal Family on the following day. A Republic was immediately proclaimed and a Provisional Government, drawn from the various Republican and Socialist parties, was formed. Elections for a Constituent Assembly were held on June 28; the Assembly met on July 14 and passed a vote of confidence in the Provisional Government. In December a Presidential Election was held.

Production and Trade—Spain is rich in iron, copper, and lead; its mineral resources are only partially exploited, and principally by foreign capital under foreign direction. In 1930 the coal production was 7,547,094 tons, of which 6,546,824 were pit coal, 380,204 lignite, and 620,066 anthracite. The country is generally fertile, and well adapted to agriculture and the cultivation of heat-loving fruits—as olives, oranges, lemons, almonds, pomegranates, and dates. The agricultural products comprise wheat, barley, maize, oats, rice, with hemp and flax of the best quality. The vine is cultivated in every province; in the south-west, Jerez, the well-known sherry and tent wines are made; in the south-east, the Malaga and Alicante. The principal articles imported are raw cotton, spirits, fish, wheat and flour, sugar, coal, timber, woollen manufactures, machinery and railway materials, hides, &c. The principal exports are wine, copper and copper ores, lead, iron ores, olive oil, raisins, oranges, cork, esparto grass, wool, salt, quicksilver, grapes, &c. Trade was for many years mostly confined to France and Great Britain, but Germany had, before the War, become a serious competitor, while the United States and Belgium share an increasing proportion of Spanish trade. Home manufacture is protected by high customs duties.

* At 7 cents 20 Rs = £2.

In 1929 there were 10,197 miles of railway open and 70,000 miles of telegraph line. The sea-going mercantile marine over 50 tons, on Jan. 1, 1931, consisted of 1,276 steamers (1,189,655 tons) and 394 sailing vessels (50,277 tons). In 1929, 22,094 vessels of 33,627,024 tons entered and 19,534 vessels of 22,752,245 tons cleared at Spanish ports.

Defence.—In 1931 the Army was reduced from 26 Divisions to 8 Infantry Divisions and 1 Cavalry Division, having an authorized Peace establishment of 4,942 officers and 98,114 men for the Spanish Peninsular Army and of 1,876 officers and 45,849 men for the Army in Morocco.

The Navy consists of 3 (15,700-ton) battleships and 3 modern cruisers, with 1 old battleship and 4 old cruisers; there are also 7 torpedo-boat destroyers, 20 torpedo-boats, 7 submarines, and 22 gunboats.

Education. *Primary*, is nominally compulsory and mainly free, and is State-aided, the public schools being maintained by local taxation. Many private schools are under clerical control, and supervision is lacking. *Secondary* High Schools are in each province, but the curriculum is defective. *Universities* at Barcelona, Granada, Madrid, Murcia, Oviedo, Salamanca, Santiago, Saragossa, Seville, Valencia, and Valladolid.

BRITISH CHAMBER OF COMMERCE FOR SPAIN,

8 Rámba de los Estudios, *Barcelona* (Branch,

9 Calle Marqués de Cubas, *Madrid*)

Madrid, 2,150 miles, transit, 45 to 50 hours.

The Balearic Isles, Ceuta, Melilla and the Canary Islands, are integral parts of Spanish territory.

The BALEARIC ISLES are an archipelago of 15 islands in the Mediterranean, the largest

being Majorca, Minorca, Iviza, and Formentara; the total area is 1,935 square miles, with a population (1923) of 344,466. The archipelago forms a province of Spain, the capital being Palma in Majorca.

CEUTA, which forms part of the Province of Cadiz, is a fortified post on the Moroccan coast, opposite Gibraltar. The total area is 5 miles, with a population of 35,219.

MELILLA is a town on a rocky promontory of the Riff coast, connected with the mainland by a narrow isthmus. Melilla has been in Spanish possession since 1492 and is an integral part of Spanish territory. The population is 50,170.

THE CANARY ISLANDS are an archipelago in the Atlantic, off the African coast, consisting of 7 islands and 6 uninhabited islets. The total area is 2,807 square miles, with a population of 473,497. The Canary Islands form a Province of Spain, the capital being Santa Cruz in the island of Tenerife.

Spanish Colonies.

The Spanish Colonies consist of certain settlements in, and islands round the coast of, Africa, with a total area of close on 82,400 square miles, and a population exceeding 275,000.

FERNANDO PO (*Fernando Pón*) lies in the Bight of Biafra in 3° 12' N. lat. and 8° 48' E. long., about 20 miles distant from the west coast of Africa, and is a mountainous island (Pico de Santa Isabel, 10,800 feet), with forests of oil palm, ebony, mahogany, and oak, and sugarcane, cotton, and indigo. Cocoa, coffee, sugar, tobacco, vanilla, and kola nut are cultivated, and large quantities of cocoa and other products are exported. With its dependencies it has an area of about 800 square miles, and a population estimated at 24,000. The capital is Basile, and the largest town Port Clarence (1,500 inhabitants). Dependencies are:—

Annoñon Island (Anno Bom), in the Gulf of Guinea, in 1° 24' S. lat. and 5° 35' E. long.; population 1,391.

Corisco Islands, consisting of Corisco, Elobey Grando, and Elobey Chico, lie in Corisco Bay, and export ebony, logwood, and other forest produce. Total population 96,072.

RIO DE ORO AND ADRAIR (Capital, Villa Cisneros) is a possession on the north-west coast of Africa, between Cape Bogador and Cape Blanco, or approximately between 21° 20'–26° N. lat., and extending eastwards to about 13° W. long. The territory is part of the waterless Sahara, with a sparse population of wandering Muhammadan Arabs; population 253.

Rio Muna (or Spanish Guinea) is a coastal settlement of West Africa between Cameroon and French Congo (1° N.—2° 10' N. lat.), extending about 125 miles inland. The inhabitants are Bantu tribes, and the principal settlements are at the mouths of the Muni, Benito, and Campa rivers, and at Bata on the coast.

SPANISH MOROCCO.—Spain exercises a protectorate over a part of Northern Morocco (see "Morocco"), and on the Moroccan seaboard are certain Spanish *presidios*, formerly used as convict settlements.

Alhucemas is a settlement on the bay of that name, and includes six islands; population 322.

Peñon de la Gomera (or Peñon de Velez) is a fortified rocky islet about 40 miles west of Alhucemas Bay; population 398.

Spanish Southern Morocco.—Ifni, on the Atlantic coast of Morocco, about 100 miles south of Agadir, affords access to the interior of south-west Morocco, but has no great trade at present.

The Chafarinas (or Zafarinas) are a group of three islands near the Algerian frontier, about 2 miles north of Cape del Agua, population 312.

THE SUEZ CANAL.

The Suez Canal—The *Compagnie Universelle du Canal Maritime de Suez* (1 Rue d'Astorg, Paris VIII) is an Egyptian company, authorised in 1856, and confirmed in 1866, with a capital of 200,000,000 francs in 400,000 shares of 500 francs each. The British Government acquired from the Khedive in 1875 a total of 176,602 shares (cost £4,000,000, value March 31, 1921, £52,902,396). Since 1924 each 500 franc share has been divided into two 250 franc shares.

The Suez Canal was opened in 1869. The total length of the canal is 102 miles, with a minimum width of 45 metres (147 ft. 8 in.), the maximum draught of water allowed for vessels using the canal is 20.06 metres (33 feet). The average time for the transit through the canal is 13 hours 26 minutes. By a convention, signed on Oct. 29, 1888, the canal was exempted from blockade, and vessels of all nations, whether armed or not, are to be allowed to pass through it in peace or war. The management of the canal is entrusted to a council of 32 administrators, of whom 10 are British (three representing H. M. Government and seven the shipowning interest).

British Commercial Directors, T. Harrison Hughes (*Vice-President of the Company*); Sir Alan G. Anderson, K.B.E.; Sir John Cadman, G.C.M.G.; Sir August Geyser, Bt.; Rt. Hon. Sir R. S. Hone, G.B.E., K.C., M.P.; Sir E. Wyldore-Smith, Sir Thomas Royden, Bt., C.H.

Representing H.B.M. Govt., Sir Ian Malcolm, K.C.M.G.; Sir J. T. Davies, K.C.B., C.V.O.; The Earl of Cromer, G.C.B., G.C.I.E., G.C.V.O.

The following table shows the number and tonnage of vessels which have passed through the Suez Canal since 1920, with the percentage of British vessels:—

Year	No of Vessels.	Net Tons	British Tonnage.
			%
1922	4,345	20,743,245	64.5
1923	4,621	22,730,162	62.8
1924	5,122	25,109,882	59.7
1925	5,337	26,761,935	59.9
1926	4,980	26,060,377	57.4
1927	5,545	28,662,028	57.1
1928	6,084	31,905,902	56.8
1929	6,774	33,406,014	57.1
1930	5,761	31,668,799	55.58
1931	5,366	30,027,566	55.36

The tonnage of the merchandise carried was 25,776,000 tons in 1923; 27,047,000 tons in 1920; and 25,332,000 tons in 1931. Details of the

nationality of the vessels passing through the Canal in 1931 are appended :—

	No of Vessels	Net Tons	Per cent (Tonnage)
British	2,976	16,624,352	55 36
German	508	3,314,750	10 04
Netherlands ...	444	2,848,368	9 49
French	354	2,084,035	6 54
Italian	286	1,424,095	4 74
Japanese	196	1,153,133	3 84
Norwegian	151	745,740	2 48
United States ..	102	624,535	2 08

Russian	62	175,494	0 59
Danzig	11	87,336	0 29
Belgian	23	83,056	0 28
Greek	25	52,609	0 18
Yugoslavian	9	40,240	0 14
Finnish	2	9,988	0 03
Egyptian	4	4,074	0 01
Portuguese	1	3,677	0 01
Chinese	1	2,128	0 007
Lettonian	1	561	0 002
Totals...	5,366	30,027,966	100 00

The transit receipts in 1870 were 5,718,756 fr (gold), and in 1931, 931,305,507 fr. (paper). The rate of transit dues as from Nov 15, 1931, is 6 fr. (gold) per ton, and 3 fr. (gold) for vessels in ballast.

The net dividends for the year 1931 amounted on the ordinary 250 fr shares to 456 fr. 64 c. (507 fr 78 c *au nominatif*), and on the Actions de Jouissance to 417 fr. 47 c. (456 fr. 06 c *au nominatif*).

The 5,366 vessels included in the total for 1931 are grouped under the following categories :—

	No	Net Tonnage
Merchant vessels (laden)	2,776	14,289,740
Mail steamers	1,706	11,835,886
Warships and transports	255	842,840
Government chartered vessels	25	174,314
Merchant vessels in ballast ...	614	2,905,186
	5,366	30,027,966

SWEDEN.

(Sverige)

King of Sweden, of the Goths and the Wends, Gustaf V., born June 16, 1858; suc. December 8, 1907; mar. Sept 20, 1881, Victoria, dau. of Grand Duke of Baden (born August 7, 1862, died April 4, 1930) and has issue two sons.

Heir Apparent, Gustaf Adolf, Duke of Skåne, Crown Prince, born Nov 11, 1882, married (1) June 15, 1905, H R H the late Princess Margaret of Connaught (died May 1, 1920). (2) Nov 3, 1923, Lady Louise Mountbatten, Princess of Battenberg, born July 13, 1889.

Chancellor, O. Gad.

Swedish Church, Harcourt Street, Marylebone Road, W. 1.

Sweden comprises the eastern half of the Scandinavian peninsula, and comprises the capital and 24 governments, "Län," with an area of 173,353 square miles, and a population, Dec. 31, 1931, of 6,162,446, nearly all Protestant. This area includes the great lakes of Vänern, Vättern, Mälaren, and Hjälmaren. Nearly 40 per cent. of the population are devoted to agriculture, about 295,000 being owners and 80,000 tenants of the land they cultivate. The country may be divided into three separate districts, the northern, forest, central, mining and agricultural; the southern, agricultural. The climate in the south is favourable for producing grain. The principal articles of cultivation are oats, wheat, rye, barley, potatoes, roots and grasses. The forests are very extensive, covering over one-half of the surface of the country, and consisting chiefly of pine, birch, fir, these are of great importance, supplying timber, pitch, and tar, and the chief fuel of the country, in addition to sulphite and mechanical wood pulp for the paper-making industry. The mineral products are extremely rich: iron of excellent quality, lead, zinc, sulphur, manganese, arsenic, granite, porphyry, and marble. There is a railroad opening up the rich iron-ore districts of Lapland, and mineral trains run from Gellivare and Kiruna to Lulea on the Gulf of Bothnia and to Narvik on the Atlantic, coal is being worked in Scania (Skåne). The chief imports are coffee, tobacco, and other ordinary colonial produce, corn, coal, machinery, motor cars, mineral oils, cloth, cotton, wool, manures, skins, iron, copper, and yarn. The chief articles of export are timber, wood pulp, paper, machinery, iron ore, matches, butter, pork, and stone. In 1931 the exports of wood pulp and paper were 2,308,827 tons.

Railroads 10,420 miles in length (of which 4,196 are the property of the State) were open on Jan. 1, 1932, and 39,988 miles of telegraph (inclusive of 19,608 railroad telegraph), 133 control stations, and 1,950 railroad and 1,690 other telegraph stations. There were at the same date 669,333 miles of telephone.

Defence—Service in the Army is universal and compulsory, about 24,500 being trained annually; war strength about 400,000. The Navy consists of 63 fighting vessels (350 guns),

22 being ironclads, with submarines, and some training ships, &c.

Education.—(i.) *Primary*: Compulsory and free. Illiteracy rare. Maintained by local taxation, with State grants. Attendance good. (ii.) *Secondary*: Well-developed, schools numerous and efficient. (iii.) *Special schools* make a feature of technics, commerce, and navigation. (iv.) *Universities*: Uppsala, Lund, and private faculties in Stockholm and Gothenburg.

The Helvetia of the Romans, a Federal

Republic of Central Europe, situated between

45° 50'—47° 48' N. lat. and 5° 58'—10° 30' E. long.

It is composed of 26 Cantons, of very dissimilar

size, united under a Constitution dated 29 May,

1874, and comprises a total area of 15,950 square

miles, with a population of 4,066,400 in 1930,

who are divided between Roman Catholics, 41

per cent., and Protestants, 57 per cent., Jews

numbering 21,000, and others 43,000. The popula-

tion is formed by three nationalities, distinct by

their language, as German 71 per cent., French

21 per cent., Italian 6 per cent., and Romansch

(Grisons), 1½ per cent. It is the most moni-

tainous country in Europe, having the Alps,

covered with perennial snow and glaciers, rising

from 5,000 to 15,213 feet in height, not only along

its southern and eastern frontiers, but through-

out the chief part of its interior; and the Jura

mountains in the north-west. Agriculture is

followed chiefly in the valleys, where wheat,

oats, maize, barley, flax, hemp, and tobacco are

produced, and nearly all English fruits and

vegetables are grown. The forests cover about

one-fifth of the whole surface. The chief

industries comprise the manufacture of silks,

artificial silks and silk ribbons, wool, cotton

and cotton ribbons, linen, embroideries, strawplait,

machines, paper, chemicals, chocolate, condensed

milk, dyestuffs, and tobacco; while the metallur-

gical, electrical and pharmaceutical industries

are also extensive; clocks and watches have long

been the staple products of Geneva and

Nenchâtel. In 1931 there were 3,650 miles of

railway in operation, 270 miles of telegraph

* The President is elected in December, and remains

in office from 1 Jan.—31 Dec., he is generally succeeded

by the Vice-President.

line (14,300 miles of circuit), 21,050 miles of telephone line (1,045,000 miles of circuit), and 4,004 post-offices.

The legislative power is vested in a Parliament, consisting of two Chambers, a National Council of 127 members, and a Council of States of 44 members; both Chambers united are called the Federal Assembly, and the members of the National Council are elected for four years, an election taking place in October. The executive power is in the hands of a Federal Council of 7 members, elected by the Federal Assembly, presided over by the President of the Confederation. The President has a salary of 35,000 francs, the Vice-President and other members of the Federal Council 32,000 francs each. The members of the Federal Council are elected for four years; each year the Federal Assembly elects from this council the President and the Vice-President; they are elected for one year, the five other members for four years. Not more than one of the same canton may be elected member of the Federal Council.

Defence. *Militia* Active Army, 12 yrs; initial trng., 65-90 days. Subsequently 11 days per ann., then Landwehr, 8 yrs, 1 trng., 11 dys for dismd. branches only, then (Landsturm to age 48). *War Strength*, *Militia*, 140,600, Landwehr, 65,000, Landsturm, 57,000.

Education.—Control by cantonal and communal authorities. No central organ. Illiteracy rare in Protestant cantons. (i) *Primary* Free and nominally compulsory, but attendance is not strictly enforced in the essentially Roman Catholic cantons. School age varies. (ii) *Secondary*: Age 12-15 for boys. Schools numerous and well-attended, and there are many private institutions. (iii) *Special schools* make a feature of commercial and technical instruction (iv) *Universities* Bâle, Berno, Fribourg, Geneva, Lausanne, Zurich, and Neuchâtel.

SYRIA AND LEBANON.

Syria—British forces, together with small French and Arab detachments, drove the Turks out of Syria and Lebanon in 1918, and occupied those districts and the district of Cilicia. By decision of the Supreme Council of the Allies the districts in question were entrusted to France, to be administered under a mandate (Cilicia was restored to Turkey by the French in 1922).

The Emir Feisal (son of the ex-King of the Hedjaz and, since 1922, King of Iraq) had from the outset assumed the administration of the districts of Aleppo, Hama and Homs, which had been assigned as independent Arab districts under an earlier agreement of May, 1916, between France and Great Britain (the *Sykes-Picot Agreement*), and it was intended to allow the Emir to remain under French guidance, but on March 8, 1920, the "Syrian Congress" at Damascus declared Syria independent, and the Emir Feisal was crowned King of Syria. The action of the Syrian Congress did not receive the sanction of the Allied Powers, and General Gouraud occupied Damascus, Aleppo, Hama and Homs. The Emir Feisal left the country, and afterwards became King of Iraq (q.v.). The French Mandatory Zone was first divided into the four autonomous states of Great Lebanon, Damascus, Aleppo and the Alaouites (the region round Latakia), each having a French adviser responsible to the High Commissioner at Beyrout. The latter three States were later grouped together to form the *Syrian Federation*, with a nominated Council. The Federation has now been abolished. *Damascus* and *Aleppo* have been amalgamated into a single State, and the State of the *Alaouites* (now known as the *Government of Latakia*) is again independent. The *Jebel Druze* forms a small independent State. The form of government differs in each of the actual States, but the guiding principle in each is French control.

Syria is a geographical term for part of the former Turkish territories in Asia Minor, its political neighbours being Turkey, Iraq and Palestine on the north, east and south, with a western coastline washed by the Mediterranean Sea. The estimated area is about 60,000 sq. miles, with a population of about 3,000,000.

of whom the greater number are Orthodox Muhammadans, with a proportion of Shilites and Druses. The products of Syria are wheat, tobacco, fruit, wine, silk, liquorice, copper and brass goods; there is little cultivation without irrigation, the inland districts being cut off from the moisture-laden winds by a mountain barrier running parallel with the coast. The mineral wealth is believed to be unimportant, but there is a certain amount of bitumen. The principal Syrian towns are Damascus (est. pop. 300,000), Aleppo (250,000), Homs (70,000), and Hama (60,000). Damascus contains the Mosque of the Ommayyades and the tomb of Saladin, and in the south-western quarter is "The Gate of God," through which the pilgrimage to Mecca used to pass, while the "street called Straight" (Acts ix, 11) runs E. to W. through the city. Damascus is an important commercial centre, and among its industries are metal work and mother-of-pearl inlay, and also native-made silk and cotton stuffs. At *Baalbek* (Heliopolis), on the western slopes of the Anti-Lebanon range (35 miles N.N.W. of Damascus), are ruins of 1st to 3rd century Roman temples (the Circular Temple, the Great Temple and the Temple of Bacchus), and in the vicinity of the ruins is the largest cut stone in the world (60 x 17 x 14 feet), weighing 1,500 tons. The railway system consists of a line from Beyrout to Damascus (narrow gauge), with a connexion at Rayak for Homs, Hama and Aleppo (standard gauge). The line from Tripoli to Aleppo, *via* Hama, was reopened in 1921. A narrow-gauge tramway runs from Beirut to Mameltein along the coast. From Damascus there is railway communication with Palestine and with Transjordan, and the Syrian railways link up with the Baghdad railway at Aleppo. Road communications between Beyrout and Baghdad, *via* Damascus, have been developed by the opening up of the desert motor routes. Baghdad is now within 24 hours of Damascus by car, and a weekly air service has been opened for mails and passengers.

In the autumn of 1925, following a revolt of the Jebel Druze in the Hauran, rioting took place in Damascus on Oct. 18, and the city was bombarded by French artillery, when part of the Azm palace and parts of the "Street Called Straight" were destroyed by shell-fire or burned. Soon after the receipt of news of the disturbances in Syria, the High Commissioner (Gen. Sarrail) was recalled by the French cabinet. A long period of disorder followed, but in Sept., 1927, public security was practically normal. In June, 1930, the French High Commissioner promulgated a new republican constitution for the State of Syria. After somewhat difficult negotiations between the French and the Nationalists elections were eventually held in 1932 and the Parliament elected.

Beirut is the residence of the French High Commissioner and the capital of the Lebanese Republic. Damascus was the Federal capital, and has become that of the new State of Syria. Latakia is the capital of the Government of that name, formerly known as the State of the Alawites.

The Lebanese Republic (the former Turkish provinces of Lebanon and Beirut), declared a State by the High Commissioner, under the title of *Etat du Grand Liban*, in 1920, but the constitu-

tion was suspended as a measure of economy in 1932, M. Debbas remaining in control without the assistance of Parliament. The State extends along the Mediterranean littoral from the Palestine frontier to Nahr el Kebir (25 miles N. of Tripoli) and is bounded on E. by the Great Central Depression, known as the Bekas, in which flow the rivers Orontes and Litani. Its total length is about 120 miles, and its width varies from 30 to 35 miles. The estimated area of the Lebanese Republic is about 4,300 square miles, with an estimated population of 579,778. The products of the soil are olives, wheat, grapes, oranges and mulberry trees. Great efforts are being made to develop the district as a summer resort. The capital is Beirut (pop. 150,000), which is the chief seaport and commercial centre, and the seat of the French mandate. Tripoli, the next important town and seaport, will be one of the Mediterranean termini of the Iraq Petroleum Company's pipe line, now under construction. Minor ports are Junieh, Tyre and Sidon. The national flag is the French tricolour with a Cedar of Lebanon on the white band.

Mehemet Münir Bey, 69 Portland Place, W. 1.

Counsellor, Nurettin Ferruh Bey

1st Secretary, Muzafer Kâmil Bey.

3rd Secretary, Cemil Vâfi Bey.

Commercial Counsellor, Kurtoglu Faik Bey.

Archivist, Ali Rıza Bey

Consul in London, Durrî Mazhar Bey, 10 Lower

Sloane Street, S. W. 1

Chancellor, Abdulhat Bey

The Turks belong to the Turanian Race, which comprises the Manchus and Mongols of North China, the Finns, and the Tuiks of Central Asia. Their numbers probably exceed 50,000,000, with the same language, religion and culture, but the actual Turkish State occupies only a small part of the area inhabited by the Turkish Race, the remainder being in Soviet Russia, China, Afghanistan and Persia. Under the Seljuks (Turkish rulers in Anatolia) the conquest of Asia Minor was completed in the 11th century. The Seljuks were succeeded, early in the 14th century, by the Osmanli dynasty, which remained in power until the Great War.

During the 15th, 16th and 17th centuries the Ottoman Empire was one of the strongest Powers in the world, extending from the Caspian Sea to the Adriatic and Hungary, and from the Indian Ocean to Morocco and the Sudan. It comprised Asia Minor, half of Soviet Russia, the Ukraine, the Crimea, the Balkan States and the whole of Arabia. The Black Sea, the Mediterranean, the Red Sea and the Aegean were dominated by Turkish ships, and the Ottoman dominions included not only the Byzantine Empire, but the greater part of the whole Roman Empire.

For two centuries preceding the Great War disintegration had reduced the power and extent of the Turkish Empire, and during the Great War its boundaries were further restricted, Iraq, Syria and Arabia passing into other hands under the Treaty of Sevres. Attempts to wrest further territory were defeated by Gazi Mustafa Kemal, who won a decisive battle at Afion, the results of which were confirmed at the Lausanne Conference.

Turkey now extends over an area of 410,000 sq. miles, from Adrianople to the Caucasus and Persia, and from the Black Sea to the Mediterranean, Syria and Iraq.

Turkey in Europe (31,975 sq. kilometres = 9,256 sq. miles) consists of Eastern Thrace, including the cities of Istanbul (Constantinople) and Adrianople, and is separated from Asia by the Bosphorus at Constantinople and by the *Dardanelles* (Hellespont)—about 40 miles in length, with a width varying from 1 to 4 miles—the political neighbours being Greece and Bulgaria on the west.

Turkey in Asia (738,761 sq. kilometres = 285,246 sq. miles) comprises the whole of Asia Minor, and extends from the Aegean Sea to the western boundaries of Georgia, Eilvan and Persia, and from the Black Sea to the Mediterranean, and the northern boundaries of Syria and Iraq. This area corresponds approximately with *Anatolia* ("Land of the Rising Sun" or Orient) and includes *Cilicia* north of the Gulf of Alexandretta, assigned to France by the Allies, but restored to Turkey by the French Cilicia 18

generally fertile and produces wheat, cotton, wool, sesame, &c., and is capable of considerable agricultural development; the chief port of Cilicia is Mersin.

Population.—The first general census of Turkey was taken on Oct. 28, 1927, and showed the population of the Republic to be 13,660,275, the excess of women over men being approximately 500,000. The population of each of the 8 Regions into which the country is divided was given as follows:—

Region	Sq. Kil.	Population	Per Sq. Kil.
Black Sea	73,621	2,174,425	29
Marmora & Aegean	92,744	2,746,069	29
Mediterranean	56,279	753,639	13
Turkey in Europe	31,975	1,044,306	43
Western Anatolia	71,180	1,303,114	18
Central Anatolia	228,791	3,499,707	15
S.E. Anatolia	40,125	604,303	14
Eastern Anatolia	176,621	1,534,712	8
Total	762,736	13,660,275	18

Government.—Sultan Muhammad VI., the last of the Osmanli rulers, fled from Constantinople to Malta on Nov. 20, 1922, and the Sultanate was abolished by the National Assembly. On Oct. 29, 1923,* the National Assembly declared Turkey a Republic and elected Gazi Mustafa Kemal President. On March 3, 1924, the Assembly passed a law abolishing the office of Caliph and ordering all members of the Ottoman dynasty to leave Turkish territory. The Grand Assembly is a single-chamber legislature elected for four years, and delegates its executive power to ministers acting in its name and responsible to it for their actions.

Religion.—The majority of the inhabitants are Moslems. There are numerous Christians (of the Latin and Eastern rites) in Istanbul (Constantinople) and a considerable number of Jews. On April 20, 1928, the Grand National Assembly passed a law in virtue of which Islam ceased to be the State religion of the Republic. On Nov. 1, 1928, the Grand National Assembly passed a bill establishing the neo-Latin alphabet in place of Turkish characters. Education is nominally compulsory and free. There are primary schools, training schools for teachers, and at Istanbul a university, founded in 1900.

Production.—Although the soil of Asia Minor is generally fertile, agriculture is still very primitive in centres that are not served by railways. The peasant is, however, gradually adapting himself to the more modern methods, particularly in the vilayet of Aydin, Adana, and Mersin. The live stock in 1929 was 12,124,031 sheep, 8,676,405 goats, 2,804,685 mohair goats, 4,718,803 cattle, 496,954 horses, 849,485 asses, 74,803 camels and 496,000 buffaloes. Cereals are abundantly produced, as well as tobacco, raisins, figs, cotton, opium, beet-sugar, nuts, olives, valonia, and liquorice root, and many varieties of fruit are grown. Samsun is the chief centre of the tobacco-growing industry, which is also of importance at Izmir (Smyrna), Imit and Bursa (Brusa). The export of merchandise is considerable and consists principally of opium,

* TURKISH NATIONAL HOLIDAY—Oct. 29 is observed throughout the Republic as a National Holiday.

tobacco, cotton, carpets, gums, mohair, wool, hazel-nuts, raisins and figs. The forests should be a source of wealth, but scientific exploitation is disregarded; beech, pine, oak, elm, chestnut, lime, plane, alder, box, poplar and maple are among the chief varieties of trees. The mulberry is planted for the silk-worm industry, which centres round Bursa and Imit, and this industry, which declined after the war, is now reviving. The mineral wealth of Asia Minor is stated to be considerable, but is almost undeveloped. Chrome ore, zinc, manganese, antimony, copper, borax, corundum (emery), coal and lignite, silver and arsenic, are among the minerals produced.

Communications.—In Europe Turkey has about 208 miles of railway, known as *The Oriental Railway* and run by a French Company. In Asia Minor the position as regards railways is the following:—

Lines under Exploitation.

	Klm
Izmir-Aydin (British)	610
Smyrna-Kasaba (French)	703
Boranti-Aleppo-Nisibin	632
Mudanya-Bursa (narrow gauge) ...	41
Anatolian Railway	1,031
Mersin-Tarsus-Adana	67
Baghdad Railway ..	445
Angora-Kayseri-Sivas	590
Namrun-Sivas	380
Kütahya-Balıkesir	220
Fevzi Pasha-Malatya	253
Samsun-Carşamba, narrow gauge	37

Lines under Construction.

Ulu Kışla to Kayseri.
Filios to Irmak
Malatya to Argana Maden.

There is also a line from Sari Kaniş to the Russian frontier (78 miles, Russian broad gauge) and a narrow gauge line from Sari Kaniş to Erzurum (295 miles), but both lines are in a bad state of repair.

It is the intention of the Turkish Government to construct the following lines, but no contracts have yet been granted: Ereğli-Filios (about 35 miles); Sivas-Erzurum (about 300 miles); Ada Pazari-Bayındır (about 160 miles). There are electric trams in Istanbul, Scutari and Izmir. In 1932 the mercantile marine consisted of 215 steam and motor vessels, with a total net tonnage of 132,784.

Revenue (Budget)	£186,705,599	1932-33	£189,354,800
Expenditure	£186,582,045	1932-33	£189,146,747
National Debt			
Internal Loan	£122,000,000		
Floating Debt from	£15,000,000 to £120,000,000		
External Loan (Turco-American)	£130,000,000		
" " (Zurich)	£14,000,000		
Total Imports	£126,659,893		
Total Exports	127,274,807		
Imports from U.K.	10,361,400		
Exports to U.K.	10,850,161		

Note.—The National Debt figures include Turkey's share of the repartitioned Ottoman Public Debt. The agreement reached between the bondholders and the Turkish Government for the resumption of the services of the Ottoman Public Debt was ratified by the Grand National Assembly on November 30, 1928;

negotiations are taking place (1932) between the Turkish Government and representatives of the Foreign Bondholders with a view to a revision of the agreement.

The Ottoman Public Debt is administered by a Council: S. C. Wyatt (*Delegate of British and Netherlands Bondholders*), M. F. de Closières (French), M. B. Nogara (*Italian*), Vacant post (*Turkish*), A. H. Reid (*Ottoman Bank*), *Commissary*, Zekai Bey; *General Manager*, M. Morel (*acting*). Mr. Wyatt and M. de Closières preside alternately. Negotiations are in progress with a view to the fixation of the Debt on the basis of a revised agreement.

CAPITAL OF TURKEY, ANKARA (Angora), an inland town of Asia Minor, about 200 miles E.S.E. of Istanbul, with a population (Census 1927) of 74,784. Ankara (or Ancyra) was the capital of the Roman Province of *Galatia Prima*, and a marble temple dedicated to Augustus (now in ruins) contains the *Monumentum (Marmor) Ancyranum*, inscribed with a record of the reign of Augustus Caesar. A new city is being laid out on modern lines, with parks, statues and avenues. **ISTANBUL** (Constantinople), the former capital, was the Roman city of Byzantium, and was selected by Constantine the Great as the capital of the Roman Empire about A.D. 325, and renamed by him; it became capital of the Eastern Roman Empire A.D. 364; population (Census of 1927) 673,029 (Istanbul 261,504, Pera 286,970, Scutari 124,555). Other cities are Izmir (Smyrna) 253,845, Adana 72,652, Bursa (Brusa) 61,451, Konya 47,286, Gazi-Ayintap 39,571, Kayseri (Cesarea) 39,544, Edirne (Adrianople) 34,669, Eskişehir 32,103, Diarbekir 31,511, Erzurum 30,801, and Samsun 30,333. There are also 14 localities with 20 to 30,000 inhabitants, 39 with 10 to 20,000, and 79 with 5 to 10,000 inhabitants.

FLAG: Red, with white crescent and star.

BRITISH ENBASSY.

The smallest Republic in South America, on
 the east coast of the Rio de la Plata, situate in
 lat. 30°-35° S and long. 53° 25' 57' 42' W, con-
 taining an area of 72,180 square miles, and a
 population on Dec 31, 1931, of 1,908,082.

Uruguay resisted all attempted invasions of
 the Portuguese and Spaniards until the beginning
 of the 17th century, and 200 years later the
 Portuguese settlements were captured by the
 Spaniards. From 1726-1814 the country formed
 part of Spanish South America and underwent
 many vicissitudes during the Wars of Independence.
 In 1814 the armies of the Argentine
 Confederation captured the capital and annexed
 the province, and it was afterwards annexed by
 Portugal and became a province of Brazil. On
 Aug. 25, 1825, through the heroism of the 33
 liberators (whose memory is perpetuated in the
 name of the province of *Trenta y Tres*), the
 country threw off the Brazilian yoke. This
 action led to war between Argentina and Brazil,
 which was settled by the mediation of the United
 Kingdom, Uruguay being declared an independ-
 ent state in 1828. In 1830 a Republic was
 inaugurated, with a Constitution of Sept. 20, 1830.
 The President is elected by the legislature for a
 term of 4 years and is ineligible for a consecutive
 period of office. By an amendment to the
 Constitution (which came into force March 1,
 1925) an administrative council was appointed
 to share the Executive power with the President.

The country consists mainly (and particularly
 in the south and west) of undulating grassy
 plains. The principal chains of hills are the
 Cuchilla del Haedo, which crosses the Brazilian
 boundary and extends southwards to the Cuchilla
 Grande of the south and east. In no case do the
 peaks exceed 2,000 feet. The principal river is
 the Rio Negro (with its tributary the Yi), flowing

from north-east to south-west into the Rio de la
 Plata. The boundary river Uruguay is navigable
 from its estuary to Salto, about 200 miles north,
 and the Negro is also navigable for a considerable
 distance. Smaller rivers are the Cuareimi, Yagu-
 aron, Santa Lucia, Quequay, and the (ebullat).
 On the south-east coast are several lagoons, and
 the north-east boundary crosses (the Brazilian)
 Lake Merim. The climate is extraordinarily
 healthy, with great uniformity of temperature,
 the summer heat being tempered by the breezes
 of the Atlantic and the geographical position
 causing a high thermometer in winter.

Wheat, barley, and maize are cultivated. The
 wealth of the country is obtained from its pastu-
 rage, which support large herds of horned cattle
 (7,127,922 in 1930) and sheep (20,558,124 in 1930),
 the wool of which is of excellent quality. Gold
 mines exist at Cuñapirú. The exports are
 entirely animal products, and include frozen and
 preserved meat, wool, hides, horn, hair, tallow,
 and jerked beef, the imports are principally
 machinery, textiles and clothing, food substances
 and beverages, coal, oil, timber, fuel and blood-
 stock. The principal imports from the U.K.
 are woollen and cotton goods, hardware, and
 coals. There are 1,722 miles of railway open
 (1929), of which 1,564 miles are in British hands,
 and three short lines owned by the State; 45
 kilometres of the State line from San Carlos to
 Garzón have been opened and 11 kilometres from
 San Carlos to Rocha are now open to traffic;
 and (in 1930) 7,508 miles of telegraph, with
 48,375 miles of telephones. There were 995 post-
 offices, dealing with 136,053,701 letters and
 packets. The language spoken is Spanish.

	1929	1931

The Union of Soviet Socialist Republics.—The federal system was adopted by the 10th All-Russian Congress of Soviets on Dec. 31, 1922. The Soviet Union covers the greater part of the area of the former Russian Empire, from which the independent states of Finland, Poland, Estonia, Latvia and Lithuania have also been formed. The greater part of the remaining territory forms the Russian Socialist Federal Soviet Republic (R.S.F.S.R.), which is in union with other Soviet Republics in Russian territory to form the Soviet Union. Prior to the War of 1914-18 the Russian Empire of the Tsar Nicholas II. covered more than 8,500,000 square miles, with a population of about 183,000,000.

Area and population of the constituent Republics of the Soviet Union are:—

Republic.	Sq miles	Population
I. R.S.F.S.R. (Moscow)	7,638,004	111,630,000
II. Ukraine (Kharkov)...	174,372	31,608,000
III. Transcaucasia (Tiflis)	71,899	6,517,000
IV. White Russia (Minsk)	49,041	5,290,000
V. Turkmenistan (Polterask)	188,609	1,156,000
VI. Uzbekistan (Taskent)	63,640	4,754,000
VII. Tajikistan (Stalinabad)	56,108	1,188,000
	8,241,673	168,143,000

The rural population forms 80 per cent. of the whole.

According to the latest census returns (Jan. 1, 1928) the total population was 146,664,366, of whom 71,020,659 were males and 75,653,707 females. The returns include 29,498 persons over 100 years of age (12,340 men, 17,158 women).

The Union is governed by the Congress of Soviets of the Union, and during the intervals of sessions the supreme authority is vested in the Central Executive Committee of the Union, which consists of the Council of the Union and the Council of Nationalities. The regular session of the Union Soviet Congress is convened by the Central Executive Committee ("Task") of the Union once a year. The Council of the Union consists of 371 members elected by the Soviet Congress of the Union from among the representatives of the several constituent republics, counted in proportion to the population of each republic. The Council of Nationalities is formed of representatives of the constituent and autonomous Soviet Socialist Republics on the basis of 5 representatives from each, and of representatives of the autonomous Provinces of the R.S.F.S.R. on the basis of 1 representative from each. The composition of the Council of Nationalities as a whole must be confirmed by the Congress of Soviets of the Union.

(The autonomous Republics of Ajaria and Abkhazia and the autonomous Province of Southern Ossetia send one representative each to the Council of Nationalities.)

The regular sessions of the Task meet three times a year, and in the intervals the supreme authority is vested in its Presidium, formed by the Task of the Union, of 21 members, amongst whom are included the whole of the Union-Council Presidium and the Presidium of the Council of Nationalities.

Chairman of Presidium, Michael Ivanovitch Kalinin (R.S.F.S.R.). **G. T. Petrovsky (Ukraine);** **M. Musabekoff (Transcaucasia);** **A. G. Tcherviakov (White Russia);** **M. Aitakov (Turkmenistan);** **M. Khazula-Khodzhahoff (Uzbekistan);** **M. Nusratulla (Tajikistan).**

Secretary, A. S. Yenukidsky.

Representatives are elected to the Soviet Congress of the Union by indirect voting, each village Soviet sending representatives to a *Volost Soviet*, the *Volonts* to *Uyezds* (district) *Soviets*, the *Uyezds* to Government *Soviets*, and the last-named to the Congress of Soviets of the Union. The cities and townships *Soviets* send representatives to the Congress of Soviets Union on the basis of 1 deputy for each 25,000 electors, whereas the provincial *Soviets* send 1 deputy for each 125,000 inhabitants.

The principal executive and administrative organs of the Task of the Union are: The Council of People's Commissaries, the Council of Labour and Defence, and the Supreme Court of the Union.

The People's Commissariats of the Union are divided into (1) Federal People's Commissariats for the entire Union, and (2) Joint People's Commissariats of the Union. **Federal People's Commissariats of the Union are:** (1) War and Marine, (2) Foreign Affairs (3) Foreign Trade, (4) Transport, (5) Post and Telegraph. **The Joint People's Commissariats are:** (1) Supreme Council of National Economy, (2) Finance, (3) Internal Trade, (4) Labour, (5) Workers' and Peasants' Inspection. The Federal Commissariats have their representatives in the constituent republics, who are directly subordinated to them. The Joint Commissariats exercise their functions

through corresponding Commissariats of the several constituent republics on their territories.

Each of the constituent republics has within its territory its own Congress of Soviets, its Central Executive Committee (*Tsuk*), and Council of People's Commissaries (*Sovmarkom*), the latter consisting of Chairman, Vice-Chairman, and the following Commissaries: (1) Chairman, Supreme Council of National Economy, (2) Finance, (3) Internal Trade, (4) Labour, (5) Workers' and Peasants' Inspection (all these are subordinate to the People's Commissaries of the Union), (6) Agriculture, (7) Education, (8) Health, (9) Social Welfare, (10) Justice, (11) Internal Affairs (the latter six independent), and also including, with an advisory or deciding vote, according to the decision of the respective *Tsuk*, the representatives of Federal Commissariats of the Union, i.e., of Foreign Affairs, Foreign Trade, War and Marine, Transport, Post and Telegraph.

The Council of Labour and Defence (*Sovet Truda i Oborony*, or *STO*.) is attached and subordinate to the *Sovmarkom*, and in addition to a general direction of commissariats in their economic and military activity, has the power to ratify statutes of joint-stock companies and trusts.

The Supreme Court of the Union is attached to the Central Executive Committee, and has power and jurisdiction (1) to promulgate authoritative opinions on questions concerning general Federal legislation to the constituent republics, (2) to adjudicate controversies between the constituent republics, (3) to try charges against high officials of the Union for offences committed in the discharge of their duties. The Supreme Court consists of 11 members.

To the Council of People's Commissaries (*Sovmarkom*) of the Union is attached a Joint State Political Department, formerly known as the *Tekha*, but since 1922 as the O.G.P.U. (*Obiedinennoye Gosudarstvennoye Politicheskoye Upravleniye*), which is designed to combat political and economic counter-revolution, espionage and brigandage. The Chairman of the O.G.P.U. is a member of the Council of People's Commissaries of the Union. The O.G.P.U. is directed by special rules and regulations, which have not been promulgated. The control of the legality of the acts of the O.G.P.U. is exercised by the Attorney-General of the Union in accordance with a special decree issued by the *Tsuk*.

I SOVIET RUSSIA (R.S.F.S.R.)

Rossiyskaya Sotsialisticheskaya Federativnaya Sovetskaya Respublika.—The Russian Socialist Federal Soviet Republic.

President of the Council of People's Commissars, D. E. Sulimov

Vice-Presidents, D. Z. Lebed, T. R. Ryskulov
Chairman of Supreme Council of National Economy, K. K. Stielevski.

Trade, N. B. Eismont.

Labour, M. M. Romanov.

Finance, V. N. Yakovleva.

Workers' and Peasants' Inspection, N. J. Ilin.

Central Statistical, N. P. Gorbunov.

Education, A. S. Bubnov.

Health, M. F. Vladimirov.

Agriculture, M. K. Muralov.

Social Welfare, I. A. Nagovitzin.

Communal Economy, N. P. Komarov.

The R.S.F.S.R. consists of 50 Governments and includes 11 Autonomous Republics and 20 Autonomous Provinces. *Autonomous Republics*: Bashkir, Tartar, Kirghiz, Mountain, Dagestan, Turkestan, Crimea, Yakut, Karelia, Buriat-Mongol and Volga Germans. *Autonomous Provinces*: Chuvas, Kalmyck, Mari, Votlak, Zyrian (Komi), Olad, Kabardian-Balkarak, Karachai-Circassian, Adighe - Circassian, Tchetchen. From the economic point of view this vast territory is usually divided into "Black Soil" and "Other Zones," the Black Soil Zone being subdivided into (1) Central Agricultural Region, (2) Middle Volga Region, (3) Lower Volga Region, (4) Northern Caucasus, (5) Siberia, (6) Kirghiz Autonomous Republic, (7) Crimea; while the Other Zones are (1) Western Region, (2) North-Western Region, (3) Central Industrial Region, (4) North-Eastern Region, (5) Basins of the rivers Viatka and Votluga, (6) Ural.

Local Government was, and still remains, highly developed. The villages in Imperial Russia had their assemblies (*skhod*) under the presidency of a mayor (*starosta*); they were grouped into "volosts," the latter into districts (*uyezd*), and these into governments (*guberniya*). The districts and governments had their elective councils (*zemstvo*) for the administration of local affairs. Combined with this system of village communities was a highly organised system of co-operative trading, the population being grouped into voluntary local associations usually corresponding with local government areas. The produce of the soil was disposed of in return for manufactures obtained by the society and distributed at the co-operative shops. Municipalities were also administered by elective councils (*dumas*) under the presidency of a mayor (*golova*), but in many cases the local authority of such municipalities and local land councils (*zemstvo*) was overshadowed by the superior authority of the bureaucratic governor. After the Revolution, the village and other administrative units set up *soviets* of workers and peasants, and the provincial councils send representatives to the All-Russian Congress, municipalities having a double representation from their own *sovet* and from that of the province (or district) in which the municipalities are situated.

Education.—Under the Bolshevik régime popular education is administered by a commissary, in whose charge have been placed all educational institutions, theatres, museums, and galleries. Beyond this, the State has monopolised the photo-cinematographic industry and the publishing of manuals for schools of all types, and as the Soviet Government possesses almost all the printing houses, it practically controls the printing and publishing trades. The education of the workers in the towns is facilitated by lectures and school teaching, but among the peasants in the rural districts even the inadequate provision formerly made has in many places been discontinued. In 1921 there were stated to be 20,000,000 pupils in the schools as compared with 8,000,000 in 1914, the number of students attending higher educational centres was stated at 350,000 in 1921; there are two universities in Moscow and 21 in other large centres.

Religion.—The Orthodox Church was disestablished by the Bolsheviks and all its property confiscated. All ecclesiastic schools, seminaries

and academies have been abolished, and the teaching of religion to persons under 18 years of age forbidden. But the law did not forbid the exercise of religion, and churches remained open in virtue of contracts concluded between the congregations and the local authorities. A recent questionnaire addressed to the soldiers of the Red Army shows that 70 per cent. of them believe in a Deity. The clergy live on voluntary donations from their parishioners. On Feb. 14, 1928, the Soviet Government adopted the Gregorian (Western) Calendar. A *Godless Five Year Plan* was embodied in a decree issued by the Council of Peoples' Commissaries in October, 1928, with the object "not to leave a single house of prayer on the territory of the U.S.S.R., and to extinguish in the minds of the people the very notion of God."

Soviet Union Budget, 1931.

Revenue.....Roubles 21,774,018,000
Expenditure....." 20,274,018,000

Debt.—The outstanding Foreign Debt of Russia on Jan. 1, 1917 (before the Revolution), may be stated as under:—

	Debt.
To Great Britain	£622,674,106
To France.....	Francs 3,950,000,000
To U.S.A.	\$822,000,000
To Japan	Yen 256,000,000
To Italy	Lira 36,123,836

Since the revolution various internal loans have been raised, and these were stated to amount on July 1, 1931, to 3,965,700,000 gold roubles.

Defence.—The Red Army, recruited by universal military service, consists of about 800,000 all ranks, including 37 cavalry brigades of about 3,000 men, and about 30,000 sailors serving on land. It was reported that the *Red Air Fleet* was to comprise an organisation of 10,000 aeroplanes for the year 1924; in 1932 it was stated to consist of about 1,500 aeroplanes. The *Red Navy* is believed to consist of 3 battle-ships, 4 old cruisers, 17 destroyers, and 16 submarines. *Civil Aviation* statistics will be found on p. 659.

The Five Year Plan.

The Soviet Five Year Plan (1928-1933).—The avowed object of the Five Year Plan is to increase the industrial and agricultural production of the U.S.S.R. so that it may overtake and outstrip all other nations. For this purpose the territory is being equipped with factories, railroads, steamships, telegraphs, motor vehicles and tractors. The land is to be made to produce food, houses are to be built, and opportunities for recreation provided, so that the population may have these amenities in greater abundance than the peoples of capitalist nations. The Plan has the political aim of making the U.S.S.R. a far more powerful industrial, economical and political State, and the political aim is being pursued at the expense of the people, the products of the soil being employed primarily in payment of imports required for industrial development, even if starvation is thus imposed on the people. The principal industries undergoing development are *asbestos* (at Azbest), *steel* (at Magnetogorsk), *manganese* (at Chiaturl), *tractors* (at Cheliabinsk, Stalingrad and Khar'kov), *wheat* (at Gigant and Verblud), *petroleum* and *crude oil* (at Baku), and *tea* and *oranges* (at Chakwa). The factories are to be provided with

electric energy from Dniepostroy, where a dam is under construction, the work being under the superintendence of U.S. engineers. The political development of the Plan appears to be abreast, in most particulars, and in some directions ahead, of the time schedule; and in April, 1931, M. Kulbyshew, Chairman of the State Planning Commission, stated that the Five Year Plan would be completed in 1932 (one year ahead of the schedule), and the Government had therefore decided to begin work on a new Five Year Plan for 1933-1938.

Agriculture.—The Soviet Board of Statistics publish the following particulars of the harvests.—

Crop	Metric Tons.	
	1929	1930
Rye	20,359,140	24,356,670
Wheat	18,877,800	23,360,070
Barley	7,213,530	7,170,600
Oats	15,739,200	17,846,470
Maize	3,018,660	3,057,470
Millet	3,112,670	3,337,060
Buckwheat	1,513,800	1,199,390
Other Cereals	1,906,630	2,836,550
Potatoes	45,629,700	49,772,100

The Live Stock are stated at:—

Animals.	Metric Tons.	
	1929	1930
Cattle	66,700,000	54,600,000
Horses	34,000,000	31,800,000
Sheep and Goats	147,200,000	89,900,000
Swine	20,900,000	12,200,000

Industry.—The natural riches of Russia in coal, iron-ores, copper, manganese, gold, platinum, timber, naphtha, and so on, are enormous. The value of the industrial output is stated at:—

Ores.	Metric Tons.	
	1928-29	1929-30
Iron	7,265,000	10,012,000
Manganese ..	1,256,000	1,550,000
Copper	772,600	1,080,000
Coal	38,431,000	46,700,000
Refined Oil	10,721,000	14,836,500

External Trade.—The external trade of the U.S.S.R. for 1929-30 is stated as under in thousands of roubles.—

Exports from Russia to	Countries	Imports into Russia from
232,158.	Great Britain ..	160,000
214,254.	Germany ..	234,389
44,579.	U.S.A.	280,360
44,705.	France	33,956

According to the Soviet Customs Returns there was a Balance of Trade in 1929-30 *adverse* to the U.K. of 159,233,000 roubles, and in favour of the U.S.A. (235,780,000 roubles) and of Germany

(*80,135,000 roubles*). The U.K. contributed 9.4 of the Imports and took 27 per cent. of the Exports, whereas the U.S. contributed 33.5 and took 5, and Germany contributed 28 and took 24 per cent.

Board of Trade figures for transactions between Russia and Great Britain.—

	1930	1931
Imports from U.K.	£9,291,000	£9,044,000
Exports to U.K.	34,235,000	32,179,000

Communications.—Length of railroads in use:

Year	Miles
1925-6	46,255
1926-7	47,022
1927-8	48,023
1928-9	48,236

The principal railway lines are the main *European* network from Leningrad, through Moscow to Astrakhan and across the Urals *via* Perm, Ufa, Samara and Saratov, with northern extensions to the Kola Peninsula and to Archangel and running southwards to the Baltic, the Crimea and the Caucasus; the *Trans-Siberian Line* from Chelyabinsk, on the Ural frontier, to Omsk, and round Lake Baikal to Chita and Strzyetensk. From Chita the line crosses the Manchurian frontier (as the Eastern China Railway) to Harbin and Vladivostok, where a northward extension runs to Khabarovsk. The *Amur Railway* connects Strzyetensk with Khabarovsk, and the *Trans-Siberian line* thus connects the western and eastern limits of Russia on Russian territory. The *Trans-Caspian Railway* runs from Krasnovodsk (opposite Baku) to Askabad, Merv, Bokhara, Samarkand, Khokand and Andijan, with a 200-mile branch from Merv to Kushk (near Herat) on the Afghanistan border. The *Orenburg-Tashkent Line*, from the European boundary, across the Kirghiz Steppe to Kazalinsk, Perovsk and Tashkent, whence a short line connects with the *Trans-Caspian system*. The *Trans-Caucasian Line* runs through Georgia, Azerbaijan and Armenia, from Batum and Poti, on the Black Sea, *via* Tiflis, to Baku, on the Caspian, where it is met by the European system of Rostov on the Don. From Tiflis branches run to Kars, and *via* Erivan to Mount Ararat on the Armenian frontier, and to the Persian frontier at Julfa. There are in the Soviet Union (1927) 228,600 miles of inland waterways, of which 54,500 are navigable by steam vessels, and nearly 110,000 miles by rafts. The principal seaports are Leningrad and Kronstadt on the Gulf of Finland, Sevastopol and Novorossiysk (Black Sea), Aichangel on the White Sea, and Ekaterininsk on the Kola River (Murmansk), Vladivostok (Sea of Japan), and Petropaulovsk in Kamchatka.

Posts and Telegraphs.—In 1929 the post offices handled about 650,000,000 letters and postcards; the length of telegraph lines was stated at 156,000 miles, with over 8,000 offices.

Capital.—On March 14, 1918, the seat of Government was transferred from Petrograd to Moscow, which had a population in 1931 of about 2,800,000. LENINGRAD (before the war "St. Petersburg," and until the death of Lenin, "Petrograd"), the former Capital, founded by Peter the Great on the banks of the Neva in 1703, had a population in 1931 of 2,783,000. Other centres are Saratov (220,000), Rostov (300,000),

Samara (150,000), Nijni-Novgorod, re-named Gorky in 1932, (120,000), Voronezh (100,000), Kazan (180,000), Krasnaya, formerly Ekaterinodar (150,000), Astrakhan (180,000), Orenburg (220,000), Irkutsk (124,000), Tomsk (50,000), Omsk (170,000), Vladivostok (100,000). Archangel had about 40,000 inhabitants in 1920.

II.—THE UKRAINE (Ukraine.)

President, V. J. Tchubai.

On Nov. 22, 1917, the greater part of "Little Russia," consisting of the former governments of Chernigov, Kharkov, Kieff, and Poltava (with Ekaterinoslav and Kherson in "South Russia," and Podolia and Volynia in "West Russia"), was encouraged by Germany to declare itself independent as the *Republic of the Ukraine*. The new Republic was invaded by Germany in 1917-18, and subsequently overrun by Bolshevik forces, and a military and economic alliance was concluded between Soviet Russia and the *Ukraine Socialist Soviet Republic* (Dec. 22, 1920). The majority of the inhabitants belong to the Greek Orthodox Church. The chief town and seat of government is Kharkoff (pop. 1923, 372,000), other large centres being Odessa, the great port on the Black Sea (with a population in 1923 of 376,000), Kieff (pop. 1923, 406,000), Ekaterinoslav (pop. 1923, 127,000), Nikolayev (81,000), Poltava (88,000), and Taganrog (100,000). The Ukraine is the great cereals-growing district of Russia, and before the Great War the harvests exceeded 1,000,000,000 poods; during the Civil War the production was reduced to 285 million poods, but in 1923 it had increased to 700 millions. In 1922-3 there were 112 sugar-beet factories (200 in 1931) producing 10,000,000 poods (500 millions in 1924-25). The Ukraine also contains large deposits of iron ore and coal, and is the principal source of the European supply of quicksilver. Agriculture is the principal industry, and there are large iron and steel works. Before the Great War the exports from the Ukraine (grain, sugar, hides, bristles, quicksilver, and wool) were of the annual value of about £75,000,000, and the imports (manufactured goods and machinery) about £50,000,000.

(CAPITAL, Kharkoff. Population (1930), 530,600. Other towns: Dniepropetrovsk, 233,000; Kieff, 514,000; Nikolaieff, 105,000; Odessa, 481,000; Poltava, 92,000.

III.—TRANSCAUCASIA. (Zakavkarskaya F.S.S.R.)

President of the Council of People's Commissars, M. D. Orakhelashvili.

The Transcaucasian Federation consists of three Socialist Soviet Republics:

Republic	Sq. miles.	Population.
Armenia	15,065	1,339,959
Georgia	25,470	2,135,233
Azerbaijan	33,570	2,463,292
	74,105	5,938,486

Armenia, or Hyastan. (S.S.S.R.)

President of the Council, M. S. Hambartsumian. Armenia occupies the uplands between the Iranian plateau and Asia Minor, and is bounded by the Black Sea on the N., by Kurdistan on

the S., by Azerbaijan on the E., and by Turkey on the W. Until the outbreak of the Great War it was shared between Tukey (35,600 sq. miles), Russia (50,597 sq. miles), and Persia (6,518 sq. miles). The rivers Euphrates, Tigris, Aras, Kur, and Tchorokh take their rise within its boundaries, and at the meeting of the former Turkish, Persian, and Russian boundaries is *Mount Ararat* (17,160 feet), the traditional resting place of "Noah's Ark." In the uplands the climate is severe, but in the valleys and plains the soil is fertile, producing all kinds of cereals, cotton, rice, sesame, hemp, flax, and tobacco. Sericulture (silkworm breeding), sheep-breeding, and fruit growing are capable of great development. Armenia has great mineral resources hardly as yet developed. Naphtha, sulphur, bitumen, and nitre abound, while the mountains yield salt (mineral and in solution), gold, silver, copper, lead, iron and valuable marbles, there are also numerous hot and cold mineral springs (similar in nature to those of Vichy), more than half the supply of copper from Russia was derived in 1914 from *Soviet Armenia*, and the value of carpets manufactured in 1914 exceeded 10,000,000 gold roubles. The Armenian Church is the oldest established Christian church, Christianity having been recognised as the State religion in 300, and from the 5th century there is a national language and literature. On account of their religion the Armenians have suffered a general persecution by Islam, particularly in the *vilayet* of Sivas, Bitlis, Diarbekir, Mamuret-el-Aziz, Van, and Erzerum, where massacres have frequently occurred. In 1915-17 there were wholesale deportations and massacres of the Christian population of Turkish Armenia, while the Armenian Christians of Azerbaijan and of Russian Armenia were similarly treated by Turkish and Kurdish hordes. In 1918 the Supreme Council of the Allied Powers recognised the independence of the *Republic of Armenia*. Under the Treaty of Peace with the Allies (May 11, 1920), Turkey recognised the independence of Armenia, with its capital at Erivan. In 1920 a Bolshevik movement set up the *Armenian Socialist Soviet Republic*, on the lines of the Moscow government.

CAPITAL, Erivan; population, 65,000. Lennikan (formerly Alexandropol) 43,000.

Georgia, or Sakartvelo.

(G.S.S.R.)

President of the Council, M. Ivanoff Kavkazsky

The Socialist Soviet Republic of Georgia includes two autonomous Republics (Abkhazia and Adjara), and one autonomous Province (Southern Ossetia).

Georgia, a former Kingdom in Transcaucasia with a history of more than 2,000 years as a State, was annexed by Russia in 1801 in violation of the Treaty of Alliance of 1783. At the beginning of 1918 it regained its independence, but in 1921 the country was occupied by Bolshevik forces and became a member of the Transcaucasian Federation. *Soviet Georgia* is bounded on the N. by the Caucasian Mountains, on the S. by Armenia, on the E. by the Republic of Azerbaijan, and on the W. by the Black Sea. There are 970 miles of railway, the trunk line connecting the Black Sea ports of Poti and Batoum with Baku, on the Caspian. Batoum and Baku are also connected by a petroleum pipe-line. The manganese ore beds are the richest in the world,

more than one-half of the world's supply being derived from the Tchiatury mines (in the district of Sharopausky) in 1914. There are also abundant supplies of coal (5 million poods in 1914) and over 500 mineral springs partly unexploited. Wine is produced in considerable quantities, and the tobacco plant (chiefly in Abkhazia) yielded 800,000 poods in 1914, a great deal of which was imported by Egypt and produced as local grown. Timber (especially box) is an important industry. Oil wells with unproved quantities of crude oil have been discovered in many places, particularly in the Shirak Steppe. The chief town and seat of government is Tiflis, population 300,000, the administrative centre of Abkhazia being Sukhum (62,000), and of Adjara, Batum (32,000), other large centres being Kutais (50,000) and Poti (21,000).

CAPITAL, Tiflis. Population (1925), 400,000.

Azerbaijan.

(A.S.S.R.)

President, M. Musoabekoff

Azerbaijan, on the south-western shore of the Caspian Sea, extends from the Caucasus in the north to Persia in the south, and from the Caspian on the east to Armenia and Georgia. It includes the provinces of Baku, Hanjin (Ehsavetpol), the district of Zakatala and the autonomous territories of Nakhichevan and Nagorni-Karabach. More than 75 per cent. of the people are Muhammadans. The *Azerbaijan Socialist Soviet Republic* entered the Union as a Member of the Transcaucasian Federation on Dec 31, 1922. The Republic is very rich in minerals (naphtha, magnetic ironstone, and manganese), but oil is the principal industry, concentrated in the Baku region, the production being 456,800,000 poods in 1914, and 213,000,000 poods in 1922-3. Fishing is also important, and 15,000,000 poods of caviare were produced in 1922. The principal crop is cotton.

The CAPITAL is Baku (pop. 460,000) on the shore of the Caspian Sea, the centre of the petroleum industry. Baku is connected by railway with Batum (Georgia) on the Black Sea, via Tiflis, and with Moscow, via Rostov. Other towns are Hanjin (60,000), Kuba (14,000) and Nucha (23,000).

IV.—WHITE RUSSIA.

(Byelorussiya.)

President (and Chairman of the Central Executive Committee), A. G. Tchervyakoff.

The independence of White Russia was recognised by *Soviet Russia* in 1919, and a military and economic alliance was concluded Jan. 16, 1921. The independent republic covers the former government of Minsk and parts of Vitebsk and Moghiler. The political neighbours are Lithuania and Poland on the west, and the Ukraine on the south. The capital is Minsk (pop. 131,530), where there is a University founded by the *Soviet Government*, other towns are Gomel (87,000), Bobruisk (51,000) and Moghileff (50,000).

CAPITAL, Minsk. Population, 131,530.

V.—TURKMENISTAN.

(T.S.S.R.)

President, M. Atabekoff.

Turkmenistan is bounded on the west by the Caspian Sea and on the south by Persia, with Afghanistan as a south-eastern neighbour.

Eighty-five per cent. of the inhabitants are Muhammadan Turkomans, with about ten per cent. Muhammadan Uzbeks and five per cent. Russians of the Orthodox faith. The seat of administration is temporarily at Poltarask (formerly Achabad), other centres being Merv (22,000) and Karichi (20,000). Krasnovodsk is a port on the Caspian and a railway terminus on the Trans-Caspian line.

CAPITAL, Poltarask (52,000).

VI.—UZBEKISTAN.

(U.F.S.R.)

	Sq. miles.	Population
Bokhara	50,000	2,000,000
Khiva	13,640	400,000
	63,640	2,400,000

President, Achun Babsaief.

Bokhara lies between Turkmenistan (on the W.), the Kara Kalpak territory of the R.S.F.S.R. (on the N.), and is bounded on the south by Afghanistan. The majority of the inhabitants are Muhammadan Uzbeks. The former capital (Old Bokhara) is a station on the Russian Trans-Caspian Railway. The principal products are rice, wheat, fruit, hemp, cotton, silk, and carpets. Exports (mainly to Russia) are agricultural products and silk and cotton manufactures, imports are principally manufactured goods and sugar. The Emirate was abolished in 1920 and the Emir fled to Afghanistan. A Soviet Republic of Bokhara was established and its independence was recognised by Soviet Russia by treaty of March 4, 1921.

Khiva, or *Khorezm*, formerly the Khanate of Khiva, lies between Bokhara and the Kara Kalpak territory of the R.S.F.S.R., and has a population of whom about half are nomads, and nearly all Muhammadans. The country occupies the fertile delta of the Oxus and is highly productive (rice, wheat, cotton, silk, fruit, hemp).

CAPITAL OF UZBEKISTAN, Tashkent (population 700,000). Other towns: Samarkand (206,000), Andjau (80,000), Bokhara (50,000), Kokand (70,000), Namagan (71,000). Khiva has about 20,000 inhabitants.

VII.—TADJIKISTAN

Tadjik—The autonomous Soviet State of the Tadjik lies between Bokhara (on the W.) and the Kara Kirghiz territory of the R.S.F.S.R., with Afghanistan as a southern neighbour. The inhabitants are largely nomads, and almost all are Muhammadans. The estimated area is 56,208 square miles, with a population of about 2,000,000.

CAPITAL, Stalinabad, population, 6,000. Other centres, Kojent 38,000, and Dura-Tube 22,000.

BRITISH EMBASSY

(Sofskaya Naberezhnaya 14, Moscow.)

British Ambassador, His Excellency Sir Esmond Ovey, K.C.M.G., M.V.O. (1929). £7,500
Counsellor of Embassy, W. Straug, C.M.G.
and Secretary, A. H. Hamilton-Gordon.
3rd Secretary, J. M. E. Vyvyan
Commercial Counsellor, G. P. Paton, C.B.E.
Archivist and Accountant, G. W. Vincent.

BRITISH CONSULAR OFFICES.

Leningrad—Consul-General, R. W. Bullard, C.I.E.
Vice-Consul, F. H. Todd; A. J. Cave.
Moscow—Consul, T. C. Rapp, M.O.
" Vice-Consul, Leslie Pott.

VENEZUELA.

(Estados Unidos de Venezuela.)

President, Gen. Juan Vicente Gómez, elected June 19, 1931.

Interior, Dr. Pedro Rafael Tinoco.
Foreign Affairs, Dr. Pedro Iturrigalera Chacón
Hacienda (Treasury), Señor Efraim González.
Fomento (Public Development), Señor R. Coyama Martínez.
Public Works, Dr. Centeno Grau.
Education, Dr. R. G. Rincones.
War and Navy, Gen. E. L. Contreras.
Public Health and Agriculture, Señor Juan E. Paris.

Envoy Extraordinary in London, Dr. Diógenes Escalante, 50, Pall Mall, S.W.1.
1st Secretary, Oscar Aguilar.
and Secretary, J. A. López Rodríguez.
Commercial Agent, Alvaro Parra Muñiz.
Vice-Consul, C. Gurtubay.
Consul-General, Liverpool, S. A. Mendoza.
Consulates at Birmingham, Cardiff, Glasgow, Newcastle-upon-Tyne, Leith and Hull.

The most northerly Confederation of South America, situated approximately between 2° 40' S. lat. and 12° 26' N. lat. and 50° 52'–73° 15' W. long. It consists of 20 States and 2 federal territories. The best authorities calculate the actual present area to be approximately 363,728 square miles. The census of 1925 gave the population as 3,026,878.

Venezuela lies on the north of the South American continent, and is bounded on the north by the Caribbean Sea, west by the Republic of Colombia (with which Republic the boundary is in dispute), east by British Guiana, and south by Brazil. Included in the area of the Republic are over 70 islands off the coast, with a total area of about 14,650 square miles, the largest being Margarita, which is politically associated with Tortuga, Cubagua, and Coche to form the newly constituted State of Nueva Esparta. Margarita has an area of about 400 square miles.

Venezuela was visited by Columbus in 1498, and in 1499 by Alonso de Ojeda and Amerigo Vesputti, the former naming the Gulf of Maracaiibo Venezuela, or "Little Venice" (on account of the Indian pile built settlements on the coast and shores of the lake), and the name was afterwards extended to the whole of the Orinoco basin. In 1550 the territory was formed into the captaincy-general of Caracas, and the country remained under Spanish rule until the revolt under Simon Bolívar, a native of Caracas, who defeated the Spanish forces in the battles of Lagunetas (1823) and Carabobo (1821), and thus secured the independence of the country. Bolívar was an untiring hero in the cause of independence, and through his efforts (and those of his adjutant Sucre) Venezuela, Ecuador and Colombia (Upper Peru) achieved their freedom from Spain, while Peru was enabled to establish its independence in consequence of his victories. He died in 1830, at the age of 47, and his remains were re-interred at Caracas in 1824. Venezuela formed part of the Federal Republic of Colombia from 1822–1830, since which time it has been independent. There have been many revolutions since 1846, particularly in 1849, 1868, 1889, 1891, 1900, and 1908. In 1854 President Monagas

liberated the African slaves, and in 1864 President Falcón divided the country into States and formed them into a Federal Republic. The present constitution rests upon the fundamental law of June 13, 1959, under which the government is that of a Federal Republic of twenty autonomous States, a Federal District, and two Territories, with a President elected by the Federal Congress for seven years; a new Constitutional Law of 1965 left that position unchanged.

The Eastern Andes from the south-west cross the border and reach to the Caribbean Coast, where they are prolonged by the Maritime Andes of Venezuela to the Gulf of Paria on the north-east. The main range is known as the Sierra Nevada de Mérida, and contains the highest peaks in the country in Picacho de la Sierra (15,420 feet) and Salado (13,878 feet), the maritime ranges containing the Silla de Caracas (8,532 feet). Near the Brazilian border the Sierras Parima and Pacaraima and on the eastern border the Sierras de Rinconcito and de Uaupamó enclose the republic with parallel northward spurs, between which are valleys of the Orinoco tributaries. The Sierra Parima contains Yapurana (7,175 feet) and Uuida (8,120 feet), and Para Calma contains Maraguaca (8,228 feet) and Roraima (8,530 feet), the latter being on the Venezuela-Guiana boundary. The slopes of the mountains and foothills are covered with dense forests, but the basin of the Orinoco is mainly *llanos*, or level stretches of open prairie, with occasional woodlands.

The principal river of Venezuela is the *Orinoco*, with innumerable affluents, the main river exceeding 1,500 miles in length from its rise in the north-western mountains of the republic to its outflow in the deltaic region of the north-east. The *Orinoco* is navigable for large steamers from its mouth for some 700 miles, and by smaller vessels as far as the *Maipures* Cataract, some 200 miles further up stream. Among the many tributaries of the main stream are the *Ventuari*, *Caura* and *Caroní* from the south, and the *Apure* (with its tributary the *Portuguesa*), *Arauca*, *Meta*, and *Guriari* from the west, the *Meta* and *Guriari* being principally Colombian rivers. The upper waters of the *Orinoco* are united with those of the *Rio Negro* (a Brazilian tributary of the *Amazon*) by a natural river or canal, known as the *Canguiare*. The coastal regions of Venezuela are much indented and contain many lagoons and lakes, of which *Maracaibo*, with an area exceeding 7,000 square miles, is the largest lake in South America. Other lakes are *Zulia* (200 square miles), south-west of *Maracaibo*, and *Valencia* (216 square miles), about 1,400 feet above sea-level in the Maritime Andes. The *Zanos* also contain lakes and swamps caused by the river floods, but they are dry in the summer seasons.

The climate is tropical and, except where modified by altitude or tempered by sea breezes, is unhealthy, particularly in the coastal regions and in the neighbourhood of lowland streams and lagoons. The hot wet season lasts from April to October, the dry cooler season from November to March.

The principal industries are agriculture and cattle raising. The oilfields are of increasing importance, the production being 136,890,784 barrels in 1930 and 128,770,000 barrels in 1931.

The principal imports are cotton prints and shirtings and cotton drill, mainly from the U.K.,

and hardware, principally from the U.S. The principal articles of export are petroleum (127,506,930 barrels in 1929), coffee (64,368 metric tons in 1929); cacao (21,128 metric tons in 1929); goatskins, asphalt, sugar, hides, and balata. The U.S. is the principal customer.

There are about 680 miles of railway in operation.

Spanish is the language of the country.

Revenue	1930-31. £8,000,000	1932-33 £5,934,000
Expenditure	8,000,000	5,730,000
Internal Debt	1,000,000	1,000,000
External Debt	Nil.	Nil.

Total Imports ...	1928 £15,908,520	1929 £17,008,800
Total Exports	24,382,200	30,834,000

Imports from U.K. (1930-31) ..	1,668,761	957,357
Exports to U.K. (1930-31) ...	798,312	641,964

The exchange at par = 25'25 Bs. = £ sterling.

CAPITAL, Caracas. Population (1925), 135,253; other principal towns are Maracaibo (74,767), Valencia (36,804), and Barquisimeto (23,109).

FLAG: Three horizontal bands, yellow, blue, red (with seven white stars on blue band).

Secretary, Dr. D. Protić.

Military Attaché, General Nenadović.

Yugoslavia consists of the former Kingdoms of Serbia and Montenegro and of Croatia and Slavonia, part of the Banat, Bosnia, Herzegovina, part of Carniola, and part of Styria, and has an estimated area of 248,050 square kilometres (94,230 square miles), with a population (Census 1931) of 13,930,918.

Montenegro (*Crna-Gora*) was, before the Turkish occupation of the remaining territory, a province of the Serbian Empire. Its independent existence ended with the decision of its Parliament (Nov. 29, 1918) to depose King Nicholas and reunite with Serbia. The chief towns are Cetinje (pop. 5,000) and Podgorica.

Pre-war Serbia had no seaboard, but the inclusion of Croatia, Dalmatia and Montenegro in the Kingdom of Yugoslavia gives access to the Adriatic down a lengthy coast. The principal Yugoslav ports are Sušak, Split, Dubrovnik and Kotor, and by an agreement with the Greek Government Yugoslavia has a free zone at the port of Salonika. In 1926 there were 4,050 miles of normal gauge and 1,083 of narrow gauge railway in operation. The Danube forms a great commercial highway, and the tributary rivers Sava and Tisa provide other important shipping routes; the port of Belgrade is now the second busiest on the Danube. The Paris-Istanbul service of the French Aviation Company (*via* Prague, Vienna, Budapest) calls daily at Belgrade, which has also regular air services to Bucharest and Salonika; a national company connects the chief towns with the capital. The Army on a peace footing consists of 130,000 officers and men, the war strength being about 250,000.

The Greek Orthodox, Roman Catholic, Protestant, Muhammadan and Judaic faiths are recognised by the State; nearly 47 per cent of the population is of the Greek Orthodox faith. Education is compulsory and elementary education is free. In 1930 there were about 10,000 elementary schools, with 21,000 teachers and 1,000,000 pupils; about 20,000 attend continuation schools, and some 70,000 receive instruction at technical colleges. There are Universities at Belgrade, Zagreb, Ljubljana and Skopje.

The principal industry is agriculture, over 80 per cent. of the population being engaged therein. In 1929 about 2,250,000 acres under wheat yielded 2,600,000 tons of wheat; maize (5,730,000 acres, 4,200,000 tons), barley (1,200,000 acres, 420,000 tons), oats (1,000,000 acres, 350,000 tons), rye (600,000 acres, 220,000 tons); about 500,000 acres are under vines, which yielded 60 to 70 million gallons of wine in

1929. The live stock in 1930 included 3,730,000 cattle, 1,141,000 horses, 7,736,000 sheep, and 2,700,000 swine. The mineral resources include coal (output 6,000,000 metric tons in 1929), iron, copper, lead, chrome ore, antimony, &c. The principal exports are maize, wheat, timber, live stock and meat products, prunes, eggs, poultry, skins and minerals; the imports are chiefly textile manufactures, machinery, food products and coal.

(Villa Borghese, Rome)

THE International Institute of Agriculture at Rome was founded in 1905 as the result of a Convention made between the representatives of 40 different countries. The number of nations subscribing to the Convention is 72, and the Institute may be regarded as the pioneer of official international institutions, and as the most representative of all. It is estimated that the countries and colonies adhering to the Institute represent over 95 per cent of the population of the world.

The following is a complete list of the countries now adhering to the Convention of 1905, and therefore represented at the Institute and contributing to its funds —

Abyssinia.	Italy
Argentina.	Libya.
Austria.	Cyrenaica.
Belgium.	Italian Somaliland.
Belgian Congo.	Tripoli.
Bolivia.	Japan
Brazil.	Latvia
Bulgaria.	Lithuania.
Chile	Luxemburg.
China	Mexico.
Colombia.	Netherlands
Cuba.	Netherlands East
Czechoslovakia.	Indies
Denmark.	Nicaragua.
Ecuador.	Norway.
Egypt	Panama.
Estonia.	Paraguay.
Finland.	Persia.
France.	Peru
Algeria.	Poland
French West Africa.	Portugal.
Indo-China	Rumania.
Madagascar.	Russia.
Morocco.	San Marino.
Tunis.	Siam
Germany	Spain
Great Britain and	Sweden
Northern Ireland	Switzerland.
Australia.	Turkey
British India	United States
Canada.	Hawaii.
Irish Free State.	Philippine Islands
Union of South	Puerto Rico.
Africa.	Virgin Islands.
Greece.	Uruguay
Guatemala.	Venezuela.
Haiti.	Yugoslavia.
Hungary.	

The essential objects of the Institute are defined in Article 9 of the Convention and may be summarised as follows:—

The Institute, confining its activities to the international sphere, shall:—

Collect, examine and publish, with the least possible delay, statistical, technical and economic information with regard to farming, crop and live-stock production, trade in agricultural products and the prices current on the different markets;

Indicate the wages paid for farm work;

Record any new diseases of crops which may have appeared in any part of the world, showing the countries affected by such diseases, their progress and, where possible, any effective measures for their control;

Study questions concerning agricultural co-operation, insurance and credit in all their forms; collect and publish all information that may be useful in the various countries for the

organisation of systems of agricultural co-operation, insurance and credit;

Submit, should occasion arise, for the approval of the various Governments, measures for the protection of the common interests of farmers, and for the improvement of their conditions.

The Institute has its seat in Rome, in a palace in the Villa Borghese, specially erected through the munificence of H.M. Victor Emmanuel. The Governing Body consists of a General Assembly of Delegates of the adhering Governments, meeting once every two years, and of a Permanent Committee of Delegates, mostly resident in Rome, acting as its executive. Apart from the General Secretariat to which, in addition to the ordinary administrative offices, the Section of Agricultural Legislation is attached, there are special bureaux dealing with General Statistics, Agricultural Science, and Agricultural Economics, respectively.

The Library of the Institute is one of the largest and best stocked of libraries specialised in agriculture, particularly on the social and economic side. In addition to purchases the Library receives a number of gifts from Governments, institutions and from private sources. The material is arranged and catalogued in accordance with the most modern methods. Thus the Library offers quite unusual facilities for the study of agricultural problems, and permission to utilise its resources is readily accorded to all properly accredited persons. Up to the present the growth of the Library has resulted in severe pressure on the space originally provided in the main building. A remedy is now being found in the erection of an annexe for which the funds are supplied by the special Royal Commission administering certain properties on behalf of the Institute.

Information on agricultural questions is supplied by the Institute mainly through its various publications, issued in English and French and, in some cases, also in other languages. The regular publications have for many years included two Year-Books, the *International Year-Book of Agricultural Statistics* and the *International Year-Book of Agricultural Legislation*, as also the *International Review of Agriculture*, published monthly, and in three separate sections, dealing respectively with *Agricultural Statistics*, *Agricultural Science and Practice*, and *Agricultural Economics and Sociology*, in addition an *International Bulletin of Plant Protection* appears monthly.

Among the newer publications, special mention may be made of the Economic Commentary on the Year-Book of Agricultural Statistics, published under the title of *The Agricultural Situation in the year in question*, of *Farm Accountancy Statistics for 1928-29*, and also of *Forestry Statistics for 31 Countries*. The first issue of the "Economic Commentary" early in 1931 was followed by that relating to the agricultural year ended July 31, 1931, published in January 1932. The volume for 1931-32 is due to appear early in 1933. The second issue contains a full discussion of the factors and course of the agricultural crisis in relation to the general economic crisis, and of its effects on the markets of agricultural products; a special chapter on international action on behalf of agriculture which distinguished the period reviewed; and as before notes on Government

and unofficial action taken in the interests of producers, and on the economic conditions of farmers and farming in over fifty countries of the world. *Farm Accountancy Statistics for 1928-29* is designed to be the first of an annual series containing the accountancy results of farms of 16 countries of Europe, prepared with the collaboration of the respective Accountancy Offices. It is expected that future issues will include also results from overseas countries, the U.S.A., Canada, Union of South Africa, Japan, &c. These statistics are not intended to institute any direct comparison between financial results, but rather to throw light on the influence of natural and economic conditions on the returns of different types of farms, and to serve as a basis for theoretical and practical enquiries. *Forestry Statistics* have for two years past been included in the Year-Book of Agricultural Statistics, but the growth of the material collected on forestry has made it advisable to issue a separate publication, and the present volume contains statistics relating to a series of years and to 31 countries. The data have special reference to forest composition and production and to the international trade in timber. In addition a statistical monograph on world trade in maize has just appeared. During 1932 valuable lists were published or brought up to date showing the experimental stations and similar institutions, and institutions for agricultural education, in tropical countries and in the large colonising nations. An international Directory of Agricultural Engineering Institutions with a glossary in several languages of names of agricultural machines, &c. The various publications of the Institute may be obtained in London from Messrs. P. S. King and Son, or may be ordered direct from the Institute.

The economic work of the Institute comes under the purview of its expert *Agricultural Economic Committee*, which advises on the economic and statistical programme in its international aspects in general, with special reference to the requirements of the Economic Consultative Committee of the League of Nations. The establishment of this Committee completes the list of advisory bodies required to give the cachet of authority to the Institute's work. The *International Agricultural Scientific Council*, through the expert members of its various Commissions, is in a position to advise on any purely technical questions that may arise, and the *Permanent International Commission of Agricultural Associations* provides means for ascertaining the views of practical agriculturists. At the same time liaison with other bodies interested in agriculture is maintained by the *International Commission for Co-ordination in Agriculture*.

The *World Agricultural Census of 1929-30*, undertaken by the Institute with the object of obtaining on a uniform basis as complete an inventory as possible of the agricultural resources of the world, has, as a result of very careful and detailed work of preparation, achieved a large measure of success. The number of countries which made their census in accordance with the standard forms prepared by the Institute was 44, and many completed returns are already available. A beginning has been made with the publication of these results, and in order to facilitate their utilisation they are being issued separately for each country as they come to

hand, in as uniform a shape as possible, and in English and French as the most generally known languages. General and methodological studies interpreting the documentation thus collected constitute the second stage in the scheme of work which the Institute proposes to accomplish, on the basis of the information supplied by this first world census of agricultural production. In consequence of the prevailing economic crisis some difficulties are being experienced in the execution of the complete programme, but the General Assembly at its meeting in October resolved that a priority should be given to this important undertaking, and every effort used to secure the speedy publication of the results.

For general financial and other reasons, public activities of the Institute in connection with special Conferences and Congresses were curtailed during 1932, but a meeting was held during May under the auspices of the Tropical Commission of the Agricultural Scientific Council, at which, *inter alia*, reports on the agricultural crisis in relation to native agriculture in different tropical countries were presented, leading to a valuable discussion of certain practical issues involved in a problem which has recently become one of major importance.

The 11th General Assembly in October was held under the Presidency of the High Commissioner for India, Sir Bhupendra Nath Mitra. Finance problems, the World Census, definition of the relations of the Institute to other Organisations and to Conferences also dealing with agriculture internationally, were among the chief items on the Agenda. The most important feature of the meeting, however, lay in the announcement that the prolonged pourparlers and negotiations between His Exc. De Micheli, President of the Institute, and the authorities of the League of Nations, with reference to the organic relations between the two institutions, had now reached a successful issue. By the accord that has now been established through a resolution adopted by the Council of the League on October 2, 1932, the Institute is recognised as duly qualified to act as the League's advisory organ in agricultural matters, and the resolution at the same time outlined the machinery necessary for implementing this accord. The General Assembly accepted with acclamation the terms of the arrangement now so happily concluded between the two great international institutions. This ratification of a collaboration that has effectively been in existence for a number of years should go far to fortify the position of the Institute in carrying out its obligations under its Foundation Charter of 1909, in regard to the furtherance of agricultural progress and the welfare of farmers in all countries.

President: His Exc. Prof. G. De Micheli (Delegate of Italy).

Vice-President: M. Louis-Dop (Delegate of France).

British Delegate: H. L. French, C.B., O.B.E. (Ministry of Agriculture and Fisheries).

Delegate of the Irish Free State: M. Harvey Raiffeley.

Delegate of the Indian Empire: Sir Bhupendra Nath Mitra (High Commissioner) K.C.S.I. K.C.I.E.

Delegate of the Union of South Africa: His Exc. Barend Pienaar.

Secretary General: Prof. Alessandro Brizi.

THE WEATHER OF 1931-32.

(1932) Following a dull wet summer, October provided a pleasant contrast by its dryness and sunniness. The first half of the month was generally mild, but cold conditions with severe frost at night prevailed during the last ten days. Unsettled mild conditions with south-westerly to westerly winds prevailed until the 10th. Heavy rain fell in Scotland and Ireland during this period. Falls of 50 mm. or more were recorded locally on the 1st, 4th and 5th. Thunderstorms occurred in the Orkneys on the 2nd, and locally in England on the 7th. After the 10th anticyclonic conditions prevailed in the south and by the 15th a large anticyclone covered the British Isles. About the 10th a colder type of weather set in. A ridge of high pressure across the country from the 1st to 3rd was followed by northerly winds on the 4th and 5th associated with an anticyclone to the west of the British Isles. Snow fell in parts of northern England and Scotland on the 4th and 5th. On the 6th and 7th an anticyclone covered the southern districts while northern districts came under the influence of a depression near the Faroes. In Scotland and the north of Ireland moderate rain fell on the 7th. Northerly winds prevailed during the next few days over the greater part of the British Isles. Severe frost occurred at night, and temperatures below 30° F. in the screen were recorded at many places during the nights of the 14th to 17th. On the 18th south-westerly winds brought milder conditions to all districts, temperatures of 60° F. and over being recorded. Monthly pressure means exceeded the normal by 7 or 8 millibars over the greater part of England and Wales. Over England and Wales there was a prevalence of northerly winds, but on the whole the month was quiet. Although during the first half of the month maximum temperatures were above the normal, a cold spell from the 11st to 13th caused monthly mean temperatures to be about or below the normal in England and Wales. In Scotland and Ireland they were generally above normal. The extreme temperatures of the month were: (England and Wales) 72° F. at Cromer on the 6th, and 15° F. at Rickmansworth on the 17th and 18th; (Scotland) 70° F. at Stonehaven on the 4th and 5th, and 15° F. at Braemar on the 16th; (Ireland) 72° F. at Rathfriland (Dublin) on the 4th, and 20° F. at Markree Castle on the 17th. The outstanding feature of the weather of October was the general deficiency of precipitation. In south-east England it is generally the wettest month of the year, but it was the driest month this year, and was a record dry October in many places, Teignmouth for more than 60 years, Redruth 52 years, Cork 48 years, Hereford 37 years, and at Eastbourne for 35 years. Expressed as a percentage of the average for the period 1881-1915 the values were British Isles 49, England and Wales 32, Scotland 28 and Ireland 56. The month was also conspicuously sunny, the only large area with a deficiency being the north of Scotland. In most districts it was the first month since March in which aggregates exceeded the normal. Fog was reported on several occasions. Huddersfield had fog on 10 mornings, and Manchester on 14 mornings. *Aurora* was observed in Scotland on 12 nights, that on the 12th, the most widely observed, being reported as brilliant from Skye and Kirkwall. A comparatively rare

phenomenon a corona of 5° in diameter in cirrus cloud, was observed at Salt Island, Holyhead.

November.—A remarkable feature of the month was the abnormal prevalence of southerly winds. It was unusually mild and in most parts rather dull. On the 1st and 2nd the south and east of England lay within the influence of an anticyclone over the Continent. Brilliant weather was enjoyed over a wide area with sunshine records exceeding 8 hours in many places. By the 3rd unsettled conditions spread from the west and heavy rain, strong winds and gales were experienced over the southern half of the country. In the west the rainfall from the 2nd to 4th was abnormally heavy. Unsettled, mild and wet weather continued for several days. Southerly gales in the English Channel coincided with high tides on the 10th and 11th and much damage by flooding occurred along parts of the south coast of England. A short spell of sunny weather occurred on the 12th and 13th, but on the 14th heavy rain fell in Wales and the Isle of Man. At Douglas 62 mm. fell in 22 hours. On the 17th fog occurred in many parts of eastern England, especially in the Thames estuary. The 1st was generally sunny but the fine spell ended on the 2nd, when a deep secondary to a complex depression in the North Atlantic travelled north-eastwards across the country, causing strong winds and heavy rains in Ireland and western parts of Great Britain. Among the heavy falls being 71 mm. at Ballinacura, Co. Cork, 44 mm. at Glasgow and 41 mm. at Aberdeen on the 13rd. Serious floods occurred in parts of Scotland, in western Ireland and the Isle of Man. Pressure rose rapidly on the 15th, and widespread fog developed over most of England and southern Scotland. Monthly mean pressures were below normal in all parts of the British Isles, the deficiency ranging from 3.4 millibars at Yarmouth to 12.6 millibars at Malin Head. South-easterly to southerly winds were remarkably prevalent. Among the highest gusts recorded during the month were: 83 m.p.h. at Butt of Lewis on the 18th, 82 m.p.h. at Penderennis Castle on the 4th, 76 m.p.h. at Kirkwall on the 18th and 75 m.p.h. at Scilly on the 4th. The mean temperature of the month was above the normal in all parts. The warmest days were the 2nd to 4th. In many parts of England and Wales the night 3rd-4th was remarkably mild; at Ross-on-Wye and Kew Observatory the minimum temperature, 57° F., was the highest for November in records extending back more than 70 years and 60 years respectively. The extreme temperatures of the month were: (England and Wales) 64° F. at Llandudno on the 3rd and 23° F. at Rickmansworth on the 2nd; (Scotland) 61° F. at Banff and Gordon Castle on the 3rd, and 22° F. at Dalwhinnie on the 16th; (Ireland) 64° F. at Killarney on the 2nd and 25° F. at Killybegs on the 16th. An outstanding feature of the month was the pronounced excess of precipitation in most districts. Expressed as a percentage of the normal, the values were: British Isles 153, England and Wales 143, Scotland 143 and Ireland 122. It was the wettest November in Ireland as a whole since before 1881. In the north of Scotland it was locally the driest November on record, while in the south it was the wettest. At Rothesay it was the wettest November since at least 1800. In England and

Wales a deficiency occurred locally in the north-east, more generally in the east and also in the London area, elsewhere there was a decided excess especially in the west. On the 2nd and 3rd unusually heavy rain fell in the west, among the largest amounts being 244 mm at Treacastle (Brecon), 220 mm. at Patterdale (Lake District) and in the Black Mountains (Carmarthen), and 223 mm. at Borrowdale (Lake District). Serious flooding occurred at Derwentwater and Bassenthwaite, which are about 5 miles apart, were joined in one great lake. Sunshine aggregates exceeded the normal locally in the north of Scotland, the Midlands and in the south-west of England, the Channel Isles and most parts of Ireland, but were generally below elsewhere. Fog occurred fairly frequently in the north-east and Midlands of England and the estuary of the Clyde. *Aurora* was observed in Scotland on 7 occasions during the month.

December was characterised by high pressure and unusually mild and mainly dull weather with a marked deficiency of precipitation. During the first ten days cyclonic conditions prevailed with strong winds and gales between the 3rd and 5th, and unusually high temperatures for the time of year. Heavy rain occurred in Ireland and Scotland on the 2nd and extending to all districts on the 3rd. The mild conditions prevailed until the 12th, when a depression west of Iceland moved eastwards. In the rear of this depression, cold northerly winds brought a considerable drop in temperature and an anticyclone moved south from Iceland. This remained centred near the British Isles until the 22nd, giving cold weather in England with slight local rain and from the 27th-28th considerable fog, though the 27th and 28th were sunny in some districts. By the 23rd mild conditions had again become general. In Scotland the highest temperature of the month was recorded on the 24th, 60° F. recorded at Aberdeen, being the highest in December for at least 60 years. Heavy rain occurred in the west on the 23rd (77 mm. at Dungeon Ghyll and 69 mm. at Sawrey), but over Christmas the weather was mild and dry with some sun on most days. Thunderstorms occurred in north-west England on the 28th. On the 29th cold northerly winds swept across the country and snowstorms were reported from Scotland, north-east England and the Midlands, and slight snow and sleet from elsewhere in the British Isles. On the 30th and 31st snow still lay thick in the north and it remained cold in the south, but on the evening of the 31st mild conditions were spreading from the west. Monthly mean pressures were decidedly above the normal, the excess ranging from 8.2 millibars at Lerwick to 15.7 millibars at Scilly (St. Mary's). Westerly winds predominated. Strong winds or gales occurred widely from the 26th-29th. Among the highest gusts recorded were 87 m.p.h. at Lerwick on the 23rd, 80 m.p.h. at Kirkwall on the 27th and 28th; 77 m.p.h. at Liverpool (Bidston) on the 4th. Monthly means of temperature were above normal in all districts and several places recorded the highest temperature ever recorded in December. At Kew Observatory (59° F.) it was the highest since at least 1871, Ross-on-Wye (50° F.) for over 70 years, and at Cambridge (60° F.) since at least 1876. Ground frost was most severe on the mornings of the 5th-8th, 17th-20th and 28th-31st. The extreme temperatures

of the month were: (England and Wales) 61° F. at Perdiswell (Worcester) and Margate on the 4th, 15° F. at Rickmansworth on the 19th and at Appleby on the 31st; (Scotland) 60° F. at Aberdeen, Banff, Craibstone and Gordon Castle on the 24th, and 16° F. at Dalwhinnie on the 31st; (Ireland) 60° F. at Killybegs on the 3rd and 24° F. at Kilkenny on the 31st. There was a marked deficiency of precipitation in almost all parts of the country. The values expressed as a percentage of the normal for the period 1881-1915 were British Isles 57, England and Wales 45, Scotland 31 and Ireland 66. At Marchmont, with the exception of December 1926, it was the driest December since 1808. The heaviest daily falls were 82 mm. at Killochquich and 60 mm. at Glenbranter on the 2nd. Snow and hail occurred in the north between the 25th and 30th and widely on the 29th. Snow lay to a depth of 6 inches at Balmoral on the 30th and 7 inches at Achnashellach on the 31st. Sunshine was, with very few exceptions, below the normal. No sunshine was recorded at Greenwich and Westminster from the 11th-26th inclusive. Fog occurred in many places on the 1st and 2nd; in London and the south-east on the 18th and more widely on the 19th, and 20th. *Aurora* was observed in Scotland on 9 occasions during the month.

THE YEAR 1931.—The year was chiefly remarkable for the excessive wetness and dullness of the summer months April to September inclusive. The summer was more conspicuous for spells of cold weather than for warmth, there being an absence of any really hot weather. *January* was cold and foggy during the first fortnight, and during the second half was wet and windy. There were, however, considerable bright periods. The chief features of the weather of *February* were the squally westerly or north-westerly winds and frequent wintry precipitation. Sunshine aggregates were in general deficient. *March* was on the whole cold and quiet and, except in south-east Ireland and south-west England, dry and sunny. *April* was unsettled and dull and very wet in England and Wales. Apart from a spell of moderately warm weather from about the 8th-24th day maximum temperatures were mostly below normal. Unsettled, wet and cloudy weather prevailed throughout most of *May*. The days were mostly cool but the nights frequently mild. The first three weeks of *June* were on the whole dull and wet, followed by fine weather generally during the last week. *July* was wet and dull with widespread thunderstorms. There were no really hot days, but night temperatures were frequently above normal. *August* was wet, cool and dull in England and Wales, but sunny and dry in the west and north. *September*, apart from warm days at the beginning and middle of the month, was mostly cold and dull. Abnormally heavy rain fell during the first four days, but thereafter precipitation was unimportant. *October* was dry and sunny; mild conditions prevailed generally during the first half of the month, but the last ten days were cold, and at most places there was severe frost at night. *November* was very mild and wet, and in most places rather dull with an abnormal prevalence of southerly winds. *December* was characterised by high pressure and unusually mild, dry and dull weather. Annual pressure means were about or only slightly below the normal. The temperature means for the year differed only slightly from

the normal in most places. The extreme temperatures of the year were: (England and Wales) 82° F. at Bromley (Kent) on June 14th and 5° F. at Rickmansworth on March 10th; (Scotland) 81° F. at Onih and Ardnornish on August 4th and at Glenbranter on August 5th, and 1° F. at Braemar on March 3rd; (Ireland) 79° F. at Markree Castle on August 4th and 18° F. at Hazelhatch (Dublin) on March 10th. The year 1931 continued the remarkable run of wet years which set in about 1922. The general precipitation of the British Isles for 1931 expressed as a percentage of the average for the period 1881-1925 was 107. England and Wales 108, Scotland 104, and Ireland 109. The accumulated excess over the British Isles during the last ten years has amounted to 97 per cent. Among the outstanding daily falls were 106 mm. at Cardiff on May 27th, and 126 mm. at Kildale Hall (Yorks) on September 3rd. Perhaps the most striking rains of the year were those of November 2nd and 3rd, which were not only widespread but gave as much as 220 mm. at Patterdale in the English Lake District and 244 mm. at Blaenau-hydyr, to the north of the Black Mountains. The general deficiency of sunshine during the summer months was sufficiently marked to affect the annual aggregates which in all districts were below the normal. *Aurora* was observed in Scotland during each month with the exception of May and June.

1932.—*January* was very mild, sunny in northern England and eastern Scotland, and very wet in the west and north of Scotland. The month opened with a change to very mild conditions, the rise in temperature in many parts of England amounting to 25 degrees. The mild and damp south-westerly winds that were established so suddenly throughout the British Isles proved persistent, and blew very strongly at times in the north-west. The mild weather was interrupted temporarily by polar winds from between north and west on the 7th and 8th, and eventually gave way about the 20th to lighter winds, which over England were of Continental origin. Pressure slightly exceeded 1,020 millibars (21 inches), over a part of England on the 26th, this being for many places in the Midlands the highest reading recorded for at least 50 years. The anticyclonic spell made the second half of the month comparatively dry, and there was practically no rain over a large proportion of England during this period. Temperature now became comparatively low, and frequent night frosts occurred over England and Scotland. Gales occurred widely on several days between the 5th and 14th. Among the highest gusts recorded were 35 m.p.h. at Bell Rock on the 13th, 32 m.p.h. at Scilly on the 6th, 30 m.p.h. at Lerwick on the 13th, and 32 m.p.h. at Pendennis Castle on the 6th. Monthly means of temperature were everywhere above normal. The extreme temperatures for the month were: (England and Wales) 60° F. at Colwyn Bay on the 2nd and at Llandudno and Wakefield on the 18th, and 1° F. at Rickmansworth on the 1st; (Scotland) 61° F. at Gordon Castle on the 18th and 17° F. at Eukdalemuir on the 26th; (Ireland) 60° F. at Killarney on the 3rd and Newcastle (Wicklow) on the 18th, and 24° F. at Kilkenny on the 1st. The general precipitation of the British Isles expressed as a percentage of the normal for the period 1881-1925 was 123 per cent. The rainfall was very unevenly distributed, for while at Glenquoich the total was 807 mm.,

Glenbranter 476 mm. and Achnashellach 431 mm., at Tynemouth and Felixstowe only 15 mm. were recorded. The excess of sunshine (about 60 per cent.) in the east of Scotland and north-east of England in a month when rain was so heavy at no great distance to the west is noteworthy, and may be attributed partly to the fact that there was an almost complete absence of winds from the North Sea such as so often bring clouds, formed by turbulence. Fog was rather frequent over England except in the south-west, mostly during the quiet dry period late in the month. *Aurora* was seen in parts of Scotland on the nights of 6th, 7th, 11th and 25th. Thunder and lightning occurred rather often during the unsettled windy period. The solar or lunar halo was unusually frequent; it was observed on ten occasions between the 5th and 26th at Oxford.

February.—The outstanding feature of the weather of the month was the remarkable deficiency of rainfall in all districts associated with abnormally high pressure and persistent winds from a northerly or easterly point. During the first few days of the month the anticyclone which had set in on the 20th January was situated to the west of Ireland. By the 9th the high pressure area lay to the north and during the next few days cold north-easterly to easterly winds prevailed generally. Snow was widespread from the 10th to 12th but the amounts were small. There were frequent sunny periods from the 14th to 24th. The days became less cold and temperatures of round about 50° F. were recorded at many places. By the 28th easterly winds had again become established over southern districts and were accompanied by a considerable drop in temperature; at Boscombe Down the maximum on the 29th was 33° F. Monthly pressure means were from 25 to 25 millibars above normal. At Southport the mean was the highest recorded in any month for at least 60 years, and at Glasgow for at least 65 years. No centre of low pressure crossed the country during the month. Northerly to easterly winds were unusually persistent, and with few exceptions there was a notable absence of strong winds. Gales occurred only on the 10th-11th and 28th-29th. The month was cold in the south of England and Ireland but in Scotland the temperature was high for the time of year. The warmest days were around the 3rd and the 22nd. Ground frost occurred frequently during the month. The extreme temperatures of the month were: (England and Wales) 54° F. at Harrogate on the 3rd and 15° F. at Rickmansworth on the 9th and 19th, (Scotland) 58° F. at Grief and Perth on the 3rd and 15° F. at Dalwhinnie on the 11th; (Ireland) 52° F. at Armagh and Roches Point on the 3rd and at Mallarany on the 20th, and 18° F. at Markree Castle on the 19th. The precipitation of the month expressed as a percentage of the average for the period 1881-1925 was: England and Wales 18, Scotland 12, Ireland 7, British Isles 14. The figures for Scotland and Ireland are the lowest recorded for over half a century. At the end of the month the drought still continued, many places having had no appreciable rain since the middle of January. Sunshine totals were generally below the normal except in parts of Scotland, Wales and the west of Ireland. Some good daily records were obtained, among the largest being 9½ hours at Hastings and 9½ hours at Brighton on the 18th. Fog occurred

frequently, except in the south-west, during the first three weeks. The fog was thick locally on the 4th, 8th and between the 15th and 18th. *Aurora* was observed locally in Scotland on the nights of the 3rd, 4th, 8th, 11th and 12th.

March.—The drought which formed so remarkable a feature of the weather of February continued with cool easterly winds and bright periods during the opening days of March. In Scotland the drought was broken on the 4th or 5th, but it was not until the 8th that the drought was really broken in the south. At some places 20 mm. or more was recorded on this day. Subsequently an anticyclone spread south-east from Iceland, bringing a renewal of dry and mainly cool weather which lasted until the 20th. During this period daily records of 20 hours or more sunshine was recorded in places. The 20th marked a change to unsettled rainy weather which, except for fine to fair weather in England on the 24th and 25th, continued until the end of the month. The 27th (Easter Sunday) was wet, and the 28th (Easter Monday) was showery with sunny periods. On the 31st cold northerly winds spread across the northern and western districts with local snow and hail in the north and thunderstorms in the south. Monthly pressure means were again above the normal. Strong winds or gales were reported from western districts about the 6th, 25th and 31st. Otherwise the month was quiet. Mean temperatures were generally below normal, due mainly to the frequent cold nights, in England and Wales, but in Scotland and most parts of Ireland they exceeded the normal. The extreme temperatures for the month were: (England and Wales) 59° F. at Tavistock on the 16th, Cambridge on the 19th, and Greenwich Observatory on the 31st, 12° F. at Rickmansworth on the 13th, (Scotland) 60° F. at Altrincham on the 13th, 11° F. at Dalwhinnie on the 12th; (Ireland) 59° F. at Kilkenny on the 23rd and 26th, and at Hazelhatch (Co. Dublin) on the 27th, 20° F. at Phoenix Park (Dublin) on the 27th. Precipitation over the British Isles as a whole was below the normal. In most places the rainfall during the last ten days accounted for the greater part of the month's total. In England and Wales there were considerable variations, but in general there was a deficiency except in the north-east. In Scotland it exceeded the normal in the north and east and locally elsewhere, while in most parts of Ireland there was a considerable deficiency. In the south of England and Wales and most of Ireland, sunshine aggregates were above the normal, but elsewhere the month was, on the whole, dull. Fog was widespread on the 3rd, and was dense locally in the Clyde area on the 4th. It occurred in the south-east on the 13th to 15th, and on the 19th. In the south on the 24th it was thick locally. Coastal fog occurred on the 21st. *Aurora* was observed in Scotland on nine occasions, while on five occasions it was seen as far south as Dumfriesshire. Halo phenomena was observed over a wide area in the Midlands and Southern England on the 25th.

April.—Unsettled wet weather with cool days and in most places less than the normal sunshine prevailed during the month. Depressions off north-east England on the 1st and over southern England on the 3rd and 4th caused cold northerly to north-easterly winds and wintry precipitation. Severe ground frost occurred in Scotland on the 3rd amongst low grass minima recorded were 9° F. at Dalwhinnie

and 16° F. at Renfrew. In southern England the 5th was dry and sunny with sunshine records exceeding 20 hours in places. Very unsettled conditions prevailed widely from the 6th to 12th. The 12th was a brilliantly fine day but weather deteriorated again in the west and north on the 13th at the approach of a fresh Atlantic disturbance. A change occurred about the 16th with pressure high to the north and north-west and low over the Continent. Bright, sunny weather was enjoyed in Scotland and Ireland, but mainly dull, rainy conditions were experienced in England. Unsettled weather was renewed on the 18th in the north and later throughout the country. During the next few days showery weather with local thunder and hail prevailed. Snow fell in Yorkshire on the 26th. Conditions then became much milder and although rain fell at times there were bright intervals. Mean pressures for the month were well below the normal. Westerly winds predominated with less than the normal seasonal frequency of easterly winds. Strong winds or gales were experienced widely between the 7th and 12th, and in a gust 79 m.p.h. was recorded at Dunfanaghy (Donegal) on the 7th. Mean temperatures were generally from 1° F. to 3° F. below the normal. In many places it was the coldest April since 1922. The extreme temperatures of the month were: (England and Wales) 66° F. at London (Camden Square), Rickmansworth, and Canterbury on the 30th, and 23° F. at Castleton on the 3rd and at Rickmansworth on the 25th, (Scotland) 60° F. at Onich on the 30th, and 19° F. at Dalwhinnie on the 17th; (Ireland) 62° F. at Newcastle on the 9th, and 26° F. at Dublin (Glasnevin and Phoenix Park) on the 3rd. Precipitation occurred frequently during the month, but daily amounts exceeding 1 inch were rare. In almost all districts there was a pronounced excess of precipitation, monthly totals exceeding twice the normal locally in England and Scotland and over a large area in Wales. Expressed as a percentage of the normal for the period 1881-1925 the values were—British Isles 149, England and Wales 155, Scotland 150, and Ireland 118. The unsettled wet conditions which prevailed during the month resulted in a marked deficiency of sunshine in most districts. In southern Scotland, however, there was an excess. Little fog was reported during the month. Dense fog occurred in the Firth of Forth on the 29th. *Aurora* was observed in northern districts in Scotland on each night from the 1st to 4th and on the 6th, 7th, 12th and 21st. Halo phenomena observed at Armagh Observatory on the 27th included the halo of 22° with parhelia and part of the mock sun ring, the halo of 46° and traces of the upper arc of contact to the 46° halo which was described as very brilliant at the point of contact.

May.—The most remarkable features of the weather of the month were the pronounced excess of rainfall in England and Wales and the destructive floods in the Midlands and Yorkshire. During the first three days rain occurred in most parts of England and Wales, associated with thunderstorms in the Midlands and south-east on the 1st. As a result of these, many roads in Wiltshire, Shropshire and Worcestershire were flooded. By the 3rd, cold northerly winds had set in over the country generally. Winds were strong locally about the 6th, whilst wintry showers occurred in northern districts. A complete change of weather occurred about the

12th. A deep depression lay over the Atlantic; southerly winds spread over the country and temperature rose considerably. There was heavy local rain on the 12th, 13th and 15th, but many sunny periods notably on the 14th and 17th (15½ hours at Tiree on the 17th). On the 18th another depression approached from the Atlantic and there ensued the warmest spell of the month, temperature rising to 70° F. and over during the period 19th to 21st. A depression which moved from the English Channel to off the north-east coast of England on the 21st to 22nd caused unusually heavy rain and widespread destructive floods in western districts, the Midlands and Yorkshire. After the 21st followed a period of northerly winds and cool weather; at Kew the maximum temperature fell from 74° F. on the 20th to 53° F. on the 25th. On the 26th another depression approached from the Atlantic, temperature rose and heavy rain occurred in the south-west of Ireland, but in Scotland the 30th and 31st and in eastern England the 31st were sunny. Monthly mean pressures at 7 h. were everywhere below normal, the deficiency being slight in the extreme north and amounting to about 5 millibars in the east of England. Winds were mainly light to moderate. There was a considerable frequency of northerly winds in northern districts. Apart from brief warm spells about the 20th and towards the end of the month the days were mostly cool, markedly so from about the 4th to 6th. The nights, however, were often mild, so that mean temperatures were not very much below normal. The extreme temperatures for the month were: (England and Wales) 77° F. at London (Regent's Park) on the 20th, 24° F. at Cantref (Brecknock) on the 23rd; (Scotland) 73° F. at Ardmorish on the 31st, 23° F. at Braemar on the 8th, (Ireland) 68° F. at Killarney on the 21st, 27° F. at Markree Castle on the 8th. The general precipitation over the British Isles, expressed as a percentage of the normal for the period 1881-1915, was 174; the values for the constituent countries were: England and Wales 222, Scotland 108, Ireland 134. Generalised rainfall values for England and Wales for earlier years back to 1727 have been computed recently, and although the values for the earliest years are naturally less reliable, one may fairly conclude that May 1932 ranks as the wettest May over England and Wales as a whole for the past 160 years. In striking contrast to the general marked excess of rainfall, a pronounced deficiency was recorded in the west of Scotland, Orkney and the Shetlands. With the exception of Orkney, southern Hebrides and the north-west of Ireland, sunshine aggregates were well below the normal. In parts of England the month was the dullest May on record, e.g., at Kew Observatory, where records extend back to 1880. Coastal fog was reported during the period 16th-20th. *Aurora* was observed locally in northern districts in Scotland on the 2nd, 4th, 5th and 8th. Ball lightning was observed during a thunderstorm at Upper Heyford on the 1st.

June.—The outstanding feature of the month was its pronounced dryness, the general precipitation over the British Isles being only slightly more than half the June normal. The month was sunny in the west, but, except locally in the south of Ireland, was not remarkable for any great warmth. The month opened generally sunny, but heavy rain occurred locally on the 3rd. The 4th was cool, but an anticyclone over Iceland moved south and then eastwards, and

temperature gradually rose; high day temperatures were recorded on the 12th in eastern England. Local thunderstorms occurred on the 20th and 21st. During the next week a spell of dry, sunny weather occurred. Temperatures were low on the 19th and 20th, but little rain fell. From the 21st most of the British Isles came under the influence of an anticyclone and temperatures rose. The fair spell broke in England on the 27th, when a secondary trough to a deep depression near the Faroes moved across the country; heavy rain and thunderstorms occurred locally on the 27th and 28th, while heavy rain fell in the south-west on the 29th and spread to all districts on the 30th. Monthly mean pressures were above the normal in all districts. Winds were mostly light, and were mainly from between north and east. Monthly mean temperatures were above the normal in the west, but slightly below in the east. The warmest days were about the 16th and 26th: 80° F. being recorded locally. The extreme temperatures for the month were (England and Wales) 82° F. at London (Camden Square) on the 27th, 30° F. at Rhayader on the 7th; (Scotland) 80° F. at Paisley, Renfrew and Ruthwell on the 17th, 27° F. at Dalwhinnie on the 6th; (Ireland) 80° F. at Kilkenny on the 18th, and Killarney on the 17th and 19th, and 33° F. at Dublin (Phoenix Park) on the 5th. In contrast to the abnormal wetness of May, June was remarkable for its dryness. In many parts of the country the rainfall of the 30th June to 1st July accounted for the greater part of the month's rainfall. Among the heavy falls on the 30th were South Brent 3.70 inches, Holne 3.28 inches, and St Briavels, Glos., 3.20 inches. The general precipitation over the British Isles, expressed as a percentage of the normal for the period 1881-1915, was 57. England and Wales 59, Scotland 49, Ireland 50. Sunshine aggregates exceeded the normal in western districts, and were deficient in most parts of north-eastern Scotland and eastern England. Fog occurred in coastal districts and in eastern districts of Great Britain during the first three days, about the 13th and on the 24th. *Parhelia* and an upper arc of contact to the halo of 22° were observed at Oxford on the 25th.

July was dull and wet with widespread thunderstorms. The cloudy and unsettled weather of this month was in strong contrast with that of June. During the first ten days conditions were influenced by depressions between Scotland and Ireland, but in the south-east of England the falls of rain were generally small, and many sunny days were enjoyed along the South Coast. After the 10th unsettled weather and northerly winds predominated for a week, winds tended to be more north-westerly after the 18th, and after the 24th more often from west or south-west. Depressions were centred over or near Scotland from the 24th to the end of the month. No large area of fine weather developed at any time during the month, although little or no rain fell over England from the 8th to the 20th; there was no day on which some part of the country was not having wet weather. Monthly pressure means were everywhere below the normal, the strongest winds were generally felt on the first few days; on the 9th, 17th, 18th, and 26th to 29th. Gale force was reached for a few hours on the 1st at Butt of Lewis and Bell Rock (Forfar), and gusts of 50 m.p.h. or more were registered in many parts of England, Scotland

and Ireland on that day. Monthly temperature means were, in general, slightly above the normal. The warmest spell occurred generally between the 9th and 12th, while the coolest was between the 18th and 23rd. The extremes for the month were: (England and Wales) 85° F. at Pontefract and Attenborough on the 10th, and London on the 20th and 21st; 34° F. at Rickmansworth on the 26th; (Scotland) 83° F. at Aberdeen on the 10th; 34° F. at Dalwhinnie on the 23rd; (Ireland) 82° F. at Newcastle (Wicklow) on the 6th; 41° F. at Hazelhatch on the 18th. The total rainfall for the month was very variable owing to the exceptionally heavy falls that occurred in some of the numerous thunderstorms, but there was enough windy cyclonic weather for the wet climates of elevated places in the west and north to be apparent, a number of such places in Scotland having 250 mm. or more. Among the heaviest daily falls were 130.5 mm. at Cranwell on the 11th, 102 mm. at Stalybridge (most of which fell in a thunderstorm between 16h. and 20h. on the 11th, and 34 mm. in 40 minutes at Shinfield on the same day. The general precipitation of the British Isles expressed as a percentage of the average for the period 1881-1925 was 137; the values for the constituent countries were: England and Wales 144, Scotland 122; and Ireland 138. With the exception of the extreme north of Scotland there was a general pronounced deficiency of sunshine. The solar halo was observed frequently, at Oxford on no fewer than 13 days. A small tornado left a track of fallen trees in its wake near Wych Cross, Ashdown Forest, on the afternoon of the 26th.

August—The outstanding feature of the weather of the month was the excessive heat over a large part of England. The month opened with rather unsettled cool weather and local thunderstorms. About the 4th an anticyclone off our south-west coasts began to spread north-east. Much fog was experienced from the 4th to 10th. The warm spell culminated in a very hot day on the 11th. Severe thunderstorms occurred on the 12th. For a few days shallow depressions lay over the country. On the 14th an anticyclone developed over Northern Scotland and moved south, bringing temporarily cooler, north-easterly winds and mainly cloudier skies. Subsequently westerly winds prevailed in the north and another spell of anticyclonic conditions in the south. Temperature rose considerably and the 19th was the warmest day on record in some places. Again the warm weather was ended by thunderstorms, on the 20th, though they were delayed in south-east England until the night of the 20th to 21st. A sudden drop in temperature occurred in the Midlands, and a more gradual one in south-east England. At Birmingham the maximum on the 20th was 66° F., as against 92° F. on the 19th. There followed a few days of anticyclonic weather, but it remained cool. Towards the end of the month shallow depressions moving east brought unsettled weather with local rain and thunderstorms. Monthly pressure means were everywhere above the normal, the excess ranging from 6.4 m.b. at Malin Head to 3.0 m.b. at Rothes Point. Winds were variable and light to moderate in force. A gale occurred at Dunfanaghy on the 6th. Mean temperature for the month was everywhere above the normal and notably so in south and east England and the Midlands. In many parts of Southern

England and the Midlands temperature exceeded 90° F. on the 19th, and at the following places the figure for that day is the highest registered since records began:—Camden Square (92° F.) for 74 years, Halstead (97° F.) in 40 years, Norwich (96° F.) in 50 years, and Oxford (95° F.) in 35 years. It is extremely rare for temperature to remain above 70° F. throughout the night, but at Lymington it did not fall below 73° F., between 18 h. on the 19th and 7 h. on the 20th. The extreme temperatures for the month registered in standard screens were:—(England and Wales) 97° F. at Halstead, Camden Square, Regent's Park, Enfield and Tottenham on the 19th; 32° F. at Castleton on the 24th. (Scotland) 82° F. at Kelso (Broomlands) and Marchmont on the 19th, 28° F. at Balmoral on the 23rd. (Ireland) 80° F. at Killarney on the 19th, 36° F. at Armagh on the 25th. In spite of the rainfall deficiency over the country as a whole, there were large variations owing to the severe local thunderstorms. For example, while less than 20 per cent. fell in parts of Kent and Carmarthen, there was 186 per cent. at Crawley Mill, Woburn, 121 per cent. at Wellington College, 122 per cent. at Seaford and 126 per cent. at Douglas, Isle of Man. In the Edinburgh district it was the driest August since at least 1785. Sunshine was above the normal in south-east England and nearly normal in the extreme north of Scotland and in eastern England. Elsewhere it was deficient, markedly so in Ireland. Solar halo was observed at Oxford on no fewer than 13 days.

September—In contrast with that of August, the weather of this month was mainly wet and very dull in southern and eastern England. During the first twelve days conditions were generally unsettled. Heavy rain fell at times and the wind was mainly from between south and west-north-west, but with the subsequent movement of the Azores anticyclone in a north-easterly direction, the best weather of the month occurred from the 14th to 17th inclusive. Temperature rose to 75° F. and above at many places. Local rainstorms occurred in the south-east late on the 18th, and thereafter depressions developing near Iceland moved in an east-south-easterly direction. Cool, unsettled weather prevailed generally, but a wedge of high pressure gave a beautiful day at most places on the 21st. About the 27th, sharp ground frosts occurred, especially in northern districts, on the 28th. A depression over the Bay of Biscay, moving northward, caused a renewal of unsettled weather, with rain in the south on the 29th, and more general rain later. Monthly pressure means were everywhere below the normal, while winds from between south and west-north-west prevailed generally during the first half of the month. From the 18th, cold winds from some northerly point frequently prevailed. Gales occurred locally on the 8th, 11th, 18th, and from the 25th to 26th. Mean temperature on the whole differed little from the normal. There were two warm spells during the month, the first about the end and the other from the 14th to 17th. The extreme temperatures for the month were:—(England and Wales), 82° F. at Birmingham (Sparkhill) on the 15th, 28° F. at Houghall on the 21st. (Scotland), 76° F. at Craibstone and Balmakewan on the 15th; 25° F. at Linlithgow on the 28th. (Ireland), 76° F. at Waterford on the 13th; 29° F. at Markree Castle on the 21st and 22nd. The general precipitation over the British Isles as a whole

expressed as a percentage was 135; the corresponding values for the constituent countries were:—England and Wales 144, Scotland 137, Ireland 109. There were a few isolated areas where there was a deficit; at Waterford, for example, the fall was only 59 per cent. of the normal. Among the heaviest daily falls were:—72 mm. at Tynysaun and Stonyhurst on the 2nd, and 70 mm. at Borrowdale on the 1st. The fall

at Stonyhurst is the largest daily rainfall there in September for the last 84 years. Sunshine was deficient in all districts except north-east England and east Scotland. At Eastbourne the total of 123 hours was the lowest recorded in September between 1887 and 1932. Aurora was observed on six occasions during the month, while the solar halo was observed at Oxford on 20 days.

STORMS AND FLOODS IN 1931-32.

(1931) *October 3*.—Three inches of rain fell in Funchal, and floods to a depth of 4 feet occurred in the low-lying streets. 10. After torrential rain at Mons the streets were found to be full of frogs. 12. A typhoon swept along the Pacific coast of Japan. 21. Basements and lower storeys of houses fronting the Neva at Leningrad were flooded when the river level rose suddenly owing to a cyclone over the Baltic.

November 5.—Four lives were lost and much damage caused by floods in the counties of Hordaland, Sogau and Fjordane, Norway, owing to the heavy rains. 6. A hurricane struck the oil-producing town of Maracaibo, Venezuela.

December 10.—Three persons were drowned, and half the wheat crop of Queensland was destroyed by floods in the south of the State. The suburbs of Brisbane were flooded. 13. A gale and snowstorm over the whole of Tuscany put the wireless station at Florence out of action and unroofed many houses. 14. After three days' continuous rain the Maritza overflowed and interrupted railway communication between Bulgaria and Turkey. Severe seasonal storms off the Barbary coast caused a great deal of damage to the port and shipping at Algiers. Constantine and the surrounding country was covered with snow. 25. Snow fell in Bethlechem. 28. Rain fell at Florence after the thermometer had gone down to 10° F. On reaching the ground it froze immediately. 29. Snow fell in Switzerland down to a level of 3,000 feet, breaking the drought which had prevailed throughout December. Two Dutch aeroplanes were forced down by a snowstorm at Mont Logan, near Senlis. 30. A tornado swept across the cotton lands of Southern Mississippi wrecking houses and farm buildings. Five persons were killed and more than 50 injured.

(1932) *January 2*.—Heavy south-east gales swept the Cape, with torrential rain. Much flooding occurred and damage to flocks and crops was enormous. 7. Heavy rain caused a rise of the Meuse. The rivers Sambre and Semois were also in flood. 11. During a storm at Bilbao the bell tower of the Convent of Carmelite Nuns fell down. One of the nuns was killed and three others injured. 12. The French schooner *Rubis*, of Dakar, was driven ashore in a southerly gale off Europa Point, Gibraltar. 13. Eleven persons were killed and over 100 injured in a tornado which swept the Alabama-Mississippi border. 16. Thirty thousand people were rendered homeless by great floods in Northern Mississippi. Three major breaks occurred in the embankment north of Swan Lake. A 10-foot deep torrent swept down on the sleeping families. The floods extended for a distance of 200 miles and covered six counties. 17. Twenty thousand Zuni and Navajo Indians were cut off from civilisation in western New

Mexico by one of the heaviest snowstorms ever known in that part of the country.

February 1.—The Cape to London air mail was forced down by a heavy rainstorm about 40 miles south of Broken Hill, Northern Rhodesia. 12. A man was frozen to death at Morris, Manitoba, during a severe blizzard which swept the Prairie Provinces. The temperature touched 32° F below zero. 20. Heavy snowstorms in the north of Greece interfered considerably with air routes from and into the Balkans.

March 7.—Gales, snowstorms, and bitter cold caused the deaths of 36 persons along the Atlantic seaboard of New York. Much damage was done to shipping. 21. A cyclone swept over Alabama. The township of Northport was in ruins. The number of deaths in Alabama was 246, and damage estimated at \$2,000,000. The cyclone spread over five southern States. 22. Extensive floods occurred in Adygelsk Autonomous Area, the Kuban Basin and other regions of the Northern Caucasus. More than 20,000 collective farms were flooded. 29. Nine persons were killed and 50 injured in a second series of storms which broke over Alabama and Western Georgia.

April 5.—Much damage was caused by floods in Rumania. In Northern Moldavia thousands of acres of farm land were under water. "Mud-rain" fell at Florence, Genoa and elsewhere in Italy, which left slight traces of solid black material on the ground. 21. Southern Alberta was covered with about a foot of belated snow. Heavy rain fell in Edmonton when the rainfall was already over the average for April. 25. Seven persons were killed in Tennessee by a tornado, which also swept over Arkansas and Alabama. 26. A tornado devastated the village of Majhirkati, 7 miles from Khulna, Bengal. 30. In a typhoon over the Philippines 20 persons were killed.

May 10.—As a result of a severe storm which swept over Chambéry some hundreds of tons of earth were undermined and moved slowly down the valley. 9. A tornado struck the Mymensingh gaol, Bengal, and almost completely demolished the walls and buildings. 16. A woman and her four children lost their lives as a result of violent storms which broke over the Rhineland. The village of Guls was flooded to a depth of from 6 to 10 feet. 20. A heavy monsoon rain broke over Burma. 27. Eleven persons were killed and much damage done by a cyclone moving round a belt over 60 miles wide.

June 2.—Eighty persons were killed and 80 injured in a hurricane which struck the town of Ismail. Many buildings collapsed. 3. A hailstorm over the Jura region partly destroyed vineyards along Lake Neuchâtel. A cloudburst

over Oppenheim, on the Rhine. Torrents of water rushed down the hills and wrought havoc with the vineyards, making holes in the ground from 12 to 15 feet wide and 10 feet deep. 11. A storm of great severity passed over Jubbulpore and several people were killed by lightning. 25. Some 30 persons were drowned and much damage done to property and crops by floods which followed torrential rain and hail in Moldavia and Bukovina. 28. Violent storms in the mountainous regions of Portugal destroyed many crops and vineyards. Three persons were killed by lightning.

July 2.—Nine passengers were killed and 15 injured in a train collision near Prague during a severe thunderstorm. 3. Torrential rains at the close of the rainy season caused widespread floods in western and southern Japan. 4. During a tornado, the principle buildings of Washington (Kansas), were demolished. 6. The town and district of Fussen in Upper Bavaria, experienced the most destructive hailstorm recorded in Bavaria during the last 60 years. 17. As a result of a cloudburst between Florence and Leghorn, long stretches of railway line were washed away. 30. Canton was flooded after very heavy rain and 300 lives were lost.

August 13.—A cloudburst occurred in the

Bavarian Alps. During a 75 m.p.h. hurricane which swept the Gulf coast, 13 persons were killed. 14. Three men were killed by lightning and 7 were drowned during a thunderstorm in the Rhineland. 30. Twelve thousand acres of rich dairy land were flooded in the Wairarapa and Manawatu districts in the North Island of New Zealand. 31. A violent thunderstorm burst over Toulouse and much flooding occurred.

September 6.—Several hundred families were left homeless by floods caused by the overflowing of the Rio Grande River. 7. Fourteen persons were killed and between 60 and 70 injured in a hurricane which hit North Abaco Island in the Bahamas. 9. A storm of unusual violence broke over Marseilles and severe flooding occurred. 17. A 50 m.p.h. gale swept down the Annapolis Valley leaving tremendous damage in its wake. 22. A violent storm swept over Southern Ticino. The village of Mollinaccio was flooded to a depth of 3 feet. 26. A hurricane swept over Puerto Rico. Two hundred persons were killed and 1,000 injured. The damage was estimated at \$20,000,000. 28. Thunderstorms and heavy rains did much damage along the coast from Frejus to Nice. 29. While a hurricane passed to the south of Jamaica, a storm on the north side destroyed more than 100,000 banana trees.

BETTER TRADE RETURNS.

LARGER EXPORTS OF MANUFACTURES.

The returns of overseas trade in October are more encouraging. Compared with September, exports increased by £4,211,000, or 16 per cent. and the greater part of this increase took place in manufactured articles, exports of iron and steel, machinery, chemicals drugs, dyes, &c., and vehicles (including locomotives and ships) all being higher. Re-exports also advanced, while of an increase of £6,551,000 or (12 per cent.) in imports, only £1,360,000 was in the form of manufactured goods.

For the month of October, 1932, the apparent adverse balance of trade was £26,695,000, against £25,136,000 in September and as much as £42,577,000 in October, 1931, while for the first 10 months of the year 1932 the unfavourable balance is £263,749,000, compared with £323,237,000 in the corresponding period of 1931.

Compared with October, 1931 (in which there was one more working day), imports in October, 1932, show a reduction of 24.6 per cent., exports of 7.2 per cent., and re-exports of 30 per cent. For the 10 months ended October, 1932, imports were reduced by £120,974,750 (or 17.2 per cent.) to £581,077,083, exports by £23,675,328 (or 7.2 per cent.) to £301,547,625, and re-exports by £20,811,402 (or 20.1 per cent.) to £24,720,686.

MORE PASSENGERS BY ROAD.

WORK OF TRAFFIC COMMISSIONERS.

The first annual reports of the Traffic Commissioners for each of the 13 areas in Great Britain review the work done during the year ended March 31, 1932.

APPEALS.

The appeals made against the Commissioners' decisions on applications for road service licences and backings totalled 1,309. Of those 149 reversed or modified the decisions, no order was made in 249, 255 were withdrawn, and 665 are awaiting decision.

STATISTICS.

On March 31, 1932, there were 47,870 public service vehicles in operation, but at the end of that year the number had fallen to 46,230. Passengers increased, however, from 1,208,508,598 for the first quarter to 1,305,633,718 in the last quarter, the total for the year being 5,265,524,930. The daily average number of passengers was 14,400,000. The receipts totalled £58,323,653.

The vehicle miles run aggregated 1,318,774,645. The operators of these vehicles numbered 6,424. Of this total 2,760 owned only one vehicle each. One company owned 4,841 vehicles.

Bissextile.—When Julius Cæsar reformed the Roman Calendar in the year 46 B.C., 365½ days was adopted as the mean length of the year, that being the value then current in Egypt. Three out of four years were given 365 days, and the fourth, 366 days, the sixth day before the Kalends of March being repeated. The intercalary day came to be called *ante diem bis sextum Kalendas Martias*, or more briefly *bissextum*, whence our word bissextile for leap-year.

Before the introduction of this calendar the Roman year consisted of 355 days, with a month of 23 days intercalated after February 23 when necessary. This intercalation had, however, been sometimes omitted, and it was found necessary to make the year 46 B.C. consist of 445 days. This year is called the Year of Confusion.

WEATHER RECORD OF THE HARVEST AND HOLIDAY MONTHS DURING
THE YEARS 1927-1932.

For Fifty-one years, 1876-1926, see "WHITAKER'S" for 1927 (pp 855-860).

1927.—June.—The opening week was fine. The following one was cold. After this the weather became wet as well as cold and the concluding week was dismal, rainy and sunless.

July.—The same type of most unsettled weather continued. There were many rainy days, but occasionally there were sunny intervals.

August.—The first day of the month (Bank Holiday) was wet from start to finish. Two or three rather fine days followed and then persistent rain set in again, on Saturday, the 26th, it fell in torrents. During the week following the weather continued most unsettled, but on the 27th there was a change for the better and the last few days of the month were fine.

September.—There was no rain during the first nine days of the month. The tenth day was cold and wet. The two following days were dry but not warm. On the 13th and 14th wet weather set in for good till the end of the month, first with the wind in a northerly quarter; it shifted afterwards to the west and south-west.

1928.—June.—During the first three weeks the weather was variable; it was never very warm and often cold and showery. The last week was bright and sunshiny.

July.—Early in the month a period of great heat, often very oppressive, set in. The weather during the last few days was unsettled.

August.—The opening days of the month were marked by the occurrence of heavy rains. The middle of the month was mainly fine and warm. There was more rain again in the fourth week, and at quite the end of the month it was unsettled. The total rainfall varied in different districts; at Greenwich it nearly equalled that of August 1927, when the general character of the weather was much worse.

September.—Very fine, warm and sometimes hot during the first three weeks. About the 23rd a cold period set in. The rainfall was very small.

1929.—June.—Showery during the first part of the month; afterwards dry. Cool on the whole; occasionally a few hot days, last day (30th) very cold.

July.—Unsettled at first. About the 9th a spell of very hot weather set in; this lasted to nearly the end of the month. Closing days very unsettled.

August.—A good deal of rain during the first week. This was followed by a dry spell. Unsettled again during the third week, but the closing ten days were hot and fine.

September.—A most rainless; very hot during the first seventeen days. A slightly cooler spell from the 18th to the 24th was followed by several warm days lasting till the end of the month.

1930.—June.—Mainly warm and pleasant. One or two very severe thunderstorms (notably that of the 18th) rendered the rainfall for the month at Greenwich heavy (3.65 inches), though the number of days upon which rain fell (namely 7) were comparatively few.

July.—The first twelve days were fine and warm. After that the weather changed abruptly, and the remainder of the month was rainy with comparatively low temperatures.

August.—A dull and unsettled month up to the 23rd. After that there was an abrupt

change to hot weather. There were thunderstorms locally on the night of the 30th.

September.—The fine weather of the end of August continued to the 8th of the month. The remaining three weeks were wet and unsettled. Friday the 26th was a very cold day with torrents of rain.

1931.—June.—Round London and in the south-east of England there was not much rain in this month, though it was very wet in other parts of the Kingdom. An earthquake occurred in some parts of England on June 7th in the early morning; and a week later (the 14th) a tornado visited the Birmingham district. There was a fine, warm spell in the south-east of England during the last ten days.

July.—From the 1st till the 10th the weather in the south-east of England was excellent. Elsewhere there was hardly a day without rain or thunderstorm. From the 14th onward the weather became bad in the London district, and so continued till the end of the month, four fine days excepted (21st to 24th).

August.—During the first two-thirds of the month the weather was of the worst description possible. There were just two or three days of passably warm weather from the 3rd to the 5th. But between those dates there occurred a series of thunderstorms which for violence and intensity found few to equal them. Over 2 inches of rain fell at Greenwich on the evening of the 5th. Then the weather became much worse. There was a whole series of downpours for the next fortnight and some days were very cold. Towards the end of the month the rains abated. The rainfall—judging by British standards—was excessive at Greenwich (6.25 inches), partly owing to the thunderstorm of the 5th; a less amount fell at Kew (3.92 inches).

September.—This month, again, opened with wet weather, but the main feature was the persistent cold. There were a few drier and warmer days about the middle of the month, but later the weather became bleak again.

1932.—June.—Almost rainless. Much sunshine. Very warm at the end of the month.

July.—Much hot weather during the first three weeks, with occasional thunderstorms. The last ten days were marked by unsettled weather during which sunshine was deficient and rainfall plentiful.

August.—The month opened badly. On the evening of the 1st there was a severe thunderstorm, and the next three days were dull and showery. From the 5th onwards there was a remarkable change to fine weather, which lasted till nearly the end of the month. The most persistent feature was the great heat: the temperature on several days much exceeded 90° F. It was not exactly a period of drought, as during this hot spell there was more than one thunderstorm. Heavy rain fell on the night of the 29th, but the closing day of the month was fair.

September.—During the afternoon of the 1st rain set in and continued with little intermission till the 8th. The 9th was a fine, warm day, but the next three days were unsettled. Then followed nearly a week of warm weather without rain. On Sunday the 18th there was a heavy fall, and after this, with the exception of an occasional bright day, the remainder of the

month was marked by cold and sunless weather with frequent rain. The winds during this latter period were mainly from the north, north-west or east.

SUMMARY.

The special interest attaching to the weather survey of this short series of Holiday Months (1927-1932) consists in the fact that every kind of summer weather is represented. The summer of 1927 was distinctly bad, and so was much of that of 1931; that of 1930 was very mixed in character. The summer of 1928 was very fairly good, that of 1929 very good, and the summer season of the present year (1932) again good, though comparatively short in duration.

Taking the years in the order in which they come, the following are the special points of interest. With the exception of the disastrous summer the weather of the year 1927 was fairly good. The preceding winter was mild, the spring fine and warm, and the later autumn pleasant. But the bad weather persisting at intervals from the later part of June to the end of September destroyed the reputation of the year in this respect. July was wetter than June, August wetter than July, and September wetter than August. The holiday season proved a complete failure, and at the end of September the drenched and mildewed corn was cleared off the fields as so much rubbish.

The winter of 1927-28 was short, though severe, it was over for the time being early in January though there were brief returns of it in March and April. The Spring really set in during January; the weather was variable, periods of brightness alternating with those of gloom. The summer weather lasted from late in June to nearly the end of September. There was much rain in the later autumn, and in December the extremely severe winter of 1928-29 set in.

The summer of 1929 was the terminal period of a drought that began in the early months of the year—that is during the intense cold. There was little warmth in June, but most of July and parts of August were hot. The heat and drought of September 1929 exceeded that of September 1928. A very wet autumn and wet early winter

followed; and, as a result of this, the rainfall, deficient during the greater part of the year, equalled the average.

Much of the spring of 1930 was wet; some pleasant weather followed in June and early July; the remainder of July and most of August were unsettled. There was a short period of heat at the end of August and beginning of September; the remainder of the latter month was wet. A fine October followed; too late, however, to be of value for holiday-makers and of use for the in-gathering of the crops.

The later spring of 1931 was wet; April was very cold. As regards the earlier summer months, the weather was much worse in June in districts elsewhere than round London, and the same remark applies to July. August was wet everywhere in Great Britain except in the west and north of Scotland; the prohibitive cost of getting there precluded its access to the majority of holiday-makers in that month. Taken as a whole the bad summer formed the terminal portion of a wet season beginning in April. As regards September 1931 that month was distinguished not so much by excess of precipitation as by excess of cold. October 1931 was, proportionately, much warmer than September.

In the present year (1932) one distinguishing feature has consisted in the wet and cold late spring following a dry period which embraced part of January, all February and most of March. In fact the weather of April and May of this year resembled that which prevailed in the corresponding months of 1931, except that whereas last year April had the worst weather, in this year (1932) May was comparatively colder, and much the wetter of the two months. Instead, however, of a persistence, more or less, of cold and wet throughout the three following months, as in last year, there was a welcome change, with a prevalence of great heat during most of June, much of July, and nearly all August. The weather of September 1932 however, has shown no improvement over that of the same month last year. It was rather wetter and the later part of the month was exceedingly cold.

LABOUR AND PARLIAMENT.

Strength of the Labour Party in Parliament

BRITISH ASSOCIATION.—The annual meeting of the British Association for the Advancement of Science was held at York from Aug 31 to Sept 7. The President was Sir J. Alfred Ewing, who succeeded Gen. the Rt. Hon. J. C. Smuts, and delivered an inaugural address on the subject of "An Engineer's Outlook." He spoke in terms of grave concern of the trend of modern mechanical progress. The cornucopia of the engineer had been shaken over all the earth, scattering everywhere an endowment of previously unpossessed and unimagined capacities and powers. Man was ethically unprepared for so great a bounty. The command of Nature had been put into his hands before he knew how to command himself. In the mechanization of life, machinery delivered a stream of articles in the creation of which the workman had little part. He had lost the joy of craftsmanship, the old satisfaction in something accomplished through the conscientious exercise of care and skill. In many cases unemployment was thrust upon him, an unemployment that was more saddening than any drudgery. There was a sinister side even to the peaceful activities of those who in good faith and with the best intentions made it their business to adapt the resources of Nature to the use of man. He could not tell where to look for a remedy. A perfect adjustment of labour and the fruits of labour, a fair spreading of employment and of wages and of all the commodities that machines produced, would still leave the question, how was man to spend the leisure he had won by handing over nearly all his burden to an untiring mechanical slave? But he could not think that man was destined to atrophy and cease through cultivating what after all was one of his most God-like faculties, the creative ingenuity of the engineer.

The Presidents of the various sections, and the subjects of their addresses, were as follows: A. Mathematics and Physics, Prof. A. O. Rankine, "Some Aspects of Applied Geophysics"; B. Chemistry, Dr. W. H. Mills, "Some Aspects of Stereo-Chemistry"; C. Geology, Prof. F. G. H. Boswell, "The Contacts of Geology. The Ice Age and Early Man in Britain"; D. Zoology, Lord Rothschild, "The Pioneer Work of the Systematist"; E. Geography, Prof. H. J. Fleures, "The Geographical Study of Society and World Problems"; F. Economics, Prof. R. B. Forrester, "Britain's Access to Overseas Markets"; G. Engineering, Prof. Miles Walker, "The Call to the Engineer to Manage the World"; H. Anthropology, Dr. D. Randall-MacIver, "The Place of Archaeology as a Science"; J. Psychology, Prof. Beatrice Edgell, "Current Constructive Theories in Psychology"; K. Botany, Prof. J. H. Priestley, "The Growing Tree"; L. Education, Mr. W. M. Heller, "Present-Day Teaching of Elementary Science"; M. Agriculture, Prof. R. G. White, "Sheep Farming: a Distinctive Feature of British Agriculture".

The Meeting in 1933 will be held at Leicester, under the Presidency of Sir Frederick Gowland Hopkins, P.R.S.

AIR SPEED OF 800 MILES AN HOUR.—Air speeds up to 800 miles an hour, which is faster than the speed of sound, have been reached in the course of a number of experiments in the Langley Field high-speed wind tunnel of the National Advisory Committee for Aeronautics, U.S.A. It was definitely established that with the present conventional form of wing section

the increase in drag at about 600 miles an hour is so great that it will be impossible to carry sufficient power to overcome it, assuming the present methods of conversion of fuel to air thrust. This is confirmed by experience with high-speed propellers, the blade tips of which may be travelling at a peripheral speed approaching the velocity of sound. In such cases their outer portions may be actually exerting a negative effect. The delicate mechanisms of the human body do not appear to be susceptible to steady high speeds, but react to accelerations at much lower figures. This arises often during flight, when every turn is an angular acceleration. It has been established that the maximum speed that the human body can stand during an average sharp turn is about 300 miles per hour.

ALUMINIUM ALLOY.—A new aluminium alloy, known as M.V.C., has been placed on the market by the Metropolitan Vickers Electrical Co. This alloy is pure aluminium-silicon, in which the amount of impurities have been reduced to a negligible proportion. It can be rolled into thin sheet or drawn into bars, spun, pressed, or stamped, whilst castings can be bent without breaking; it can also be forged and welded without difficulty. It is used principally in the form of castings for parts requiring maximum resistance to tarnish and corrosion. The new alloy has been employed in certain Admiralty work, owing to its ability to withstand the effects of salt water and sea air for long periods.

ANTS AS MINERAL DETECTIVES.—A study of ant-hills in many undeveloped areas of America has provided valuable clues to the deposits of precious metals beneath the surface. Although occasionally located at the surface, the minerals are generally deeply buried, and in the case of one big test in the Florida mountains it was only by the examination of the materials of the ant-hills along the general projection of the vein that the scientists were able to continue their investigations. The ants, they found, brought up bits of the minerals from beneath the surface of the earth. The transportation is accomplished by the "workers" of the ant family. A field investigation in Idaho in a region of weathered igneous rocks was also aided by an examination of the material of ant-hills, which in this case showed the presence of quartz. Much of the ant's value as a "detective" of mineral deposits is said to be due to its remarkable ability in selecting certain mineral soils for their agricultural value. The ant's gifts as a farmer are shown by the activities of one family, which weed a selected space and only allow plants with edible seeds to grow there. In due time the seeds are gathered and stored in the form of little biscuits which are made from a chewed seed dough and dried in the sun.

ARTIFICIAL LARYNX.—The Western Electric Company has made a talking picture of an invention that may be described as a mechanical larynx, which, it is claimed, will restore the power of speech to those whose natural larynx has been surgically removed or whose vocal chords are paralyzed. When an operation is performed for the removal of the larynx, the mouth and throat are disconnected from the lungs, and the windpipe is terminated in a small

opening at the base of the throat. To use the artificial larynx, a rubber pad device is placed over this opening. The air which is normally exhaled here by a person suffering from the infirmity is conducted through rubber tubing to a small metal sound-box in which is located a reed. The force of the exhaled air striking the reed causes it to vibrate, thus producing sound. The sound in turn is passed on to the mouth by a rubber mouthpiece, and, through the movement of the mouth, throat and lips, which are actuated in a similar manner as for normal speaking, the sound is modulated and converted into intelligible speech. It is claimed that the speech as manufactured by the device is almost indistinguishable from the natural voice.

AUTOMATIC TYPESETTING.—Mr. Buford L. Green, a printer on the staff of the "Charlotte Observer," North Carolina, has invented a process for automatic typesetting which enables a sheet of ordinary typewritten copy to be put into type without the intervention of a linotype operator. The copy is typed in the usual way on an ordinary keyboard, but the typewriter is so built that with each letter typed a symbol, in the form of varying combinations of dots, representing that letter, appears on the paper. The symbols are all that are essential, the letters being given on the keyboard merely for the convenience of the typist. The paper is placed in the carriage of a linotype machine, and the carriage released by an electric switch. This carriage then moves to and fro automatically, passing the whole of each line of the dotted typescript in succession under a tiny beam of light. As each combination of dots passes under the beam the light passes through the paper and falls on a photo-electric cell, which converts the light impulses into electric impulses, and these in turn operate the mechanism regulating the release of the proper matrix from the magazine. For the purpose of demonstration the machine was regulated to produce six lines a minute, but it is claimed that its speed is limited only by the ordinary limitations of the linotype machine.

BEACON FOR AIR TRAFFIC.—The Companhia Aga do Brazil, a subsidiary of the Swedish Aga Company, has built a lighthouse for aviation and shipping on the almost inaccessible islands, Penedos de Sao Pedro e Sao Paulo, a considerable distance off the coast of Brazil. It was primarily the needs of Transatlantic aviation that decided the Brazilian Government to have the lighthouse constructed. Owing to the difficulty in landing on rugged rocks, the only possibility was to select an Aga beacon, the invention of Dr. G. Dalen, the blind Swedish Nobel Prize winner, who lost his sight while experimenting with the accumulation of gas needed for these lights. The Aga beacons, through a device called the sun-valve, work automatically, extinguishing themselves at daylight and switching on the light at dark or in a fog without being touched by a human hand for more than a year. When the gas mantle is burnt out it is automatically replaced. Besides this lighthouse, said to be one of the most powerful in the South American waters, a reserve beacon has been built on the same islands and constructed so as to operate automatically if the main light should get out of order.

"BLACK FLY" PEST IN JAMAICA.—An announcement by the Jamaican Department of Science and Agriculture suggests that the "black fly," which has for years been a menace to cultivation chiefly of citrus trees, in Jamaica, is likely to be exterminated in the near future. These particular flies cluster in large numbers on domestic plants; they suck the sap, with the result that the trees become weak and unhealthy and do not produce the maximum quantity of fruits. The Department is combating the pest by means of millions of tiny wasps, which on being hatched attack the "black fly." With its sting the wasp punctures the body of the "black fly," and lays an egg in the wound. In a short time the grub developed from the egg destroys the "fly." It then emerges as a fully formed wasp and repeats the work of its mother.

BLIND READING PRINT BY SOUND.—M.M. Thomas and Conland, two French inventors, have devised an apparatus by which ordinary print can be made legible for the blind. The apparatus is called the photoelectrograph. A ray of light is passed over the printed page, and as each letter is illuminated the corresponding letter is presented in relief and in magnified form in another part of the machine, where the blind reader identifies it by touch. Not only ordinary print, but also Braille can be read with the machine; and in the latter case the Braille characters can be printed with ink on a smooth page and need be no larger than ordinary type, thus reducing Braille types to a convenient size and making them cheaper and easier to produce than hitherto.

BRINE FREEZING OF FISH.—The new method of freezing fish by means of brine, as carried out at the Torry Research Station, Aberdeen, has proved entirely successful. By improving existing methods of handling and stowing while fresh at sea, it had been found possible to keep it in good condition for fourteen days, but when trawlers went to more distant fishing grounds cold storage at temperatures of about 15° F had not been very successful. With brine freezing at -5° and subsequent storage at -6°, it has been found that fish can be kept for periods up to three months. In the course of a number of experiments last summer, fish caught off Aberdeen by a vessel attached to the Torry Research Station two or three months earlier were eaten with relish in London. The capital value of the brine freezing and storage plant is about £2,500, but figures have been prepared to show that, allowing for depreciation and maintenance costs, the use of the plant would be to the financial advantage of the trawler owner. He would be saved the loss at present caused by deterioration of part of the fish. The view is also held that there would be brought about an improved supply of fish in prime condition and the gradual elimination of stale fish.

CAST-IRON ROADWAYS.—The first cast-iron roadway laid in a public highway to the satisfaction of a public body was put down in West Ham in August, 1931. The system, which was invented by Major Frank Smill, is known as the Tripedal Unit System of Cast Iron Road Surfacing, and the construction is being adopted by boroughs in various parts of England and is also being laid on the Continent. The units are

constructed of equilateral triangular castings, measuring $\frac{1}{2}$ in. by $\frac{1}{2}$ in., and weigh $10\frac{1}{2}$ lb. Ten square yards of this cast-iron construction weighs one ton.

CIGARETTES AND SOUND.—Prof. Andrade, Quain Professor of Physics at University College, London, has discovered that the smoke of the "gasper"—the comparatively cheap cigarette—is the ideal indicator for the rapid vibrations of air which we experience as sound. By this means he has obtained direct measurements of the movements of air during the passage of a sound; and his results may find industrial application in the "clotting" of smoke to enable waste products to be recovered. An assistant blows the smoke through a drying tube into the long tube in which the sound experiments are conducted. The movement of the air is extraordinarily small. Although movements down to one-thousandth of an inch can be measured, it is estimated that the human ear can detect movements of less than one-millionth of this amount, corresponding to a change of pressure of one-thousand millionth of that of the atmosphere.

CREASELESS COTTON.—Fourteen years of research and the expenditure of thousands of pounds by the Tootal Broadhurst Lee Co. has resulted in a process for the treatment of cotton, artificial silk, and silk textile fabrics which renders them as creaseless as woollen materials. It was found that by putting a synthetic condensation product inside the cotton hair and inside the artificial silk filament, so that it enters these spongy substances just as a dye goes into a properly coloured cloth, the fabric of cotton or artificial silk was endowed with wool-like properties in respect of creasing. The condensation product has the advantage of adding to the weight of the material, and, as it is cheaper than cotton, and the method of applying it is not expensive, it can be used for a large range of fabrics. The process has a further advantage when used with artificial silk of the viscose variety; it not only strengthens the material in the dry state, but it nearly doubles the wet strength, and thus overcomes a notable defect of certain artificial goods in becoming rotten by washing. The process is also applicable to linen, shoddy, and silk.

DEAF SPEAKER.—Prof. F. Bedell, the well-known physicist of Cornell University, has invented a device which will enable the deaf to hear radio and gramophone music. He calls it the "deaf speaker," because it serves a purpose similar to a loud speaker in a radio set. It does not broadcast sound, but carries vibrations of the requisite amplitude and frequency to anyone who holds the receiving part of the apparatus with his teeth or pressed against his forehead or a cheekbone. Prof. Bedell worked on the theory that most people who hear badly have a defective middle ear, and sought to bring the sound waves to the inner ear by some other channel. He found that it could be done by bone conduction to the inner ear of the listener. It was not sufficient to transmit vibrations of the same frequency as the actual sound waves to the inner ear of the listener; they must first be adjusted to the requisite loudness and frequency. This adjustment is substantially what takes place in the normal middle ear. Prof. Bedell's

deaf speaker steps up the force of the sound waves very appreciably. Since some people are deaf to high tones and others cannot hear lower tones, the deaf speaker is provided with a device for altering the frequency. At a demonstration at the National Academy of Sciences, Prof. Bedell showed two kinds of receiving instruments, in one of which the receiver, which looks like a long tube, is held between the teeth, while the other consists of a flat disk held against the forehead or a cheekbone. The disk type has made it possible for deaf people with the aid of a microphone to hear their own voices.

ECLIPSE OF THE SUN.—A total eclipse of the sun occurred on Aug. 31. The track of totality after passing the North Pole crossed Hudson Bay, Quebec Province, Vermont, New Hampshire, and Maine, and ended in the Atlantic Ocean. The belt of totality was about 100 miles wide, and at the centre of the belt the eclipse lasted about 100 seconds. Unfortunately clouds obscured the eclipse for many of the observers. At Louiseville, 50 miles north of Montreal, eight photographs of the corona were obtained with an 8 in. camera. The shadow bands began 30 seconds before totality, and continued for 30 seconds after it. They came from 6 inches to 8 inches apart at the beginning, and gradually closed to about a inches apart. Prof. Andrew Thomson, of the Canadian Meteorological Service, noted that the shape of the corona was more pointed and less evenly arranged than in the eclipses of 1918 and 1929. Prof. N. Hirayama, director of the expedition from the University of Kyoto, observed the eclipse from Alfred, Maine, and obtained what he believes to be a unique and perfect picture of the entire corona, and colour photographs of every part of the spectrum, ranging from the ultra-violet to the extreme infra-red. He also claims to have discovered a new gas in the spectrum, which he has called "forty-one."

"EGYPT'S" GOLD RECOVERED.—Gold in ingots and sovereigns to the value of more than £725,000 has been recovered from the P. & O. liner *Egypt*, which was sunk in collision in 1922, with a loss of many lives, 25 miles south-west of Ushant, at a depth of 66 fathoms. The value of the whole treasure which was sunk is substantially more than £1,000,000. The cargo of gold consisted of 1,089 ingots, which were packed in 122 cases, and weighed something over 4½ tons. There were also 37 boxes of gold sovereigns to the amount of £164,979, and 43 tons of silver, consisting of 1,229 bars weighing between 60 lb. and 70 lb. each. The finding of the gold was the fruit of long and patient effort, for the Italian divers on the salvage boat *Artiglio* had been working on the wreck for three years.

ELECTRICITY TRANSMISSION.—The method by which an electric current passes through metal is claimed to have been discovered by Prof. J. C. McLennan, of Toronto University. He has combined metals which, under very low temperatures, proved themselves perfect conductors of electricity. These alloys, made into rings, have carried an undiminished flow of current round and round for hours at a time, the flow, in some experiments, having measured up to 200 amperes, or enough to have brought 200 electric light bulbs to full brilliance. The temperatures at which these alloys were perfect conductors were created through the use of liquid helium, and Prof. McLennan states that

it only remains to discover an alloy which will be a perfect, or nearly perfect, conductor at ordinary temperatures in order to make all existing electrical transmission equipment obsolete.

EYEBROWS AND EYELASHES—Prof. V. Suk and Dr. F. Rosprým, of the Faculty of Science of the Masaryk University, Brno, have published a preliminary report of their study of eyebrows and eyelashes in man. They divide eyebrows into 11 types, according to form, which varies extensively. Of 470 cases the greatest number are classified as "spreading," those which are evenly formed on each side occurring much more rarely, 96 cases of the latter as against 157 of the former. The "even" occurs 20 times as frequently in women. "Peaked," rising in the middle, is rare, occurring 12 times only. "Narrowing," in which the eyebrows are thick at the medial end and narrow towards the distal side, seems to be a feminine form, occurring three times as often in women. A whorl running outward from the nose is also feminine. Long curved eyelashes occur 150 times in a total of 470, being present twice as often in children under 16 years of age. It is an infantile form, for this type of eyelash is shed at puberty and often replaced by a different type. Short and straight occur equally often in men and women, but never in childhood. Short-curved is least represented, and occurs most frequently in men, never in children. Form and colour are not inherited together, but the inheritance of form is clearly to be seen.

FISH STEPPED BY ELECTRICITY—A scientist at Oregon State College has discovered that fish are sensitive to weak electric currents and that it takes very little power to paralyze them, that less shock is needed to stop long fish than short ones, that they recover from shocks according to their vitality; that when they get too much electricity they are stunned and change colour, and that high-frequency current has very little effect on them. In a recent development in the salmon rivers of the American North-West, fish are steered towards the right streams by placing electrodes across the mouths of irrigation ditches, passing a current of 24 volts, which induces the fish to avoid the wrong turnings.

FLYING FOXES IN AUSTRALIA—The Australian Council for Scientific and Industrial Research has conducted an enquiry into the prevalence of the flying fox and its economic significance. It is shown that flying foxes, some of which measure 4 feet from wing-tip to wing-tip, are not a serious menace to the fruit industry; and since the numbers are much greater than had been supposed, the effective control of them is regarded as beyond compass at reasonable cost. These bats live in "camps," and a typical Queensland "camp" during the day, when the animals hang asleep upon the trees, covered 5-10 acres of rain forest. When the camp rose for the night at 6 o'clock it formed a great column, about 100 yards wide and 100 feet deep in the centre, which continued to discharge itself out of the trees continuously for 15 minutes. The number of bats was estimated at about 200,000, and this was a small camp. A really large camp on Red River was half a mile wide and about 4 miles long, and the bats were present in millions.

FORESTS PLANTED BY THE BRICK—Prof. Svend Heiberg, of the College of Forestry at Syracuse, who has been studying forestry methods in Europe, has described a new type of seed-sowing developed in Norway which he terms "planting forests by the brick instead of by the tree." The seed bricks or briquettes are made of good soil, and are $1\frac{1}{2}$ in. \times $1\frac{1}{2}$ in. in size. Three or four seeds are placed at one end near the surface, and the briquette is then dipped in paraffin wax, except the side in which the seeds have been placed. The briquette can then be put in the ground by means of a specially designed tool. Prof. Heiberg, who has been experimenting at the College with this new system of planting, suggests that the idle lands of the United States may be re-afforested by this means, but it would only be practicable on bare land free of heavy weed growth.

GULF STREAM—Mr. P. E. Church has communicated to the American Geographical Union the results of his investigations on the behaviour of the Gulf Stream, from which it appears that the stream has many irregularities in width and temperature, but no seasonal fluctuations. The data were obtained by recording instruments placed on commercial vessels crossing the triangle of waters between Halifax, Bermuda, and the Georgian coast. Freshwater extends to about the hundred-fathom line, beyond which is a wide area of cool water, ending in a narrow band of cold water believed to be due to upwelling from the depths. The Gulf Stream lies beyond, and was found to be 50 miles wide off Cape Hatteras and not more than 70 miles wide south of Nova Scotia. Outside the Gulf Stream to the south-east lies a broad area of warm water reaching towards mid-ocean. During the winter months, and occasionally at other seasons, the Gulf Stream flows as a double stream, with a tongue of cold water between, which may pinch off the northern stream and push the main stream considerably southward. Mr. Church doubts if wind action is the cause of this. South of Halifax the northern end of the Gulf Stream averages a distance of 200 miles offshore but varies between 230 and 400 miles.

HAIR IN DETECTING CRIME—A new method of determining accurately the age of a human being by "hair rings" is claimed to have been found by Dr. Carlton Hood, of the scientific crime detection laboratory of Northwestern University, U.S.A. The human hair, he says, is as important as a finger-print. It is possible to prove that one hair can come from only one man. The ring system is quite simple. Rings run around the hair at intervals along it, and not one inside another as they do in a tree trunk or an onion. A young woman's hair grows rapidly. Age makes it grow slower and not so steadily. A hair grows for a time, then stops for a time. Each stop produces a discoloration at the point where the hair emerges through the scalp, and the discoloration becomes a ring. If there are six rings to a tenth of a millimetre, the subject is twenty; if there are twelve rings to a tenth of a millimetre, the subject is forty. Dr. Hood says he has helped solve one murder by the hair test. A Hindu was killed, and a single black hair was found clutched in the victim's hand. After routine tests, Dr. Hood advised the police to search for a Philippine, aged thirty-two, a dish-washer, who often went

bareheaded and had a scalp disease unknown except in the tropics. And so the criminal was duly traced.

HALF A MILE UNDER THE SEA.—Dr. William Beebe and Mr. Otis Barton, whose diving experiments were described in WHITAKER'S ALMANACK for 1931, have succeeded in descending to a depth of half a mile below the surface of the sea at a point off Nonsuch Island, in the Bermudas. They once more used Mr. Barton's invention, the "bathysphere," which is a steel ball built to resist tremendous pressure, and equipped with more than 40 gallons of oxygen. Two hours were spent on the voyage. Wireless stations in New York first picked up Dr. Beebe's voice in describing his experiences when he was 1,500 feet below the surface. At 1,700 feet he said "It is pitch black now" but he was able to make out a number of fishes, which were visible only by the light radiating from their luminous sides. The colour of the fishes varied from pale green to pale blue, there were no deep tones. Many photographs were taken. At a depth of 2,000 feet the sea resembled a clear sky at night whose black depths are full of stars. At the lowest point the pressure on the "bathysphere" was 5,000 tons, and the inside temperature was 50°.

HUMBOLDT CURRENT.—Researches conducted from the R.R.S. *William Scoresby* throw doubt on the generally accepted explanation that the Humboldt Current of the Pacific coast of South America is derived mainly from the westerly drift of the Southern Ocean and only partly by the uprising of cold water. The *William Scoresby* was engaged in surveying the Humboldt Current during the winter of 1931. The current was not found, at that season, south of Valparaiso, which seems to dispute the view that the surface drift of the Southern Ocean feeds it, and favours the secondary cause, namely, the upwelling of cold water due to prevailing south-east and south-westerly winds. The current reaches its maximum width and greatest strength, about 25 miles a day, off Peru. It finally disappears about five degrees south of the equator, underneath the warmer waters of the El Niño current that sets south. The El Niño waters occasionally pass inside the cold Humboldt waters, with disastrous consequences to the climate of Peru. The Humboldt Current has always been known to be very variable from year to year, and its seasonal fluctuations take it well south of Valparaiso in summer and even in winter, but at that season at a considerable distance from the coast.

INFANTILE PARALYSIS.—At a meeting of the American Association for the Advancement of Science, Prof. Frederick Eberson, director of the clinical laboratories and research at the Mount Zion Hospital, San Francisco, announced that he had succeeded in cultivating the virus of poliomyelitis (infantile paralysis) in a special culture medium, and in reproducing the disease in the monkey by inoculation of the culture. The virus has long been known as an invisible and filterable one, in which state it is present in the brain and spinal cord of the patient, but in the culture it is claimed that it becomes larger and assumes a form which is just visible microscopically.

INSECT DENSITY AT SUNRISE.—A number of experiments have been made in France by Mon.

A. Bonnet to determine the "entomological density" of the air a few feet above the ground. This quantity, defined as the number of insects in a cubic metre, was obtained by means of a muslin net attached to the front of a motor-car. The car was driven for a kilometre in unfrequented regions far from places where insects collect in exceptional numbers, and the insects in a 1,000 cubic metre sample of air were collected and counted. The density was found generally to vary from one or two at sunrise to about 70 in the early afternoon, with a subsequent decline to one or two again at sunset. Those species normally found only very early and late tended to appear in the middle of the day when the air was nearly saturated.

K-GUTTA.—In a paper published in the *India Rubber Journal*, Mr. J. N. Dean describes the preparation and properties of a new thermoplastic insulating material known as K-gutta, which has been specially designed for the insulation of submarine telephone cables and high-speed submarine telegraph cables. K-gutta consists of an intimate mixture of 60 to 70 per cent of gutta-percha hydrocarbon with 30 to 40 per cent of purified petroleum jelly. The dielectric constant of K-gutta is only 2.5 under the working conditions of a submarine cable, compared with the value 3.3 for normal cable gutta-percha, and its power-factor under similar conditions towards an alternating current of 2,000 cycles only about 1/3 that of gutta-percha.

LIVINGSTONE CLEAR-VIEW SCREEN.—Mr. R. W. Livingstone has patented an invention for securing a clear view from the bridge of a steamer in the worst of weather. The device consists of two screens set up in parallel, with two open slits exactly opposite each other, through which the clear view is obtained. Below the outer slit there is a channel three times as wide as the slit, which leads upwards and backwards through the open space between the slits into a continuation of the channel, which passes over the head of the look-out man. The wind and rain which rush in through the outer observation slit are met by the wind which enters by the outer channel below, and the force of the wind through the channel being so much greater, carries the wind and the rain upward and through the upper channel. In other words, the wind is used to blow the wind away. In one experiment it was found that with wind and rain ahead, the screen stopped about 80 or 90 per cent. of the rain and all the wind; and in another experiment it was reported that "practically every drop of moisture is driven over the look-out's head before it reaches the eyes or face."

LONDON'S NEW WELL.—A supply of 8,000,000 gallons of water daily is made possible by the construction of a new well at Deptford, as part of a great scheme of improvements by the Metropolitan Water Board. The diameter of the mouth of the well is 14 ft.; it is 118 ft. deep; and its cost was £200,000. It has been connected by adits to three older wells, which are now replaced, so that its great pumping plant, which raises the pure chalk water to points 400 ft. above the River Thames, now brings all the supply up the new shaft. The water, being pumped direct from the chalk, does not require filtration, chlorination, or treatment of any sort.

MICE PLAGUE IN AUSTRALIA.—Vigorous attempts are being made in Australia to combat the plague of mice, which are causing enormous damage to crops. The greatest visitation of these pests occurred in 1917. The plague was first noticed in February and March of that year; it was at its acme between April and August. At Lascelles, three tons, approximately 200,000 mice, were caught in one night. Until the end of June, 1917, the recorded total caught was 544 tons, at least 32,000,000 mice. In March, 1932, after all the wheat had been trucked from the Lali railway station, near Warracknabeal, in Victoria, a raid was made on the mice. The site was fenced, and two 40-gallon oil drums were sunk in the ground. The duunage was then cleared and the mice driven into the drums. On the first night the catch, placed on the weighbridge, weighed one ton, and on two successive nights eight cwt. and ten cwt. were caught.

MICROPHONE FOR THE COAT LAPEL.—To get over the difficulty of speakers who move about freely in front of the microphone, with the result that sometimes they can scarcely be heard, the Bell Telephone Company has invented the lapel microphone. This instrument is only about an inch in diameter and weighs one and a half ounces. A thirty-foot length of flexible cord provides the connexion to the amplifier of the public address system. The diaphragm is made of thin aluminium in the form of a cone of sufficient stiffness to cause it to vibrate as a unit throughout the required frequency range. A rubber covering eliminates the disturbing noise which would otherwise result from rubbing against the speaker's clothing, or would be picked up through the clip which is provided for attaching it to the clothing. The best place to attach the clip is to the lapel of the speaker's coat. This device has been used successfully in large auditoriums in America, where it has proved useful to speakers who depend on gestures for effective delivery or who need to turn to explain lantern slides or to use a blackboard.

MUMMIES UNDER X RAYS.—Mr Roy L. Moodie has carried out an X-ray study of the unopened Egyptian and Peruvian mummy-packs in the collections of the Field Museum of Natural History, Chicago, which has yielded valuable additions to our knowledge of diseases in ancient times. The percentage of disease or injury among the fifty-three mummy-packs examined is high, 10.5 per cent. of the Peruvian pre-Columbian mummies and 40 per cent. of the Egyptian being affected. The examination of the Peruvian children showed no evidence of rickets, but there was a trace among the Egyptians. The Egyptian mummies showed arthritis, arteriosclerosis, and absorptive osteitis resulting from pyorrhea. Owing to the masses of pitch or sand-sprinkled tar which obstructs the head, and masks and ornament, the interpretation of the teeth is not possible. In the Peruvian mummies arthritis and arteriosclerosis are rare. Few cases of caries can be identified, owing to the intervention of various objects. Pyorrhea and calculus are common. Nasal disturbances of the turbinates were revealed, though none is sufficiently clear to admit diagnosis. Aural tumours were a frequent cause of partial or complete deafness.

MUSK RAT IN EUROPE.—Two cases have been put on exhibition in the Natural History Museum, South Kensington, in order to show what kind of animal the musk rat is, how it lives, and the damage it does. Well known as the musquash, an inhabitant of North America, the musk rat has been for many years of considerable commercial value because of its beautiful, thick, soft, richly coloured and glossy fur. In its original home, the increase of the musk rat is controlled by the usual kind of checks, which do not exist or have not developed elsewhere, and in consequence the animal has become a destructive plague. It is said that in 1905 two males and five females were turned loose in Bohemia; twenty-one years later there were computed to be no fewer than a hundred millions of these animals in Central Europe. Owing to their burrowing habits, the damage that they do to waterways, fields, and bridges is enormous. In Great Britain the danger has been recognised, and under the Destructive Imported Animals Act regulations have been made to control the distribution of the musk rat in this country.

NEANDERTHAL MAN.—During excavations at Florisbad Hot Springs, 25 miles north of Bloemfontein, Dr Dreyer, Professor of Zoology and Archaeology in the Gray University College, discovered the skull of a species of man whom he has named *Homo Helmei*. *Homo Helmei*, he says, bears out the thesis of Sir Arthur Keith that each continent produced its own human races, and also Dr Hrdlicka's thesis that Neanderthal man has not disappeared but is still living to-day in his modern descendant, *Homo Sapiens*. His conclusion is that during the Pleistocene period *Homo Neanderthalensis* must have had a wide distribution and had been differentiated into local races just as *Homo Sapiens* to-day.

NORMAN LOCKYER OBSERVATORY.—On May 28 Sir Frank Dyson, the Astronomer Royal, opened the new Mond photographic equatorial and dome at the Norman Lockyer Observatory, Salcombe Regis, which had been presented by Sir Robert Mond, a generous supporter of the observatory since it was founded. The instrument consists of a battery of four cameras with lenses of different sizes and different focal lengths. It is fitted with clock mechanism, so that it will be possible to follow automatically the movements of the heavens over a wide field of the sky, and obtain exposures hitherto impossible in England. The use to which the instrument can or will be put include the photography of meteors, comets, or large nebulosities of the galactic type. In addition, the search for new minor planets, comets, variable stars, and novae can be undertaken with a greater hope of success than where an instrument of greater power but smaller field of view is used.

PEKING MAN'S USE OF FIRE.—Evidence that "Peking Man" knew how to make fire and used stone implements has now been laid before the Chinese Geological Society. The careful work of Mr. W. C. Pei, the Chinese geologist in charge of the excavation of Chou Kou Tien, where the "Peking Man" was found, has been rewarded by the discovery of a large selection of stone implements which have been chipped with great skill, thus emphasising the fact that the human

qualities of appreciation of form and skill in manipulation found expression in the making of excellent tools. The discovery that the "Peking Man" used fire, which has been confirmed on the spot by the observations of the Abbé Breuil, the French paleontologist, puts back the history of fire-making to a period more than twice as remote as that which hitherto had been assumed, and establishes the contention that "Peking Man" was definitely human. Whether he used the fire merely to keep himself warm or to cook his meat is not certain.

PENMAENBACH TUNNEL—After two years' work a tunnel has been cut through a bastion of rock known as Penmaenbach on the coast road between Conway and Llanfairfechan, North Wales. Its course, 565 feet long, is through a fissure-ridden headland round which runs a notorious section of the Chester-Holyhead road, where, owing to a treacherous geological formation, the traffic has long been threatened by landslides of shale from the steep slopes which strew the face of the mountain. The tunnel consists of a carriageway wide enough and high enough to permit freely of the passage of double-decker omnibuses, and of a roomy pathway for pedestrians.

PETROL FROM COTTON-SEED OIL—Dr. Gustav Egloff, a Chicago chemist, described to the American Chemical Society at its meeting at New Orleans his achievement in making a high grade of petrol from cotton-seed oil. The present cost of such petrol is too high to make it a competitor with the ordinary commercial product, but as the same process can be used with other vegetable, fish, shale, and coal oils of low cost, it has obvious commercial possibilities in countries where petrol is not cheap. Dr. Egloff ran the cotton-seed oil through a metal coil at a temperature of 900° F. and at a pressure of 150 lb. per square inch. The rearrangement of the atoms results in a yield of more than 50 per cent. of petrol, a heavy fuel for Diesel engines, coke, 13 different gases, some of which are commercially profitable, and a kind of alcohol.

PHOTOGRAPHING ERASED WRITING—At one end of the spectrum are the invisible ultra-violet rays, by means of which Dr. Menthe, a German professor, made a photograph in 1908. Five years later Dr. Koegel discovered that erased writing could be brought out by short wave ultra-violet rays, with an exposure lasting many hours; and Lt.-Col. W. R. Mansfield has now evolved a method whereby he obtains similar photographs in a few seconds. He makes his "luminograms" in a special instrument in which the ultra-violet rays pass through a silver screen before reaching the photographic plate. Traces of chemicals in the inks used can never be wholly eradicated, and under the rays it is possible for the writing to be read clearly. A notable success was made with an old blank parchment which had been picked up in Turkey as part of the loot of 1291 of the ex-Sultan's palace. It had been washed and scraped to get rid of the original writing, to make it available for a new communication. Under treatment by Lt.-Col. Mansfield it was proved to be a document addressed to "the great Emperor of the Mussulmans," which seemed to deal with the appointment of Count de Choiseul de Gouffier, and was signed by Louis XVI of France.

PHOTOGRAPHING THE INVISIBLE—By a method of photography which has recently reached a practical stage it is possible to photograph through mist and haze and to secure remarkably clear pictures of distant objects which are invisible to the naked eye. The process has been perfected by Mr. Olaf Bloch, chief chemist to Messrs. Ilford, and President of the Royal Photographic Society. He knew that it is impossible to see far in misty or hazy weather because the moisture in the air scatters the light. The light is scattered also on a fine day, though less when the light is yellowish or reddish, as towards sunrise or sunset. Red light is scattered less than blue. The problem has been how to use the infra-red light in the atmosphere, and to exclude all the light in the atmosphere which is not infra-red. This has been achieved by a filter, or suitably dyed piece of gelatine, placed in front of the lens, which allows infra-red rays alone to penetrate and to carry the image. Though infra-red light is invisible to the eye, the sensitive material employed in the camera is responsive to it. Thus by an infra-red sensitive plate photographs can be taken at distances not possible in the ordinary way with a telephoto camera, and objects revealed which the eye cannot see. By this means it has been found possible to take a panoramic picture of the coast of France from Dover, and of Ben More from the Wallace Monument at Stirling, a distance of 29 miles.

PICTURE CONSERVATION—A new method for the conservation of pictures has been invented by Mr. S. Kennedy North, and successfully applied to the two famous Titians, "Diana and Actaeon" and "Diana and Callisto" in the possession of the Earl of Ellesmere. The picture is first thoroughly soaked in a solution of paraffin wax, which is chemically and bacteriologically inert, and has the power of slowing down the action of any solvent that may be applied to the painting. It is then placed in a frame of metal and asbestos, with a glass top, with holes for ventilation and appliances for regulating the temperature and pressure and an electric fan to induce a regular circulation of the solvent vapour. The picture is placed face upwards in the frame and the solvent vapour applied. Its action is to dissolve the binding constituents of the varnishes, leaving their other ingredients in the form of a resinous powder, which is then carefully removed. The effect of this process is to remove the varnishes without disturbing the delicate original glazes underneath, and not only to restore the picture to its original condition without the least injury to the pigment, but to preserve it against future damage from time, insects, and atmospheric influences.

PNEUMATIC TYRES FOR FARM USE—The latest development of the commercial use of rubber is the pneumatic tyre adopted for use on farms. Known as the land tyre, it is a product of Fort Dunlop, and is designed to overcome the disadvantages of the old large-diameter wheels with iron rims. In a series of tests carried out at Castle Bromwich a two-wheeled cart was equipped with 8 in. tyres on 12 in. wheels. It is claimed that by means of the invention heavier loads can be carried and that the saving of horse-power is equal to at least 50 per cent.; greater speed can be achieved; travel over soft ground is made easy, and obstructions, logs, ruts

and inclines are readily surmounted; the carting of loads over grass-land can be carried out without cutting ruts; the low loading cart with its small-diameter wheels reduces handling effort; time and labour are saved in potato planting; when used for transporting cattle to market the animals travel in greater comfort and at greater speed; the cart does not break down ridges or harden furrows; and there is a reduction in the initial cost and maintenance of wheelwright's work. The rubber of the tyre is compounded to resist farmyard acids.

PREHISTORIC SETTLEMENT IN WILTSHIRE—During the last six years Mr. Alexander Keiller has been excavating the site of the prehistoric settlement at Windmill Hill, Wiltshire, about one mile from Avebury and 615 feet high. The earthwork was found to contain three concentric ditches, dug in the solid chalk in short, straight sections, adjacent sections being divided by a causeway. The most spectacular of his discoveries was the earliest example of a skeleton of a domesticated dog, which is regarded as probably being earlier than the domesticated dogs known to have been used by the lake-dwellers in Switzerland. He also found the skeleton of a six-months-old child, which was dolichocephalic, like the skeletons in the British long barrows, and the state of its teeth indicated that it suffered from measles. The stones found belong to formations in North Wales and Scotland, showing that the people of Windmill Hill were in communication with those parts, while the remains of wood charcoal indicate the presence of wild apple trees, oak, poplar, willow, elm, ash, and hornbeam.

RAILWAY RUN AT 92.3 MILES AN HOUR—Another record for the fastest train journey in the world was made on June 6 by the "Cheltenham Flyer" on the Great Western Railway. The non-stop run from Swindon to Paddington, a distance of 77.3 miles, was made in 56 min 47 seconds, at an average speed of 81.6 miles per hour, which beat the record of 1931, made over the same route, of 80.7 miles per hour. In order to get this average, including the time spent in getting into speed and the slow approach to Paddington, it was necessary to run a distance of 70 miles in exactly 48 minutes, or at an average of 87.5 miles an hour, while for 30 miles the speed was maintained at over 90, with a maximum of 92.3.

SEAWEED ORIGIN OF PETROLEUM—In a paper read before the Institution of Petroleum Technologists Mr. J. E. Hackford indicated what he regarded as the precise method by which petroleum has been derived from the decomposition of marine vegetation. He claimed to have established the formation of oil from algae by processes similar to those obtaining in nature; the presence of decomposition products of algae in both naturally occurring oils as obtained from wells and also from various oils and bituminous deposits, the reversion of oils into materials closely resembling, sometimes identical with, the constituents and decomposition products of algae, the formation of oils from sugars, and the reversion of oils into bodies resembling bitumens which on hydrolysis yield sugars.

SHIPS GUIDED BY COLOURED LIGHTS—Ocean liners may soon be equipped with a three-colour signalling apparatus, similar to that used for traffic control. Experts at the Radio Research

Station, Datchet, under the Department of Scientific and Industrial Research, have produced a wireless navigating device which automatically records deviations from a course set on any wireless transmitting station. Red means that the helm is to port of the true course, green to starboard, yellow that the course is truly set. The apparatus is guaranteed sensitive to three degrees, and, with more elaborate methods of detection, can be made sensitive to half a degree. The adjustable apparatus consists of two wireless receiving sets, which can be tuned in to any desired station in the normal manner. Where no station is on the exact course corrections could be made on any desired bearing. One of the attractions of the new navigator is that, unlike a compass needle, it cannot swing. The effective indicator is a narrow beam of fast-moving electrons which are so light that they have virtually no inertia. This means that all movements of the ship are immediately shown. The great advantage of wireless navigation is that the effect of drift is entirely eliminated. Moreover, if wireless observations are taken in conjunction with magnetic bearings throughout a voyage, the position of the ship is obtainable exactly without astronomical bearings.

SLEEP—The theory that sleep is caused by the pouring into the blood stream of a chemical manufactured by one of the ductless glands of the body receives definite support from a discovery by Prof. Hermann Zondek, of Berlin. He has discovered a new hormone or internal secretion, which is stored in the pituitary gland at the base of the brain, and is discharged during sleep into the fluid surrounding the brain, and hence to the blood stream. When the patient wakes this discharge ceases, and the hormone is once again stored in the pituitary gland. Prof. Zondek examined the blood of certain patients suffering from manic-depressive insanity, and found that there was less than the normal quantity of bromine present, becoming normal between the attacks. Carrying his investigations further, he found that this lack of bromine was due to the absence of a hormone manufactured by the pituitary, rich in bromine. He succeeded in isolating the hormone in a soluble form, and on injection it produced fatigue, apathy, and a great decrease in motor power. These discoveries fit in with the fact that bromides have a great reputation as sedative drugs, and also with the fact that one of the features of the form of insanity studied is the absence of regular refreshing sleep.

SPLITTING THE ATOM—Dr. J. D. Cockcroft and Dr. E. T. S. Walton, who had been working for three years on special apparatus in the Cavendish Laboratory, Cambridge, under the direction of Lord Rutherford, have succeeded in "splitting" the atom. Using voltages of between 200,000 and 600,000, they sent several millions of particles per second through a vacuum tube at a speed of 20,000 kilometres per second. It was found that the bombardment of different elements by the particles split light elements, but for every atom split several millions of particles were required. "We concentrated on an atom of hydrogen," Dr. Cockcroft said. "We were prepared to work on voltages ranging from 100,000 to 500,000 volts. We found that at 200,000 volts some of the atoms we were bombarding began to break up into helium. These helium atoms came out with energies of

the order of 200 to 250 times that of the particles we were firing into them. In one sense it is true that by this means we are turning 200,000 volts into 200,000 volts. But only one particle breaks up for every 10,000,000 we use to bombard it. We are producing from these atoms 200 to 250 times of the known energy, but only once in 10,000,000 times. Therefore it would only be strictly true to say we were turning 200,000 volts into 200,000 volts if every atom broke up." Dr. Cockcroft also said that though the discovery was of immense scientific importance, it was not of immediate practical value.

STAINLESS STEEL WELDING—According to the "Scientific American," steel with a rust-proof "veneer" of stainless steel is one of the latest developments of welding. The new material, known as plykrome, is made by welding a sheet of stainless steel to a mild steel slab and then rolling the slab into plates. Many problems were encountered in the development of this product. Oxidation, the great detriment to welding, had to be prevented. The weld between the two had to be so constructed as to permit the expansion of the alloy under the influence of increased temperature without breaking its bond with the steel. Welding had to be accomplished at controlled temperatures which would be effective with the alloy metal but not harmful to the mild steel. The primary uses to which plykrome will be applied in chemical process industries will be to prevent the enormous loss in the destruction of steel by corrosion.

STREAM-LINING IN LOCOMOTIVES—Dr. O. G. Tietjens, of the Westinghouse Company, has carried out a number of experiments on streamlining in locomotives and motor-cars. He has found that an electric locomotive travelling at 80 miles an hour requires five times as much power as when travelling at 40 miles an hour. In the case of a heavy locomotive and two heavy coaches, stream-line design saves 13 per cent. of the power at a speed of 35 miles an hour and 38 per cent. at a speed of 75 miles an hour. It requires 285 horse-power to drive an inter-urban street car at a speed of 80 miles an hour. Tests made in the Westinghouse wind tunnel indicate that the same type of car constructed with stream-line design can be driven at 80 miles an hour with only 140 horse-power. The power required in the latter case is less than one-half that required in the former. By converting the modern American trolley-car with its blunt ends, sharp corners, and hundreds of air pockets into a stream-line car, having a new front and a new rear, and the roof made smooth, the sides extended downwards, and the recesses for the windows eliminated, the wind resistance is reduced to one-third its former value.

TELESCOPE WITH 69-IN. MIRROR—The new telescope at the Perkins Observatory, Ohio Wesleyan University, Delaware, Ohio, has been completed by the installation of the large 69-in. mirror. This disk of glass, which weighs 3,000 lb., was cast as an experiment in American glass-making in the optical shops of the United States Bureau of Standards. The annealing, which required eight months of controlled temperature, facilitated greatly the polishing and figuring of the surface of the mirror, which was carried out in the factory of J. W. Kecker, in Pittsburgh. Exhaustive tests showed that the surface was of the highest order of excellence,

and that departures from the mean focus of 25 ft. were not greater than 0.01 in. for any zone. The Perkins telescope brings into the Central States the third largest telescope in existence, the other instruments of greater aperture being the 72-in. reflector of Victoria, B.C., and the 100-in. reflector at Mount Wilson, California.

TELEVISION PROGRESS—Television has continued to make remarkable progress during the year. Dr. H. Hartman, the American submarine explorer and engineer, has visited the Riviera for the purpose of testing his new submarine television apparatus, by which he claims to be able to "see" into the greatest ocean depths. The device consists of a shell globe containing heavy quartz lenses and powerful lamps, the television mechanism, and a motion picture camera, driven electrically and controlled from the ship. As soon as an interesting object comes within the illuminated area in the ocean depths, a touch on an electric lever sets the camera working, and the image is recorded on the film. The submarine television images can, it is claimed, be transmitted by ships wireless to land stations, and thence broadcast by television. Mr. J. L. Baird gave the first public demonstration of ultra-short wave television in this country. This improvement makes it possible for the televised image to be shown on a screen instead of, as in the past, in a lens. The size of the image is also greater, so that more on-lookers can be accommodated. In May a successful experiment showing the combination of ordinary telephony with two-way television was demonstrated in Paris. The head and shoulders of the speaker-listener at either end were clearly visible to the other speaker-listener, and vice versa; the features were easily recognisable, and the play of expression on the faces was remarkably clear. The movement of the lips could be easily followed. On June 2 the television of the finish of the Derby on Epsom Downs was witnessed in a London cinema. The images were large enough and clear enough for the horses and the points of the horses' ears to be seen. A month later the new Baird model televisor, made expressly for home use, was exhibited in the Baird laboratories. The most important advantage of the new instrument is that the image is reproduced on a screen 6 inches high by 4 inches broad, so that it can be seen by a room full of people, instead of by only three or four persons.

TEN AND A HALF MILES HIGH—On Aug. 18, 1932, Prof. A. Piccard, the Belgian scientist, who was accompanied by his assistant, M. Max Cosyns, made his second ascent into the stratosphere, with the object of making a further investigation of "cosmic rays." He started from the Dübendorf aerodrome, near Zurich, in his specially constructed balloon shortly after 5 a. m., rose to a height of 16,700 metres (about 20½ miles), beating his record of 1921 by 910 metres, and after 22 hours flight, during which he crossed the Alps, landed at Cavallaro di Monzambano, 12 miles south of Lake Garda. The balloon had a capacity of 14,000 cubic metres, and the airtight gondola, which weighed 550 lbs., contained an ionisation chamber, instruments for recording the electro-magnetic, electro-static, and mechanical measurements of the cosmic rays, a wireless transmission set, and a barograph capable of registering an altitude

of 22 miles. The air-regenerating apparatus, similar to that used in submarines, was sufficient to enable the two aeronauts to live for 30 hours inside the airtight gondola if necessary. Professor Piccard's preliminary report on his ascent shows that so carefully were all his arrangements made that everything worked smoothly throughout the flight. During the first part of the ascent the aviators breathed the normal atmosphere, but at a height of about 5,000 feet they closed the hatch and rendered their gondola airtight. Throughout the ascent internal atmospheric pressure in the gondola corresponded to that which would be experienced at a height of 5,500 feet. The instruments for measuring the cosmic rays worked without a hitch. Prof. Piccard was able to measure the absorption of cosmic rays by paraffin and lead, and he came to the conclusion that the rays came from all directions with the same intensity. The observations as a whole permitted the belief that the cosmic rays had a stratospheric origin. Equally satisfactory was the wireless apparatus, and messages were successfully transmitted to and received from the earth. Prof. Piccard and his companion suffered greatly from cold, and a contributory cause to this was the white-painted cabin, which repelled the sun's rays. His ascent in 1931, on the contrary, was made almost unbearable by the heat, which was absorbed by the cabin, then painted black. The intense cold made the task of securing measurements rather a painful affair, although it in no way affected their accuracy.

"VOICE" OF PLANET VENUS.—In the course of wireless experiments Prof. Sheppard, of the Science Laboratory of New York University, has been able to obtain a sound like a violin note from the planet Venus and broadcast it throughout the country. Although clouds were gathering, Venus was shining clearly at the moment of the broadcast. The planet's beam shone into a telescope, passed through it, and at the eyepiece was picked up by a photo-electric cell and its sound amplified into the microphone of the radio. As the tuning of the earth brought the telescope to bear on Venus, the sound rose in a crescendo and began its diminution as the movement of the earth carried the telescope out of range. The sounds of objects were also broadcast. The American flag made a noise like an orchestra without a conductor, and a cigar made a hoarse growling sound.

VOLCANIC DUST FROM THE ANDES.—On April 10-12, 1932, violent eruptions took place from a number of volcanoes in the Andes, stretching over a distance of 200 miles, and rising in height from 11,000 to 22,000 feet. Enormous quantities of volcanic dust were deposited over wide tracts of country, and even Buenos Aires and Monte Video, over 700 and 800 miles away respectively, were affected. It was estimated that over 3,000 tons of volcanic debris, in the form of a pale, greyish-white powder, fell on Buenos Aires in a single day. As in the case of the eruption of Krakatoa in 1883, the dust thrown up into the air and carried by upper winds caused fine sunset effects in other parts of the world. In South Africa the sunset colours were magnificent, and the appearance was finer still an hour later, when the western sky showed a flaming red light extending to the zenith, compared to the smoke from a huge volcano. Similar phenomena were observed in Australia,

where the afterglows ranged in colour from pale pink to yellowish pink, and showed a structure suggestive of thin, high smoke. In New Zealand the sunsets in May and June were exceptionally brilliant. Dr. Kilsdonk, the Director of Meteorological Services, also reported that low temperatures were experienced during May, and that in all probability these were due to the volcanic ash reflecting and scattering heat radiation waves coming from the sun to the earth, while the dust particles would also absorb much heat which would otherwise penetrate to the lower atmosphere and the earth's surface.

WESTERN AMERICAN DINOSAUR.—Mr Barnum Brown, of the American Museum of Natural History, while exploring the Cretaceous rocks of Montana, discovered a nearly complete skeleton of the armadillo-shaped dinosaur *Notosaurus*, which has hitherto been known only in fragments. Although the reptile measured only 14 ft. in length, it was 7 ft. wide at the hips. It had heavy scale-like plates to give flexibility, and feeble teeth for feeding on vegetable or insecta. The age of the skeleton is given as approximately 100,000,000 years.

WIRELESS BY ULTRA-SHORT WAVES.—Senator Marconi has announced an important discovery in the development of wireless communication by means of ultra-short waves. Using an apparatus of low power fitted with portable reflectors and producing waves of 57 centimetres, he was able to communicate clearly both radio-telegraphically and radio-telephonically from Rocca di Papa, near Rome, to Cape Figari, in Sardinia, a distance of about 170 miles. The great importance of the discovery lies in the fact that it illustrates the possibility of using the ultra short-wave system for communicating over distances which in theory are impracticable owing to the curvature of the earth. Hitherto Senator Marconi's experiments in the use of these have been successful only for distances contained within the normal horizon, but the difficulty with regard to the earth's curvature has now been overcome, and it is possible to reach stations beyond the visible horizon.

ZUYDER ZEE RECLAMATION.—On May 28 the deposit of clay was made which finally and entirely cut off the waters of the Zuider Zee from the outer ocean, and converted it into the IJssel Lake. The embankment which thus closed the last gap is 18½ miles long, and runs from the eastern extremity of the former island of Wieringen to Zuring, north of Makkum, on the Frisian coast. It is intersected by three locks for the purposes of navigation, and by two groups of sluices for the discharge of superfluous water. The embankment is 120 ft. wide at the top, and 400 ft. wide at sea-bottom. On the top of the embankment there will be a road-wide road, and a railway line will keep up communication between North Holland and the Frisian coast. This closing of the Zuider Zee means that ultimately over half a million acres of land will be added to the country. This will increase the area of the Netherlands by 7 per cent., while giving an addition of arable land equal to 10 per cent. of that now available. This land is divided into four sections, known as the North-West, North-East, South-West, and South-East Polders, and of these the North-West Polder has already been reclaimed from the sea and built on.

LITERARY output, according to the statements of its producers, has suffered less from the financial depression of the past year than most other occupations.

In the enforced search for economies it has been discovered that a book can be purchased for less than a theatre seat, and borrowed from a library at a still smaller expenditure. The total number of books published during the period under review (October, 1931 to September, 1932) is 15,564 as against 14,876 for the previous twelve months, the figures being taken from *The Publisher and Bookseller*, the official organ of the book trade.

There are some indications of growth in the reading habit. Fulham Public Library's latest annual report records the issue of 671,488 volumes, their largest total as yet. Other libraries report increased demand for books other than fiction.

The nation spends close on two millions a year in providing facilities for the use of books; yet with our adult "literate" population of over ten millions the figures of book consumption are still very far from laudable, and an acute critic has recently said that "the reading capacity of the general public has never been so low as at the present time. . . . The general reading public of the twentieth century is no longer in touch with the best literature of its own day or of the past." The circulating library, with its undue emphasis on current fiction, and the new journalism with its herd instinct, are held to blame. "In the past, people did not go to books for an escape from their lives, but to qualify themselves to live to some purpose." Mr. Swinerton writes "It is probably true that 75 per cent of the books published each year involve their publishers either in losses or in profits so small as to be noticeable only in bulk"; and Mr. Samuel Courtland deplors that, of the 180 millions spent annually on advertisement, nine-tenths is worthless from a national standpoint.

Subjects which have aroused acute controversy during the year have been the partial cessation of literary notices by the B.B.C.; the constitution and methods of the Book Society; the author-reviewer, and the ethics of criticism by publishers' readers or other possibly interested parties. In Mr. Langdon Davies' view "the critic should not be employed by any publisher, should be anonymous, should not act as a bait for advertisement, should not be ignorant, nor Protean"—good counsel, which has small prospect of general adoption. "The Hallelujah chorus," as one writer named it, of the book review and advertisement pages of certain Sunday papers has again received a good deal of caustic comment; and discussion has also arisen as to whether the National Book Council should undertake the onus of selection in its book lists, and whether Public Libraries should discontinue the issue of recent fiction.

Turning from the machinery of current production to more general topics, the following may be mentioned amongst features of the year under review:

1. Celebrations of the Centenaries of Scott, Goethe, Lewis Carroll, John Locke, and Crabbe.

2. Exhibitions at Messrs Bumpus's, illustrating the History of the English Press, Lewis Carroll, The Cambridge Press, etc.,

also one of Children's Books at the Victoria and Albert Museum.

3. Issue of a series of new ninepenny novels by Ernest Benn. If these are to pay their way, we are informed by Sir Ernest, 200,000 of each must be sold. For a sale of half that number, the paying price would be half-a-crown.

4. The completion of the first year's encouraging work of The Friends of the National Libraries.

5. Repercussions of a period of financial stringency, in the production of Omnibus Books, and the increasing issues of cheaper editions of old books.

The Bible remains the best seller. The British and Foreign Bible Society reports (Sept., 1932) that "during the last year the Society has issued 1,065,662 complete Bibles, 968,864 New Testaments and 8,517,758 integral books of the Bible, a total of 10,552,284 volumes," and thus in spite of the fact that no Bibles may be printed, circulated or even studied in public in any part of the Soviet Republics, whilst the book is also banned in Afghanistan and Arabia; and in Germany "the description 'godless,' which hitherto no self-respecting man has cared to acknowledge, is now ostentatiously claimed as their own by a considerable section of the population."

The new *Irish Academy of Letters* has been formed with the following membership: Austin Clarke, Padraig Colum, Daniel Corkery, St. John Ervine, Oliver St. J. Gogarty, E. R. Higgins, Douglas Hyde, James Joyce, Brinsley Macnamara, George Moore, T. C. Murray, Sean O'Casey, Frank O'Connor, Sean O'Faolain, Peadar O'Donnell, Liam O'Flaherty, Seumas O'Sullivan, Forrest Reid, Lennox Robinson, George Russell ("A. E."), Miss E. (E. Somerville), James Stephens, Francis Stuart, W. B. Yeats, and G. B. Shaw.

LITERATURE PRIZE AWARDS.

Femina Vix Heureuse.—Of the three books recommended, viz. "The Corn King and the Spring Queen" (Naomi Mitchison); "Tobit Transplanted" (Stella Benson); and "Simpson" (E. Sackville West), Miss Benson's was awarded the prize; *Northcliffe*.—"Saint Saturnin" (Jean Schlumberger); *Hasethornden*.—"Without My Cloak" (Kate O'Brien); *Atlantic Monthly*.—"Peking Picnic" (Ann Bridge); *Pulitzer*.—"My Experiences in the World War" (Gen. Pershing); "The Good Earth" (Mrs. Pearl Buck); "Life of Theodore Roosevelt" (H. J. Pringle); *Royal Empire Society*.—Gold Medal: "The Milner Papers" (C. Headlam); *James Tait Black Prize*.—Biography: "David Hume" (J. Greig); Fiction: "Without My Cloak" (Kate O'Brien).

Censorship.—Amongst books banned by the Irish Free State during the year may be mentioned: "Thunder Below" (E. Bourke); "The Punitan" (Liam O'Flaherty); "Bernard Shaw" (Frank Harris); "Brave New World" (Aldous Huxley); "Seed" (C. G. Norris); "Isabel" (Gerald Gould); "The Single Heart" (Storm Jameson); "And no Bird Sang" (P. Leader); "Safer Motherhood" (Sir W. Arbuthnot Lane), and "Work, Wealth and Happiness of Mankind" (H. G. Wells).

Signs of a welcome slump in sex novels—described recently by Mr. Cecil Roberts as "asterisk literature," are evident this year.

Detective fiction shows no signs of having as yet exhausted its possibilities.

Honours conferred during the year in the domain of literature include Knighthoods for Dr. Raymond Unwin, T. W. McAr, Patrick Geddes and Laurence Binyon; whilst John Buchan and E. V. Lucas became Companions of Honour; and John Murray a K.C.V.O.

Deaths.—Amongst names associated with the production of literature the following may be recorded: G. F. Barwick, Mrs. Mary St Leger Harrison (Lucas Malet), F. H. Revell, Arthur Hind, David M. Murray, Harold Monro, Edward Marjoribanks, Edgar Wallace, E. W. Everett Green (Cecil Adair), R. Brimley Johnson, Mrs. H. Nevinston, Dr. William Briggs, Kenneth Grahame, Fergus Hume, G. Lowes Dickenson, Vere Hutchinson, Frank Harris, Graham Wallas, Sir Gilbert Parker, and Sir Ronald Ross.

The Year—Looking back across the year under notice, the increasing production and greater prominence of biographical and historical work are remarkable in a period not otherwise noteworthy for outstanding features. Guedalla's "Duke of Wellington," Bryant's "Charles II," Buchan's "Scott," the Ellen Terry, Bernard Shaw, Rothenstein and Henry James' Letters and Memoirs were widely read and discussed, and *The Times* "Fifty Years" series naturally evoked very general interest. D. H. Lawrence's death could not fail to stimulate varying criticism of his genius. Russia and the Five Years Plan have demanded the increasing attention of economists and travellers; whilst British travel slogans have stimulated interest in our own countryside, its villages, churches, woods and open air life.

Much (perhaps too much) criticism has been levelled at book societies, and the authoritative reviewers in Sunday and other papers. Their influence is admittedly enormous, and many of their recommendations admirable. But two grains of salt—as readers begin to realise—are needed for the digestion and appreciation of their pabulum. As regards the first, it must be remembered that book societies are commercial booksellers, and that, as was recently stated, a "chosen" seven-and-sixpenny novel can be got for three shillings, if the order be large enough. And, in appraising reviews, Sidney Smith's dictum may usefully be recalled: "I never read a book I review, it prejudices a man so."

A classified selection of books published during the year from October, 1932 to September, 1933 follows. With a few exceptions, translations, reprints and scientific manuals are not included. As an index of popularity—which is of interest, though not, of course, a final criterion of merit—books reported in trade and other journals as "best selling" are indicated by an asterisk (*). The whole selection only includes about two per cent of the publications of the year, and must obviously pass over many good and useful books.

ART.

"The Meaning of Modern Sculpture," by R. Wlinski; "The Near and Middle East," by R. Grousset; "Confessions of a Keeper," by D. S. MacColl; "A Grammar of the Arts," by Sir Charles Holmes; "An Outline of Modern Painting in Europe and America," by S. C. Kaines Smith; "Nineteenth Century Painting," by John Rothenstein; "A Short History of Costume and Armour," by F. M. Kelly and R. Schwabe; "Medieval Costume and Life," by D. Hartley;

"English Painting from the VIIIth Century to the Present Day," by C. Johnson; "Mozart," by Sachverell Sitwell; "Rembrandt," by Arthur M. Hind; "The New Movement in the Theatre" (L. Moussinac, R. H. Packman and Gordon Craig); "Early Muslim Architecture," by K. A. C. Crosswell; "A Short History of French Painting," by E. Underwood.

BIOGRAPHY.

*"King Charles II," by Arthur Bryant; "Edmund Burke," by Rev. R. H. Murray; "Vacant Thrones," by Sir Ian Malcolm; "Foch, The Man of Orleans," by Liddell Hart; "Gordon and the Sudan," by B. M. Allen; "The Letters of Robert Burns," edited by J. de L. Ferguson; "Germaine de Staël," by R. McNair Wilson; "John Wesley," by C. E. Vulliamy; "Ellen Terry and Her Secret Self," by E. Gordon Craig; "Fear and Be Slain," by Rt. Hon. J. E. B. Seely; "Past Years," by Sir Oliver Lodge; "Lord Rosebery," by The Marquess of Crewe; "Life of Robert Marquis of Salisbury," by Lady Gwendolen Cecil (Vol. IV), *Bernard Shaw, by Frank Harris; "John Cromie of Norwich," by R. H. Mottram; "The Life of Daniel Defoe," by Thomas Wright; "Craumer," by Hilaire Belloc; "The Passionate Pilgrim: A Life of Annie Besant," by G. M. Williams; "The Questing Beast: an Autobiography," by Oliver Baldwin; "And no Birds Sing" (the Autobiography of Pauline Leader), "My Indian Summer," by Maude Valerie White; *Sir Walter Scott, by John Buchan; "The Life of Horace Walpole," by Stephen Gwynn; *Sir George Otto Trevelyan, O.M., by G. M. Trevelyan; "But for the Grace of God," by J. W. N. Sullivan; "Sir Christopher Wren: His Life and Times," by C. Whitaker Wilson, "Revolutions," by various Authors, "Julius Caesar," by John Buchan; "Charlotte Brontë," by E. F. Benson; "Chaucer," by G. K. Chesterton (a critical estimate); "Mettelnich," by Arthur Herman; "Three Houses," by Angela Thirkell; "Lamb before Elia," by F. V. Morley; "Sappho of Lesbos," by Arthur Weigall; "Men and Memories," by W. Rothenstein; "Under the Fifth Rib: a Belligerent Autobiography," by C. E. M. Joad; "Charles Gore," by Gordon Cross; "Dorothy Wordsworth," by C. M. Maclean; "Sir William Temple," by Clara Marburg; "Stanhope," by Basil Williams; "Lenin," by James Maxton; "Swinburne," by Georges Lafourcade; *The Journals of Arnold Bennett; "Erskine," by J. A. Lovat-Fraser; "John Clare," by J. W. and Anne Tibble; "Akbar," by Laurence Binyon; "Lady Caroline Lamb," by Elizabeth Jenkins; "Theodore Roosevelt," by H. F. Pringle; "Warburton and the Warburtonians," by A. W. Evans; "The Life of John Redmond," by Denis Gwynn; "The Savage Pilgrimage" (a Narrative of D. H. Lawrence), by C. Cawwell; "Goethe and Schiller," by Annette Meakin; "Unpublished Letters of S. T. Coleridge," edited by Earl L. Griggs; "The Life of Lord Carson" (Vol. I), by Edward Marjoribanks; "Theatre and Friendship" (Henry James to Elizabeth Robins), "The Life and Letters of Sir Thomas Moore," by N. Harpsfield, edited from the MSS. by E. V. Hitchcock; Introduction by R. W. Chambers; "Mazzini," by G. O. Griffith; "Lord Cromer," by the Marquess of Zetland; "Marlborough," by Sir John Fortescue; "The Wife of Rossetti," by Violet Hunt (legendary in part); "The Life of Mary Kings-

ley," by Stephen Gwyn; "Sarah, Duchess of Marlborough," by Kathleen Campbell; "Scott's Letters," edited by H. Grierson (first of ten volumes); "Mary Wollstonecraft," by H. K. James; "Golden Horn," by Yeates Brown.

ESSAYS AND BELLES LETTRES.

"The Scientific Outlook," by Bertrand Russell; "More Lay Thoughts of a Dean," by W. R. Inge; "All is Grist," by G. K. Chesterton; "Common Sense About Poetry," by L. A. G. Strong; "Countries of the Mind," by J. Middleton Murry; "Poetry," by John Massfield; "The Golden Thread," by P. M. Buck; "Collected Essays of Robert Bridges," Nos. VI and VII.; "Portraits," by Desmond McCarthy; "Dickens," by Osbert Sitwell; "Letters of Mrs. Carlyle to Neuberger," edited by T. Scudder; "Loud and Funnier," by P. G. Wodehouse; "Johnson and Queeney," edited by the Marquis of Lansdowne; "Lost Lectures," by Maurice Baring; "Leaves from Life," by Dr. E. J. Dillon; "Four Lectures on Shakespeare," by Ellen Terry; "Honest Doubt," by Ernest J. P. Beun; "New Bearings in English Poetry," by F. E. Leavis; "Views and Reviews," by Havelock Ellis; "The Essential Shakespeare," by J. Dover Wilson; "Fiction and the Reading Public," by Mrs. A. D. Leavis; "The Facts of Fiction," by N. Colling; "Apocalypse," by D. H. Lawrence; Introduction by R. Aldington; "Science and Common Sense," by J. Langdon Davies; "Pen Portraits and Reviews," by Bernard Shaw; "Sidelights," by G. K. Chesterton; "Mr. Du Quesne and Other Essays," by J. Boreford; "The Labouring Life," by H. Williamson; "Winters of Content," by Osbert Sitwell; "The Eighteen Sixties," Essays by Fellows of the Royal Society of Literature; "The Approach to Shakespeare," by J. W. Mackail; "Variety of Ways," by Bonamy Dobree (on six Restoration writers); "Song and Its Fountains," by "A E" (George W. Russell); "The English Poetic Mind," by Charles Williams; "The Modern Woman and Herself," by Margaret Kornitzer; "Doom of Youth," by Wyndham Lewis; "Studies in Sublime Failure," by Shane Leslie; "Experimental Lives," by Muriel Jaeger; "Oxford English," by R. W. Chapman; "Lemon Verbena and Other Essays," by E. V. Lucas; "The Hogarth Letters Series," by various authors; "A Private Universe," by André Maurois; "Byron and the Need of Fatality," by Charles du Bos; "Down the Garden Path," by B. Nichols; "The Fear of Books," by Hubbrook Jackson; "Selected Essays," by T. S. Eliot; "The Great Victorians," edited by H. J. and Hugh Massingham; "Reading, Writing and Remembering," by E. V. Lucas.

FICTION.

"Mr. and Mrs. Pennington," by F. Brett Young; "Sarah Gay," by M. Borden; "The Man Who Died," by D. H. Lawrence; "Julian Probert," by Susan Ertz; "The Waves," by Virginia Woolf; "The Fortnight in September," by R. C. Sherriff; "Dawn's Left Hand," by Dorothy Richardson; "Maid in Waiting," by John Galsworthy; "Immaturity," by Bernard Shaw (act 22); "The Mother," by Naomi Royde Smith; "Without My Cloak," by Kate O'Brien; "Magnolia Street," by Louis Golding; "The Brothers," by L. A. G. Strong; "Linda Shawn," by Ethel Mannin; "Brave New World," by Aldous Huxley; "Boomerang," by Helen Simpson; "Marine Parade," by Ivor Brown; "The Fountain," by Charles Morgan; "Lady Chatter-

ley's Lover," by D. H. Lawrence; "Evensong," by Beverley Nichols; "Three Loves," by Dr. R. J. Croun; "Spears Against Us," by Cecil Roberts; "The Children's Summer," by Sheila Kaye-Smith; "Limits and Renewals," by Rudyard Kipling; "Inheritance," by Phyllis Bentley; "Lovers are Never Losers," by Jean Glono; "The Master of the House," by Radclyffe Hall; "Maid and Mistresses," by Mrs. Ken Seymour; "Royal Flush," by Margaret Irwin (the story of "Minette," sister of Charles II and "Madame" of France); "Thank Heaven Fast-ing," by E. M. Delafeld; "Little Red Horses," by G. B. Stern; "Forget-me-not," by Joseph Shearing; "Dream of Destiny," by Arnold Ronnett (his last work); "Shadows on the Rock," by Willa Cathel; "The Apes of God," by Wyndham Lewis; "Fareway," by J. B. Priestley; "The Albannach," by F. MacColla; "The Cherry Tree," by Adrian Bell; "Marriage in Heaven," by Ronald Fraser; "The Gap in the Curtain," by John Buchan; "Son of Dust," by H. M. Prescott; "Ballerina," by Lady Eleanor Smith; "Skerritt," by Liam O'Flaherty; "The Powers of Light," by Naomi Mitchelson; "The Visiting Moon," by M. R. Larnhinie; "Secret Lives," by E. F. Benson; "Hot Water," by P. G. Wodehouse; "The Brontës Went to Woolworths," by R. Ferguson; "The Fortress," by Hugh Walpole (3rd part of the Herries Saga; "Vanessa" is yet to come); "Fanfare for Tin Trumpets," by Marjery Shap; "Lament for Adonis," by E. Thompson; "Between Sun and Moon," by Mure Mackenzie; "Don Juan and the Wheelbarrow," by L. A. G. Strong; "Summers Night," by Sylvia Thompson; "Several Occasions," by Mary Butts (short stories); "Greenbanks," by Dorothy Whipple; "The House by the Way," by E. Gathorne Hardy; "The Postmaster-General," by Hilaire Belloc; "Midsummer Night Madness," by S. O. Faolain (Irish Short Stories).

SOME CRIME AND DETECTIVE STORIES.

"Police at the Funnel," by Margery Allingham; "The Sweepstake Murders," by J. J. Connington; "The Spy Net," by Ared White; "The Thirteen Problems," by Agatha Christie; "Re-enter Sir John," by Clemence Dace and H. Simpson; "The Bright Nemesis," by J. Gunther; "The Cast to Death," by N. Orde-Powlett; "Murder in the Cellar," by L. Eppley and R. Gayton; "Baxter's Second Death," by I. K. Greig; "Murder in the House of Commons," by Mrs. Hamilton, M.P.

HISTORY.

"The Persecution of Mary Stewart," by Sir Edward Parry; "The World Crisis: the Eastern Front," by Rt. Hon. Winston Churchill; "The Fifth Army," by Gen. Sir H. Gough; "The Milner Papers, S. Africa, 1897-1899," edited by Cecil Headlam; "A History of England (Vol. IV, 1255-1625)," by Hilaire Belloc; "History of the Great War" (Vol. V), France and Belgium, 1918, Sir Douglas Haig's Command to July 1, Battle of the Somme, "The Economic History of England," by E. Lipson; "The First Century of English Feudalism," by F. M. Stenton; "The Official History of the Gallipoli Campaign (Vol. II), by Brig.-Gen. C. F. Aspinall-Oglander; "The Letters of Queen Victoria" (3rd series, Vol. III), edited by G. E. Buckle; "Fifty Years," by Twenty-seven Contributors to *The Times*; "The Making of Europe," by Christopher Dawson; "The Loyal Clans," by Audry Cunningham; "The Jacobite Movement," by Sir Charles

Petrie; "Survey of International Affairs, 1939," by A. J. Toynbee; "The Dove Patrol," by Admiral Sir R. Bacon; "Eye Witness," by Gen. Sir Ernest Swinton (the History of the Tanks).

MISCELLANEOUS.

"The Cause of Cancer," by W. E. Gye and W. J. Purdy; "Sorcerers of Dorn," by R. F. Fortune; "A History of the English House," by Nathaniel Lloyd; "Authors and the Book Trade," by Frank Swinnerton; "The Bank of England from Within," by W. M. Acres; "Shades of the Prison House," by Stuart Wood; "The Proverb," by Archer Taylor; "The Riddle of Migration," by W. Rowan; "A Rabbit in the Air," by David Garnett; "Sail Planes," by C. H. L. Needham; "I Lost my Memory": The Case as the Patient Saw It, "The English Newspaper," by Stanley Morison; "A History of Capital Punishment," by J. Lawrence; "Borstallians," by J. W. Gordon; "Konkreteuth: a Medical and Psychological Study," by R. W. Hynek; "From the Bench," by Cecil Chapman; "Blecheley Diary," by Rev. W. Cole; "My Hollywood Diary," by Edgar Wallace; "Why Birds Sing," by J. Delamain; "Farmer's Glory," by A. G. Street.

POETRY AND DRAMA.

"Collected Poems," by Laurence Binyon; "Selected Poems," by L. A. G. Strong; "Parody and Dust Shot," by G. F. Bradby; "Minnie Maylow's Story," by John Masfield; "Humorous Verse": an Anthology, by E. V. Knox; "New English Verse": a Miscellany, Laetitia Abercromby; "To Themis": Poems, by Edmund Blunden; "Poems," by Geoffrey Scott; "Mourning becomes Electra," by Eugene O'Neill; "The Poems of T. Sturge Moore"; "Verses," Second book by Elizabeth Darynash; "Six Poems," by Edwin Muir; "Whips and Scorpions," collected by S. Vines (Modern Satiric Verse); "Helen I," by A. P. Herbert; "Poems," by Padraic Colum; "Armed October," by Laurence Whistler; "Poems, 1909-1935," by T. S. Eliot; "Collected Poems," by D. H. Lawrence.

POLITICS AND ECONOMICS.

"Can Governments Cure Unemployment," by Norman Angell and H. Wright; "The New Survey of London Life and Labour" (Vol II); "The Conscripton of a People," by The Duchess of Atholl; "Changes of World Economics since the War," by Dr. F. Somary; "The Pound Sterling," by A. E. Feaveryear; "The Unseen Assassin," by Norman Angell; "The Mexican Maze," by Carleton Beals; "Essays on Population," by J. A. Field; "British Trade and Industry," by G. D. H. Cole; "The Sociology of City Life," by Niles Carpenter; "Manchuria, The Cockpit of Asia," by Colonel P. T. Etherton and H. H. Tiltman; "The Work, Wealth and Happiness of Mankind," by H. G. Wells; "Canada," by Alexander Brady; "The Necessity of Communism," by J. Middleton Murry; "The English in India," by Sir John Marriott; "The World's Economic Crisis and the Way of Escape," by Sir Arthur Salter and five others; "Recent Advances in Town Planning," by T. Adams and others; "England Muddles Through," by H. E. Scarborough; "Economic Tracts for the Times," by G. D. H. Cole; "Successful Living in this Machine Age," by E. A. Flene; "The Discovery of Europe," by P. Cohen-Forthheim; "Ireland, Dupe or Heroine," by the Earl of Midleton; "Mind and Money: a Psychologist looks at the

Crisis," by J. T. McCurdy; "Money in the Melting Pot," by Hartley Withers; "An Economic History of Modern Britain," by J. H. Clapham; "Whither Islam?" edited by H. A. B. Gibb; "America Weighs her Gold," by J. H. Rogers; "In America To-day," by Mary A. Hamilton; "The Intelligent Man's Guide through World Chaos," by G. D. H. Cole.

SCIENCE AND PHILOSOPHY.

"What Dare I Think," by Julian Huxley; "Science and Common Sense," by J. Langdon Davies; "An Outline of Modern Knowledge," edited by William Rose; "Advancing Science," by Sir Oliver Lodge; "Fundamentals of Ethics," by W. M. Urban; "Scepticism and Construction," by C. A. Campbell; "Philosophy and the Sciences," by Dr. F. R. Tennant; "This Surprising World," by Gerald Heard; "The Emergence of Life," by J. B. Burke; "Light," by Archibald Wen; "Philosophical Aspects of Modern Science," by C. E. M. Joad; "What We Live by," by Canon E. nest Dimmet; "The Physical Significance of the Quantum Theory," by F. A. Lindemann; "Education and the Social Order," by Bertrand Russell.

TOPOGRAPHY, TRAVEL AND SPORT.

"Roman Britain," by R. G. Collingwood; "A Cotswold Book," by H. W. Temperley; "Thoughts upon Hare and Fox Hunting," by Peter Beckford (a fine reprint); "The Soul of Malaya," by H. Fauconier; "Highways and Byways in Gloucestershire," by E. Hutton; "Arabia Felix," by Bertram Thomas; "The Men of the Last Frontier," by Grey Owl; "Down Under," by R. W. Thompson; "Half a Century of Sport," by Sir Alfred Pease; "The Philosophy of Sport," by Dr. F. MacBride; "This England," by Edmund Blunden; "Side Lines, Side Lights and Reflections of a Chalk Stream Angler," by G. E. M. Skues; "Bath," by Edith Sitwell; "Windjammer, The Book of the Horn," by Shaw Desmond; "The Nitrate Clippers," by Basil Lubbock; "English Sport," by Captain H. F. H. Hardy; "Purely for Pleasure," by Elinor Mordaunt; "Around the World Single-handed," by Harry Pidgeon; "In Search of Wales," by H. V. Morton (whose series has now reached a sale of nearly 450,000 copies); "Raleigh's Last Voyage," by V. T. Hutton; "History of the County of Kent," Vol. III, Victoria History; "A Superficial Journey through Tokyo and Peking," by Peter Quennell; "Kamet Conquered," by F. S. Smythe; "Enchanted Sand," by H. D. Hall (Mexico); "A Detective in Sussex," by Donald Maxwell; "The Face of Eng'land," by Edmund Blunden; "Wold Without End," by H. J. Massingham (autobiographical); "The Open Air Year," *The Times*; "To Whom the Goddess," by Lady Diana Shelden and Lady Apsley; "Those Greenland Days," by Martin Lindsay.

THEOLOGY.

"The Historic Jesus in the New Testament," by R. H. Strachan; "The Church of To-morrow," by Kenneth Ingram; "Everyman's Bible," An Anthology, chosen by W. R. Inge; "Whither? A Study of Shams and Safeguards," by Edward Lytton; "Christian Outlines," by Cyril Allington; "For Sinners Only," by A. J. Russell (The Oxford Groups); "What I Owe to Christ," by C. F. Andrews (Religious autobiography); "Deuteronomy," by Adam Welch.

In the world of art the year was a period of almost unexampled depression. Artists and picture dealers alike suffered from a general want of business and in the auction rooms cases were known of pictures by eminent Eighteenth century masters which realized under the hammer only about a fourth of what was paid for them soon after the end of the War. Even worse was the fall in value of some of the works of once popular painters of the Victorian period, which, purchased from the Artists for hundreds of pounds, were knocked down for merely nominal sums. The first event of the season, and the most important, was the exhibition of French art held at Burlington House under the patronage of the King and the President of the French Republic. The exhibition, which contained 1,000 works representative of French art, ancient and modern, was most successful. It was opened on January 4 and closed on March 5 and was visited by 340,000 persons. The French General Committee was presided over by M. Paul Léon, Director-General of the Fine Arts; and Sir William Llewellyn, the President of the Royal Academy, was chairman of the British Executive Committee.

The Summer Exhibition of the Royal Academy (the one hundred and sixty-fourth) was opened on May 2 and closed on August 6. The Hanging Committee was composed of Sir E. L. Lutyens, Mr. L. C. Campbell, Mr. A. J. Olsson, Mr. L. C. Taylor, Mr. Oliver Hall, Mr. C. L. Hartwell, Mr. G. Harcourt, Mr. F. L. Griggs, Mr. S. Jagger, and Mr. Harold Knight. The works of all kinds submitted for exhibition numbered 11,706, of which 9,602 were rejected, and 2,000 made doubtful. From the doubtful works and the contributions of the Academicians and Associates the exhibition was composed, for not a single work was regarded by the Committee as worthy of being accepted outright. There is no precedent for this in all the history of the Royal Academy.

The principal works sold included "Raverbed" (£100), "The Moorhen's Nest" (£150 10s.), and "In Springtime" (£84), by Mr. Adrian Stokes; "The River Pool" (£75), "Snowclad" (£75), and "By the Lune" (£75), by Mr. R. G. Brundrit; "Girl Reading" (£100), by Mr. Harold Knight; "The Severn from the Forest of Dean" (£75), by Mr. Charles M. Gere; "The Sampler" (£400), by Mr. L. C. Taylor; "The Bridge of Gweek" (£150), "The Old Barge" (£125), and "At High Water" (£105), by Mr. Stanhope Forbes; "The Full River" (£300), by Mr. A. J. Munnings; "Old Mill House" (£100 10s.), and "Marshland on the Moorish Coast" (£78 10s.), by Mr. Oliver Hall; "The Beach" (£60), by Mr. Arnesby Brown; "Diana" (£85), and "Reflections in a Silver Ball" (£145), by Mr. H. Davis Richter; "Cagnes, France" (£700), by Sir H. Hughes-Stanton; "A Psalm to Winter Skies, Pend-vouder, Land's End" (£300), by M. Lamorna Birch; "The Family" (£300), by Mr. B. Fleetwood Walker; "Dampier joins the Buccaneers" (£200), and "Saluting the Vanquished" (£200), by Mr. J. D. McCormick; "The Staircase" (£180), by Frederick W. Elwell; "Conversation Piece. Hilaire Belloc, G. K. Chesterton and Maurice Baring" (£1,500), by Mr. H. James Gunn; "Czech Peasant Girl" (£50), by Miss Phyllis Dodd; "The Young Menage" (£150), by Mr. Harold Harvey; "A Conversation in Aragon" (£150), and "Spanish Gipsies' Winter Quarters" (£150), by Mr. W. Russell Flint; and "The

Young Bower" (£100), by Mr. L. M. Glasson. Pictures marked "sold," but unpriced, included "The Derbyshire Mill" and "Nancy," by Mr. Sydney Lee; and "The South Downs: Hikers Resting," by Mr. George Henry. No works were bought for the Chantry collection from the exhibition, but three acquired before it was opened were on view. These were, "Decomposing" (1905), by Mr. Alan Beaton, (£100), "Miss Jean Werner Laurie" (1903), by Miss Ethel Walker (£68 5s.), and "A Cotswold Farm" (1903) by Mr. Gilbert Spencer (£350).

Sir Philip Sassoon held a third successful loan exhibition at his house in Park Lane, in aid of charities, composed of furniture, pictures, plate, jewels and documents. A very interesting collection of pictures by "Some Neglected English Masters" was held in the summer in the gallery of the Burlington Fine Arts Club. Some of the artists represented were not, perhaps, altogether in the "neglected," and the identity of one of them remained a mystery in spite of all the investigation of connoisseurs and critics; the "Portrait of an Artist and his Wife," which some ascribed to Arthur Pond, a painter of whose work little is known. At the Leicester Galleries the exhibitions included recent paintings and sculpture by Mr. Glyn Philpot, R.A., drawings by Mr. Richard Sickert, A.R.A., and lithographs in colour by the French artists Bonnard and Vuillard. At Colnaghi's were portrait studies by Sir John Lavery, made for his Academy picture "Their Majesty's Court"; at Agnew's, pictures by Duncan Grant, Vanessa Bell and Keith Baynes; and at the Cotswold Gallery, watercolours and oil paintings of the English school. In May and June contemporary paintings, drawings and sculpture were on view at the French Gallery, 11 Berkeley Square; and later in the summer some surprising works by the late Charles Sims, R.A., described in the catalogue as "spirit pictures," were shown at the Redfern Gallery. At the annual exhibition of early English watercolours at Walker's Galleries in Bond Street the usual standard of excellence was maintained. Etchings and engravings by Mr. Frederick Carter, and watercolours by Mr. Adrian Bury, were shown in June at Messrs. J. Leger's gallery, a capital collection of paintings and drawings by British artists of eminence, was held in July at the Beaux Arts Gallery, Bruton Place; and busts by Roysbrach were on view at Messrs. Spink's. At the Fine Art Society's gallery in New Bond Street the most important of several exhibitions held was a collection of bronze statuettes by Sir Alfred Gilbert, R.A.

The memorial to Queen Alexandra in the garden of Marlborough House, executed by Sir Alfred, was unveiled in the summer, when he was knighted, and re-elected to membership of the Royal Academy, which he had resigned more than twenty years ago. A statue of St. Joshua Reynolds by Mr. Alfred Drury, R.A., a commission from the Royal Academy, was unveiled in the courtyard of Burlington House, and was awarded the silver medal of the Royal Society of British Sculptors, as being "the best work of the year by a British sculptor, in any way exhibited to the public in London." The Albert Medal of the Royal Society of Arts was awarded in June to Mr. Frank Brangwyn, R.A., for services to decorative and commercial art.

By the resignation of Mr. Collins Baker, a painter and a well known writer on the fine arts,

the National Gallery lost the valuable services of its Keeper, who has accepted a post at the Huntington Library and Art Gallery, San Marino, California, where Gainsborough's "Blue Boy" and Sir Joshua's "Mrs. Siddons" found a permanent home some years ago. At the National Portrait Gallery, where the extensions in progress are rapidly approaching completion, an exhibition was arranged in connection with the centenary of the death of Sir Walter Scott. It was composed of portraits of Scott himself, and of literary men, artists and others who had been more or less in his circle, in London and Edinburgh. The Gallery received some interesting additions during the year, among them a capital portrait of Thomas Day, the author of "Sandford and Merton," painted by Wright of Derby a hundred and fifty years ago and still in perfect condition.

In the sale room the season was probably the

worst of modern times. The most important sale, or at least the one that excited the greatest public interest, was held, not in London, but at Lambton Castle, Durham, the seat of the Earl of Durham, who offered for disposal many of his family pictures, including Lawrence's famous "Red Boy." For this picture, exhibited at the Royal Academy in 1825, £95,000 was bid, and at this price was withdrawn. At Christie's Sir John Ramsden's collection of furniture, bronzes, carpets, silver and pictures, realized £49,644; and another collection, formed by the late Sir Ernest Cassell, was sold at Brook House by Puttick and Simpson for £25,636. At the Chester Beatty sale of manuscripts, Sotheby's disposal of a Book of Hours for £5,000; and the same firm in June sold a Raeburn, a portrait of Helen Boyle for £3,500. A record price, £2,415 for a work by Arthur Devis, was obtained at Christie's at a sale in March.

THE YEAR'S MUSIC.

OPERA.

When, at the beginning of 1932, it was announced that Covent Garden would not reopen its doors, there was much lamentation in various musical camps. Some weeks later, however, the Syndicate decided to embark on a month's German season, two complete cycles of "Der Ring des Nibelungen" and other Wagner operas being promised. The management's curiously-worded prospectus also mentioned that ladies should "remove their bouquets," an order which suggests that the Royal Opera authorities have lost track of feminine modes for long years, the only bouquets now on view being those which adorn the thesauruses. . . . A short time elapsing between the Syndicate's decision and the opening night, May 10, it was thought (by the uninitiated) that few of the leading German singers would be available. They were to be had almost for the asking, since, the financial crisis having attacked Germany, talent seemed to be going a-begging. Consequently, each opera was advantageously cast.

An outstanding success rewarded Hofmann, a Wotan new to Covent Garden, and one whose fine style is a model which many of his compatriots might copy with great advantage. Habich, as upon former occasions, was a very satisfying Alberich; Olczewska, ever reliable, made Fricka unusually interesting; Janssen's Kurwenal long remained memorable; Wolff, a singer of rank, was all that could be desired. Melchior's Siegfried, well conceived and skilfully projected, even if he is not a complete master of style, again proved him to be the best Siegfried available, recalling, every now and then, Jean de Reszké—of blessed memory. Leider, if her voice occasionally seemed harsh, fell back on an excellent technique; Heigers' Fasolt and Hagen afforded genuine pleasure; Schorr, in "Die Walküre," often triumphed, for if his voice sometimes went a little raucous, he quickly held one's attention. Many consider that Schorr's best part is Sachs, yet as Wotan he has fine moments.

Janssen's Wolfram scarcely equalled his Kurwenal, the *cantabile* demanded by "Als du in kühnem Sange uns bestrittest," "O du mein holder Abendstern" and other portions of the role

being somewhat beyond him. De Foras was a Senta of quality, Schorr's Hollander reminded one a little of Van Rooy's. Heigers did all that is possible with Daland; Wolff endeavoured to make Erik, the nincompoop, interesting. Melchior's Tristan and Leider's Isolde, as upon former occasions, were very satisfying impersonations, while Olczewska's Brangäne greatly contributed to a highly successful performance. Praise also is due to Goodacre, Allin and Bertram, three English artists, who proved thoroughly capable as Erda, Fafner and Pogner, respectively. If all British singers who aspire to a Covent Garden engagement were equally competent, there would be more hope for a languishing cause. Unfortunately, so many aspirants have no "stage feeling," and their actual singing bears little relation to *il bel canto*, the result, perhaps, of improper teaching. Quacks, in short, abound.

Particularly welcome was a "Tannhäuser" performance which enabled Londoners to make the acquaintance of Lehmann's Elizabeth. As Sieglinde and Eva this really fine artist had delighted everyone, both as singer and actress; in "Tannhäuser" she added to her laurels—gained in many a theatre during the past dozen years. "Dich, theure Halle" and the Prayer were most impressively sung, and with beauty of tone, the perfect combination, while she exhibited a complete understanding of the character. Hofmann, as the Landgrave, reminded old *habitués* of Plancon, whose singing of the part, in pre-war days, was unequalled; Melchior's Tannhäuser was on much the same plane as Lehmann's Elizabeth, and their voices blended admirably in the duet of the second act. Lehmann also sang Eva to Wolff's satisfying Walther, Schorr, Habich and Tessman being, respectively, the Sachs, Beckmesser and David of the cast. "Der Fliegende Holländer," for some extraordinary reason, failed to draw good houses, though Schorr's Hollander was all that exacting *cognoscenti* (a few of whom still frequent the Royal Opera) could wish for. The conductors were Baibolli, Heiger and Beeham, who was referred to by a musical paper as "conductor-in-chief," a foolish distinction which doubtless annoyed his colleagues.

The Old Vic. management gave the stage version of "Elijah" which, some twenty-five years ago, was produced by Manners. The work lacks dramatic situations, though, with Sumner Austin and Joan Cross in the two most important rôles, it was well performed. At Sadler's Wells "Il Trovatore" and "Otello" (Verdi's extremes) were given in English with British singers, who, on the whole, distinguished themselves. Cox, the Marrieco and Otello of the company, is a *tenore soluto* with an unusually powerful voice, and (wise man) he refrains from the slightest forcing. Edith Cross, the Sadler's Wells *Aucuba*, giving melodrama a mas, succeeded in making the part more than usually acceptable.

SATISFACTORY INSTRUMENTALISTS.

Despite the financial crisis, a number of instrumental concerts were well attended. The Italian Trio, for example, received adequate support, the executants, Casella, Poltroncini and Bonucci, being deservedly lauded by all music critics for their accurate, thoughtful playing, and the Léner Quartet exploited its customary perfection of *ensemble*. Schnabel (whom many good judges consider the best amongst leading pianists) was heard in Schubert's posthumous "Sonata in B," which he certainly played to perfection. Stravinsky was engaged for a B.B.C. Symphony Concert, performing the solo part in his own "Concerto"; Harriet Cohen introduced Bar "Sinfonia "Concertante" for pianoforte and orchestra; Busch gave a fine performance of the Brahms "Concerto," Ravel's "Pianoforte Concerto" was deftly played by Marguerite Long at a Royal Philharmonic Society's concert, with Ravel as the most inconspicuous conductor ever seen in London. Rachmaninov gave his third "Concerto," perhaps a unique work, again showing himself to be a pianist of the first rank; Cortot tried conclusions with the "Emperor" concerto, to make one wish that he had selected Chopin—in which he excels; Lamond showed us how Tchaikovsky should be interpreted. The Kolisch Quartet was deservedly applauded for its excellent performance of Alban Berg's "Lyric" suite, inspired by modern Vienna, and most skillfully written. Later, joining forces with the International String Quartet, it gave a fine performance of the Mendelssohn "Octet." At the City String Players' welcome concert the "Serenade" (for muted strings) from the Haydn "String Quartet No. 68, Op. 3, No. 5," was included in the programme, Arensky's "Variations on a Theme by Tchaikovsky" also figuring in the scheme. Ferraro contributed Vivaldi's "G minor Violin Concerto."

The Promenade Concerts enjoyed their usual success, though much disappointment was expressed at the lack of novelties. In former days one could depend upon hearing many new compositions, some of which gained a place in each year's repertoire; of late the programmes have become a routine affair—without making for improvement. Admirers of Elgar and Vaughan Williams consider that works by these com-

posers should have been given the preference, more judicious supporters of the "Proms" found it possible to do without them. Mean while, the concerts draw good audiences; so little else matters . . .

VOCAL RECITALS.

Eleanor Marshall's singing gave the impression that, if "Le Songe" ("Iphigénie en Tauride") is a little beyond her means, she might, with thought and work, develop into a lyric soprano of value. Much the same may be said of Victoria Erskine, whose recital showed that further cultivation would not come amiss, while Montgomery Fyffe and Cuthbert Reavey, who appeared in a joint recital, could do more with the material at their command. Marguerite d'Alvarez' opulent tone, rather spoiled by mannerisms and wandering from the key, made its usual effect; Nora van Klapdorp displayed a carrying voice of appealing quality, the newcomer's *legato* suggesting that Italy has been her training-ground. Oda Slobodskaya's art was a lesson in breath-control and voice-colour; Eric Marshall did justice to Schumann's "Dichterliebe," though he rather overdid the sentiment; Julian Gardner who accompanied himself, gave the impression that he would have sung better with the assistance of a sympathetic accompanist. Florence Easton, who, years ago, denied a chance in England, her native land, migrated to America, returned for a recital, showing herself to be a more than ordinarily capable artist; George Parker, in a Hugo Wolf group, which Norman Franklin accompanied most admirably, proved himself to be a singer of quality. Elizabeth Schumann was amongst the few German artists of the first rank to have given recitals; she demonstrated how Bach ought to be sung.

Flora Collins, a soprano from America, gave "O sleep! Why dost thou leave me?" better than it has been sung in London for years; her interpretation of "Die Stadt" was equally satisfying. Marova succeeded in making Debussy welcome, and that is not easy; Percy Manchester, though over-emphatic at times, used a good voice well; Lillian Hill, evidently a beginner, should—with applied study—do better. Lillian Evanti's fresh, well-rounded voice showed to particular advantage in the *andante* from "Qui la voce," and in other things, owing partly to her much-to-be admired skill in economising the breath; Claire Croiza, as on former occasions, sometimes approached perfection. Hugh Campbell sang a mixed programme, and with pleasure to his audience; Gerhardt, if now on the down grade, exhibited much of the skill which has been hers for at least twenty-five years. There also were other vocal recitals, engineered by rascally concert agents whose motto evidently is "after your money"; one fears that the aspirants spent more than was made, for the attendance was poor. Incidentally, these singers had not progressed beyond the amateur stage—nor are they likely to go far.

THE LONDON STAGE.—The theatrical season of 1931 can only be described as varied. Seldom has a year been marked by so many short runs, several plays being withdrawn after less than a dozen performances, but on the other hand there were a number of striking successes, including a few by authors new to the stage. Tragedy was associated with one of these—*Musical Chairs*, by Ronald Mackenzie, a young and promising dramatist who was accidentally killed shortly after his comedy had established itself as a favourite at the Criterion, where a six months' run did not exhaust its popularity. An even greater success in the West End was scored by another light play, *While Parents Sleep*, by Anthony Kimmins, which claimed the longest run of the year. Mr. John van Druten, the biggest force among the newcomers to the stage, increased his reputation by two plays—*Somebody Knows*, and *Behold We Live*—each of which displayed a keen sense of stagecraft and drama; Mr. J. B. Priestley, in his first play written directly for the theatre, *Dangerous Corner*, showed an advance upon *The Good Companions*, while "C. L. Anthony," in *Service*, scored a triumph almost equal to that of *Autumn Crocus*, her first attempt. Mr. Walter Hackett twice showed his ability to fit his wife with parts and to devise amusing situations in *The Gay Adventure* and *Road House*; Mr. Ivor Novello hit the public taste with *Party*, and "Ian Hay," collaborating on this occasion with Anthony Armstrong, added *Orders Are Orders* to his amusing Service comedies. Late in the year Mr. Frederick Lonsdale in *Never Come Back* promised another success, and in *Evening* Mr. Edward Knoblock and Mr. Beverley Nichols provided an attractive adaptation from the latter's novel. It was not a good season for the established dramatists. Mr. Bernard Shaw's *Too True to be Good* failed to attract, while Sir Arthur Pinero, returning to the theatre after a long interval with *A Cold June*, added nothing to his earlier reputation. Mr. Noel Coward's historical spectacle, *Cavalcade*, was not withdrawn until over 400 performances had been given, and a few days after this moving production ended, his "one-man" revue, *Words and Music*, began what promised to be a long run. During the year the Prince of Wales opened the Shakespeare Memorial Theatre at Stratford-on-Avon in time for the Festival, while there were several Shakespearean productions in London notably a beautiful revival of *Twelfth Night*. A number of translations of striking foreign plays were given, many of them dealing directly or indirectly with the war. Among these should be mentioned *Miracle at Verdun* and *Versailles*. A play of a different character from Germany was *Children in Uniform*, which greatly impressed London. Mr. Cyril Maude made a welcome "come-back" while Sir Henry Lytton bade farewell to the West End during a season of Gilbert and Sullivan operas. Many of the old musical plays were revived, and a new spectacle, *Casanova*, scored a big success. A wonderful production of *The Miracle* was a feature of the year.

The following is a list of productions between Nov. 1, 1931, and Oct. 31, 1932:—

ADELPHI, 411 Strand, W.C.2.—(1931) Jan. 30. *Helen*, opera bouffe based on La Belle Hélène by A. P. Herbert, music by Offenbach, directed by Max Reinhardt (Messrs. George Robey, W. H.

Berry and Bruce Carfax, and Mesdames Evelyn Laye and Desirée Ellinger). Sept. 16. *Words and Music*, revue by Noel Coward (Mr. Romney Brent and Mesdames Ivy St. Heller, Joyce Barbour, Steffie Duna, Doris Hale and Nora Howard).

ALDWYCH, Aldwych, W.C.2.—(1931) March 9. *Dirty Work*, by Ben Travers (Messrs. Ralph Lynn, J. Robertson Hare and Henry Hewitt, and Mesdames Constance Carpenter, Mary Brough, and Margaretta Scott). Sept. 5. *Fifty-Fifty*, adapted by H. F. Walthy from the French of Louis Verneuil and Georges Berr (Messrs. Ralph Lynn, J. Robertson Hare, Morris Harvey, Clive Morton and Frederick Burtwell and Mesdames Winifred Shotter and Mary Brough).

WYNDHAM'S, Charing Cross Road, W.C. 2.—(1932) Feb. 9. *The Green Pack*, by Edgar Wallace (Sir Gerald du Maurier, Messrs Franklin Dvall, Alan Napier and J. H. Roberts and Mesdames Joan Maude and Jessie Winter). Sept. 6. *The Way to the Stars*, by Phillip Leaver (Messrs. Leslie Banks, Francis Lister and Ronald Simpson and Mesdames Gwen Fraungron-Davies, Maritza Hunt, Joyce Kennedy and Ann Casson). Oct. 12. *Service*, by "C. L. Anthony" (Messrs. Leslie Banks, Tracy Holmes, J. H. Roberts, Allan Jeayes and Stafford Hilliard and Mesdames Ann Todd and Joyce Kennedy).

THE STAGE SOCIETY produced at the Duchess on Nov. 9, 1932, *Bluestone Quarry*, by C. K. Munro (Messrs Lewis Casson, Michael Sherbrooke, Robert Donat and Peter Gawthorne and Miss Cherry Cottrell), at the Phoenix on Dec. 6, *The Children's Tragedy*, by Karl Schönherr, English version by St. Vincent Trounbridge (Messrs. Leslie French and Harold Reese and Miss Dorothy Gibson), at the Prince of Wales's on Feb. 7, 1932, *Juarez and Maximilian*, by Franz Werfel, English version by Ruth Laughey

(Messrs. Wilfrid Walter, Rupert Harvey and Roy Graham and Miss Norah Balfour); at the Globe on May 22, *Le Cocu Magnifique*, by Fernand Crommelynck, English version by Ivor Montagu (Messrs. George Hayes and W. E. C. Jenkins and Mesdames Peggy Ashcroft and Barbara Gott).

THE REPERTORY PLAYERS produced at the Savoy on Nov. 8, 1932, *A Hunting We Will Go*, by Phyllis Morris (Messrs. Reginald Purdell, Alan Napier and Michael Hogan); at the Savoy on Dec. 6, *The Traveller in the Dark*, by Charles Thomas (Messrs. Alan Napier and Ivan Samson and Mesdames Margaretta Scott and Margaret Webster), at the Phoenix on Jan. 10, 1932, *Below the Surface*, by J. L. F. Hunt and H. G. Stoker (Messrs. Anthony Ireland, Ivan Samson and Jack Hawkins and Mesdames Jessica Landy and Joan Henley); at the Savoy on March 13, *Security*, by Esme Wynne-Tyson (Mr. Charles Carson and Mesdames Maritza Hunt and Ann Codrington), at the Savoy on April 10, *Red Triangle*, by Val Gielgud, based upon Mary Hamilton's novel (Messrs. Richard Bird and Jack Hawkins and Miss Margaretta Scott); at the Savoy on May 8, *Common Folk*, by Cecil Duckworth (Messrs. Henry Hewitt, Cecil Parker and Deering Wells and Mesdames Renée Gadd and Amy Veness), at the Piccadilly on June 12, *Blood Royal*, by Eric Forbes Boyd (Messrs. Richard Bird and Ernest Jay); at the Phoenix on Sept. 25, *Eight Bells*, by Percy G. Mandle (Messrs. Reginald Tate and Edward Chapman and Miss Betty Hardy); at the Shaftesbury on Oct. 30, *Money for Jam*, adapted from the German by Madge and Alwyn Bolton (Messrs. George Zucco, Edward Chapman and Reginald Gardiner and Miss Renée Gadd).

THE FILMS.

FOLLOWING is a list of the principal films shown publicly in London from Nov. 1, 1931, to Oct. 31, 1932.—

ACADEMY, 165 Oxford Street, W.C. 1.—(1932) Nov. 9. *The Italian Straw Hat*. (1932) Jan. 18. *West Front*, 1918. March 7. *Kameiadschaft*, G. W. Pabst's film on a mine disaster. May 2. *Madchen in Uniform*, directed by Leontine Sagan (Dorothea Wieck). July 18. *Mutter Krausen*, by Piel Jutz. Aug. 8. *Danton* (Emil Jannings). Aug. 15. *Westfront*, 1918, G. W. Pabst's film. Sept. 19. *Diary of a Russian Revolutionist*. Sept. 26. *Madchen in Uniform*. Oct. 24. *En Att* (Swedish).

CAMBRIDGE, Cambridge Circus, W.C. 2.—(1932) June 6. *M.*, directed by Fritz Lang (Peter Lorre). July 4. *The Road to Life*, directed by Nicolai Ekk, Russian. July 25. *Der Hauptmann von Korpeneck*, German (Max Adalbert). Sept. 5. *The Guardsman*, by Ferenc Molnar. Sept. 12. *Jean de la Lune*.

CAPITOL, Haymarket, S.W. 1.—(1932) Nov. 9. *The Spider* (Edmund Lowe). Nov. 16. *Rulers of the Purple Sage*. Nov. 23. *Waterloo Bridge* (Mae Clarke). Dec. 7. *Sunshine Sue*, British (Jack Hulbert, Owen Nares and Renate Muller). (1932) Feb. 8. *Over the Hill* (James Dunn and Sally Eilers). Feb. 15. *Condemned to Death* (Arthur Wontnei, Gordon Harker and Gillian Lind).

Feb. 22. *Murder at Covent Garden* (Dennis Neilson Terry). Feb. 29. *Stepping Sisters*. March 7. *Charlie Chan's Chance* (Warner Oland). March 14. *A House Divided* (Walter Huston). March 21. *The Lost Lady* (Dorothy Mackall). March 28. *Good Night Vienna* (Jack Buchanan). May 16. *The Frightened Lady*, by Edgar Wallace, British (Emlyn Williams, Gordon Harker and Cathleen Nesbitt). May 30. *Murders in the Rue Morgue*. June 6. *Business and Pleasure* (Will Rogers). June 13. *Vanity Fair* (Conway Tearle). June 20. *Cohens and Kellys in Hollywood*. June 27. *The Mayor's Nest* (Sydney Howard). July 11. *Panama Flo* (Helen Twelveteens). July 18. *Hell's House* (Pat O'Brien). July 25. *Behind the Mask* (Jack Holt). Aug. 1. *White Face* (Norman McKinnel). Aug. 15. *The Love Contract* (Owen Nares and Winifred Shottler). Aug. 29. *Westward Passage* (Ann Harding and Lawrence Olivier). Sept. 5. *Love on Wheels*, British (Jack Hulbert, Gordon Harker and Leonora Corbett). Oct. 3. *Looking on the Bright Side* (Gracie Fields). Oct. 10. *The Lodger* (Ivor Novello, A. W. Baskcomb and Elizabeth Allan). Oct. 17. *Down to Earth* (Will Rogers). Oct. 24. *The Old Dark House* (Melvyn Douglas, Gordon Harker and Ernest Thesiger).

CARLTON, Haymarket, S.W. 1.—(1932) Nov. 15. *The Hours Between* (Clive Brook). Nov. 30. *Man of Mayfair* (Jack Buchanan and Joan Barry).

Dec. 24. *Her Majesty Love* (Marilyn Miller)
 Dec. 26. *Five Star Final* (Edward G. Robinson)
 (1932) Jan. 18. *The Cheat* (Tallulah Bankhead)
 Feb. 11. *Dr Jekyll and Mr. Hyde* (Frederic March)
 March 17. *Shanghai Express* (Marlene Dietrich, Clive Brook and Anna May Wong)
 June 9. *The Man I Killed* (Lionel Barrymore and Nancy Carroll)
 June 28. *One Hour with You* (Maurice Chevalier and Jeannette MacDonald)
 Aug. 22. *Dead and The Deep* (Charles Laughton, Gary Cooper and Tallulah Bankhead)
 Oct. 7. *Movie Crazy* (Harold Lloyd and Constance Cummings).

DOMINION, Tottenham Court Road, W. 1.—
 (1931) Dec. 26. *Palm Springs* (Eddie Cantor).
 (1932) Feb. 29. *The Age for Love* (Billie Dove)
 June 20. *Self-Made Lady* (Heather Angel)
 June 27. *Tonight or Never* (Gloria Swanson)
 Aug. 1. *Sky Devils* (Spencer Tracy and Ann Dvorak)
 Sept. 12. *Dunne Love*. Sept. 26
By Whose Hand (Ben Lyon and Barbara Weeks)
 Oct. 3. *Hollywood Speaks* (Pat O'Brien and Genevieve Tobin). Oct. 10. *Attorney for the Defence* (Edmund Lowe and Evelyn Brent).
 Oct. 24. *Men of Steel* (John Stuart and Benita Hume).

EMPIRE, Leicester Square, W. C. 1.—(1932)
 Nov. 2. *The Great Lover* (Adolphe Menjou)
 Nov. 9. *Guilty Hands* (Lionel Barrymore)
 Nov. 13. *The Guardsman* (Alfred Lunt and Lynn Fontanne). Nov. 23. *Sporting Blood* (Clark Gable). Nov. 30. *Sidewalks of New York* (Buster Keaton). Dec. 7. *Indiscreet* (Helen Hayes). Dec. 14. *Get-Rich-Quick Wallingford* (William Haines). Dec. 21. *Beau Champs* (Laurel and Hardy). Dec. 26. *The Champ* (Wallace Beery and Jackie Cooper). (1932)
 Jan. 11. *The Cuban Love Song* (Lawrence Tibbett and Lupe Velez). Jan. 18. *The Ruse of Helga* (Greta Garbo and Clark Gable). Feb. 1. *Happy Landings* (Bert Loh and Charlotte Greenwood). Feb. 8. *Private Lives*, film version of Noel Coward's play (Robert Montgomery and Norma Shearer). Feb. 22. *Emma* (Marie Dressler). March 7. *Arsene Lupin* (John and Lionel Barrymore). March 14. *Two White Arms* (Adolphe Menjou). March 21. *Hell Divers* (Wallace Beery and Clark Gable). April 11. *Lovers Courageous*, by Frederick Lonsdale (Robert Montgomery). April 18. *The Passionate Plumber* (Buster Keaton, "Schmozzle" Durante, and Polly Moran). April 25. *Mata Hari* (Greta Garbo and Ramon Navarro). May 9. *The Beast of the City* (Walter Huston and Jean Harlow). May 16. *Tarzan the Ape Man* (Johnny Weissmuller). May 30. *Polity of the Circus* (Marion Davies and Clark Gable). June 6. *Letty Lynton* (Robert Montgomery and Joan Crawford). June 20. *When a Fellow Needs a Friend* (Jackie Cooper and Chic Sale). June 27. *Scarface* (Paul Muni and Ann Dvorak). July 11. *But the Flesh is Weak*, by Ivor Novello (Robert Montgomery and Heather Thatcher). July 18. *New Morals for Old* (Robert Young and Margaret Perry). July 25. *The Wet Parade* (Walter Huston and Dorothy Jordan). Aug. 1. *The Doomed Battalion*. Aug. 8. *Two Seconds* (Edward G. Robinson). Aug. 15. *Justice for Sale* (Walter Huston). Aug. 22. *The Impossible Lover* (Ramon Navarro). Aug. 29. *Diamond Cut Diamond* (Adolphe Menjou and Benita Hume). Sept. 5. *As You Desire Me* (Greta

Garbo and Erich von Stroheim). Sept. 19. *Igloo*, an impression of Eskimo life. Sept. 26. *Speak Easily* (Buster Keaton and Schmozzle Durante). Oct. 3. *Mad Masquerade* (Lionel Barrymore). Oct. 10. *Skyscraper Souls* (Warren Williams and Maureen O'Sullivan). Oct. 17. *Pack Up Your Troubles* (Laurel and Hardy). Oct. 24. *Blondie of the Follies* (Robert Montgomery and Marion Davies).

LONDON PAVILION, Piccadilly Circus, W. 1.—
 (1931) Nov. 2. *Gipsy Blood*, British. Nov. 16. *The Perfect Lady*, British. Nov. 23. *Men Like These*, British. Dec. 7. *Manu Waters* (Lilian Hall-Davis and Arthur Margetson). (1932) Jan. 4. *Tonight's the Night*, British (Leslie Fuller). Jan. 11. *Out of the Blue* (Jessie Matthews). Feb. 8. *Laurel Lane* (James Cagney). Feb. 15. *Suicide Flat* (Bill Boyd, Robert Armstrong and James Gleason). Feb. 22. *High Pressure* (William Powell). March 7. *Woman from Monte Carlo* (Lil Dagover and Walter Huston). March 14. *Dance Team* (James Dunn and Sally Eilers). March 21. *The Missing Roubandit* (Arthur Wontner). March 28. *Monte Carlo Madness* (Nari Maritza). April 4. *Invocants of Chicago* (Henry Kendall and Bernard Nodell). April 11. *Marriage Bond* (Guy Newall and Mary Newcomb). April 18. *The Silent Voice* (George Alices and Betty Davis).

MARBLE ARCH PAVILION, Marble Arch, W. 1.—
 (1932) Jan. 4. *The Old Man*, British (Maise Guy). March 16. *Wars Hell May* 9. *A Woman Commands* (Pola Negri). May 16. *Jungle Hell*, Mr and Mrs Martin Johnson's travel film. Aug. 1. *With Cobham to Kivu*, aerial discovery film. Aug. 15. *Congorilla*, African jungle picture by Mr. and Mrs. Martin Johnson. Oct. 24. *Tempest* (Emil Jannings and Anna May).

NEW GALLERY, 123 Regent Street, W. 1.—
 (1931) Nov. 2. *Alexander Hamilton* (George Arliss). Nov. 9. *Michael and Mary*, British (Herbert Marshall and Edna Best). Nov. 30. *Devotion* (Ann Harding). Dec. 7. *Sob Sister* (James Dunn). Dec. 14. *A Gentleman of Paris* (Arthur Wontner and Phyllis Konstam). Dec. 21. *Muchaf* (Ralph Lynn and Winifred Shotton). (1932) Jan. 18. *Around the World in 80 Minutes* (Douglas Fairbanks). Feb. 8. *The Quality of Generations* (Leo Carrillo and Constance Cummings). Feb. 22. *Corsari* (Chester Morris and Allison Lloyd). Feb. 29. *Forbidden* (Adolphe Menjou). March 21. *A Night Like This*, British (Ralph Lynn, Tom Walls, Robertson Hare, Claude Hulbert, Winifred Shotton and Mary Brough). April 18. *The Silent Witness* (Lionel Atwill). April 25. *Hotel Continental*. May 2. *The Faithful Heart*, British (Edna Best and Herbert Marshall). May 23. *The Devil's Lottery* (Elissa Landi and Victor McLaglen). June 13. *The Rich are Always With Us* (Ruth Chatterton). July 11. *She Wanted a Millionaire* (Joan Bennett). July 18. *Prestige* (Adolphe Menjou and Ann Harding). July 25. *Disorderly Conduct* (Spencer Tracy and Sally Eilers). Aug. 1. *Thark*, British (Tom Walls, Ralph Lynn and Mary Brough). Sept. 12. *What Price Hollywood* (Lowell Sherman and Constance Bennett). Oct. 3. *Wedding Rehearsal*, British (Roland Young, George Grossmith and Lady Tree). Oct. 17. *Leap Year* (Tom Walls and Anne Grey). Oct. 31. *There Goes the Bride*, British (Owen Nares and Jessie Matthews).

NEW VICTORIA, Vauxhall Bridge Road, S.W. 1.—(1932) Nov. 9. *Spitfire in the Navy* (Sydney Howard). (1932) Jan. 4. *The Beloved Bachelor* (Paul Lukas). June 13. *The Silent Witness* (Lionel Atwill).

OLYMPIC Leicester Square, W.C. 1.—(1932) Jan. 12. *Frail Women*, British (Mary Newcomb, Owen Nares and Edmund Gwenn). Feb. 1. *Peach o' Reno* (Wheeler and Wolsey). Feb. 8. *The Dove* (Dolores del Río). Feb. 15. *Men of Chance* (Ricardo Cortez and Mary Astor). Feb. 22. *Men in Her Life* (Charles Bickford and Lois Moran). Feb. 29. *Ladies of the Jury* (Edna May Oliver). April 4. *The Big Timer* (Ben Lyon and Constance Cummings). April 11. *The Chinese Puzzle*, British (Leon M. Lion). April 18. *The Rise of Helga* (Greta Garbo and Clark Gable). April 25. *The Last of Mrs. Cheyne* (Norma Shearer). May 9. *Private Lives* (Norma Shearer).

PALACE, Cambridge Circus, W.C. 2.—(1932) Sept. 21. *Grand Hotel* (John Barrymore, Lionel Barrymore, Wallace Beery, Greta Garbo and Joan Crawford).

PLAZA, Piccadilly Circus, W. 1.—(1932) Nov. 9. *Secrets of a Secretary* (Herbert Marshall). Nov. 23. *Honour of the Family* (Bebe Daniels). Nov. 23. *Ladies' Man* (William Powell). Dec. 7. *The Beloved Bachelor* (Paul Lukas). Dec. 14. *Rich Man's Folly* (George Bancroft). Dec. 21. *Huckleberry Finn* (Jackie Coogan). (1932) Jan. 4. *Once a Lady* (Ruth Chatterton and Ivor Novello). Jan. 11. *His Woman* (Gary Cooper and Claudette Colbert). Jan. 18. *Services for Ladies* (Leslie Howard and George Grossmith). Feb. 1. *Ladies of the Big House* (Sylvia Stanley). Feb. 15. *Hubbard's Holiday* (Clive Brook and Juliette Compton). Feb. 22. *Lord Babs*, British (Bobby Howes and Jean Colin). Feb. 29. *No One Man* (Paul Lukas). March 7. *Murder on the Second Floor*, British (John Longden). March 14. *Women Who Play*, from Lonedale's *Spring Cleaning* (Pauline Frederick). March 21. *Aren't We All*, British (Gertrude Lawrence and Owen Nares). April 4. *Tomorrow and Tomorrow* (Ruth Chatterton and Paul Lukas). April 11. *Strangers in Love* (Frederick March). April 18. *The Wiser Sex* (Claudette Colbert). April 25. *Honourable Mr Wong* (Edward G. Robinson). May 2. *Libby Christine*, founded on Michael Arlen's novel (Corlune Griffith). May 9. *Northern Lights*, film record of the Watkins Arctic expedition. May 16. *This is the Night* (Roland Young). May 23. *The Strange Case of Clara Deane* (Wynne Gibson). May 30. *The First Mrs Frazer*, British (Henry Ainley, Dorothy Dix and Joan Barry). June 6. *Sky Brude* (Richard Ailau). June 13. *Down Our Street*, British (Nancy Price, Elizabeth Allen and Sydney Fairbrother). June 20. *The Greeks Had a Word for Them* (Ina Clare and Joan Blondell). June 27. *Sky Devils* (Spencer Tracy). July 11. *The World and the Flesh* (George Bancroft and Miriam Hopkins). July 18. *Thunder Below* (Charles Bickford and Tallulah Bankhead). Aug. 1. *Merrily We Go to—* (Adrienne Allen). Aug. 8. *Million Dollar Legs*. Aug. 15. *The Man from Yesterday* (Clive Brook and Claudette Colbert). Aug. 22. *Make Me a Star* (Stuart Erwin and Joan Blondell). Aug. 29. *Sinners in The Sun* (Chester Morris and Carole Lombard). Sept. 5. *Lady and Gent* (George Bancroft). Sept. 12.

Guilty as Charged (Victor McLaglen and Edmund Lowe). Sept. 19. *Horse Feathers* (The Marx Brothers). Oct. 3. *Men of Tomorrow*, British. Oct. 10. *Crooner* (David Manners and Ann Dvorak). Oct. 17. *The Night of June 13* (Clive Brook and Lila Lee). Oct. 24. *Blonde Venus* (Herbert Marshall and Marlene Dietrich).

POLYTECHNIC, Regent Street, W. 1.—(1932) April 23. *Krus*, played by natives in Dutch East Indies. Aug. 1. *Kamet Conquered*, a film of the Himalaya, by F. S. Smythe, leader of the British Expedition. Sept. 12. *Thro' China and Japan*.

REGAL, Marble Arch, W. 1.—(1932) Nov. 2. *The Road to Singapore* (William Powell). Nov. 9. *Men Like These*. Nov. 16. *The Star Witness* (Walter Huston). Dec. 14. *Rich and Strange*, British (Joan Barry). Dec. 28. *The Love Race* (Stanley Lupino). (1932) Jan. 11. *Street Scene*, from Elmer Rice's play (Lambert Rogers and Estelle Taylor). Feb. 1. *Strutty Dishonourable* (Paul Lukas and Sidney Fox). May 8. *Reputation* (Constance Bennett) and *Nine Till Six*, British (Louise Hampton and Jeanne de Casalis). May 23. *The Crowd Roars* (James Cagney). June 6. *Beauty and the Boss* (Marian Marsh). June 20. *Enemies of the Public* (James Cagney). June 27. *Amateur Daddy* (Warner Baxter). July 4. *Mr Bill the Conqueror* (Henry Kendall and Heather Angel). July 11. *The Trial of Yvonne Ware* (Joan Bennett). July 18. *So Big* (Barbara Stanwyck). July 25. *After Office Hours*, British, version of John van Druten's play *London Wall* (Frank Lawton, Garry Marsh and Heather Angel). Aug. 1. *Lucky Girl* (Gene Gerrard and Molly Lamont). Aug. 8. *The Love Affair* (Dorothy Mackall). Aug. 22. *The Mouthpiece* (Warren William). Aug. 29. *Indiscretions of Eve* (Lester Matthews). Sept. 5. *Dangers of the Arctic*, travel film. Sept. 12. *Winner Take All* (James Cagney). Sept. 26. *Arms and the Man*. Oct. 10. *A Successful Calamity* (George Arliss). Oct. 31. *Two Against the World* (Constance Bennett).

RIALTO, 3-4 Coventry Street, W. 1.—(1932) Feb. 15. *A Nous la Liberté*, by Rene Clair. May 9. *Il Est Châmant* (Henry Garat and Meg Lemonnier). June 13. *Runny* (Kathe von Nagy). Oct. 10. *Back to Nature*. Oct. 31. *The Blue Light* (Jeni Riefenstahl).

TIVOLI, Strand, W.C. 2.—(1932) Nov. 2. *Carnaval*, British (Matheson Lang, Dorothy Boucher and Joseph Schildkraut). Nov. 30. *The Complete Dances* (Conrad Veldt, Henry Garat and Lillian Harvey). (1932) Jan. 11. *Blue Danube* (Dorothy Boucher, Joseph Schildkraut and Brigitte Helm). Feb. 1. *Frankenstein* (Colin Clive, Boris Karloff and Mae Clarke). Feb. 22. *Tonight or Never* (Gloria Swanson). March 7. *Delicious* (Janet Gaynor and Charles Farrell). March 28. *Arrowsmuth* (Ronald Colman). May 16. *The Lost Squadron* (Dick Grace, Eric von Stroheim and Mary Astor). June 6. *Melody of Life* (Ricardo Cortez and Irene Dunne). June 27. *The Boy*, British (Jack Hulbert, Cloely Courtneidge and Winifred Shotter). Sept. 5. *Bring 'Em Back Alive*, animal picture by Frank Buck. Sept. 26. *The First Year* (Charles Farrell and Janet Gaynor). Oct. 17. *The Flag Lieutenant* (Henry Edwards and Anna Neagle). Oct. 31. *Tell Me Tonight* (Jan Klepura and Sonnie Hale).

THE events of another year in the history of British broadcasting show that the period of progress and expansion is not yet ended. Important developments of 1932 include the transfer of broadcasting headquarters from Savoy Hill to Broadcasting House, the opening of the new Scottish transmitter at Westerglen, the building of a new short-wave station for Empire broadcasts, the establishment of an Empire news service, and the introduction of short television programmes as a regular feature of broadcasting. The developments in the ordinary programmes are less striking, but there has been a welcome increase in the number of relays from foreign stations, which is quite in keeping with the B.B.C.'s motto, "Nation shall speak peace unto nation."

These changes and innovations have been accompanied by a further increase in the number of listeners. The final figures for 1932 showed the enormous increase of 918,825, bringing the total number of licences issued to 4,330,735. The greatest increase previously recorded in a single year was 455,174, less than half the 1932 figure. By August 31, 1932, the number of licences issued had risen to 4,821,436, which made it reasonably certain that the five million mark would be reached before the end of the year.

BROADCASTING HOUSE.

The new B.B.C. building in Portland Place had become one of London's architectural points of interest long before the first programme was sent out from it. The transfer from the old premises in Savoy Hill began in the autumn of 1931, but it was not until the early months of 1932 that the main body of the staff moved to the new headquarters. From March onwards both Broadcasting House and Savoy Hill were used for the transmission of programmes, and on the evening of May 14 Savoy Hill was closed down, leaving Broadcasting House as the sole headquarters of British broadcasting. Two months later, on July 7, Their Majesties the King and Queen paid a visit to Broadcasting House and made a tour of the building.

With its large entrance-hall, its twenty-two studios, including a large concert-hall and a group of ten for dramatic productions, its comprehensive ventilation system and its magnificent technical equipment, Broadcasting House is undoubtedly a worthy home for British broadcasting, but the guiding principle of the building, by which the studios are enclosed in a central tower and thereby separated from the surrounding offices, has taken away much of the informality which was a pleasant feature of Savoy Hill. Mr. James Agate has charmingly expressed the difference between the two buildings by putting himself in the position of "an old-time sailor who, having learned his job on a four-master, is now confronted with the marvel of funnels and asked where his heart lies. If he is an honest mariner he will speak the truth."

NEW STATIONS.

The rapid expansion of British broadcasting is also shown by the two new stations which were completed in 1932—the Scottish Regional station at Westerglen, near Falkirk, and the Empire Station at Daventry.

The opening of the Scottish Regional station, which began its full service in September, marks

a further stage in the B.B.C.'s plan to provide alternative programmes for as many listeners as possible. Like the corresponding stations at Brookmans Park and Salfithwaite, which enable London and Northern listeners to receive alternate programmes, the new station at Westerglen has two transmitters, working on different wave-lengths. One transmitter, with a wave-length of 376.4 metres sends out the Scottish Regional programme, which contains a considerable number of items originating in Scotland, while the other, working on 288.5 metres, transmits the National programme. The two transmitters are similar in design and power, and Scottish listeners are thus provided with a full alternative programme service. Progress has also been made with the building of a similar station near Minehead, in Somersetshire, which will transmit alternative programmes for a considerable part of Wales and the West of England.

The other station which was completed during the year was the Empire short-wave station at Daventry. Since 1927 the B.B.C. has transmitted part of its programmes from the experimental short-wave station at Chelmsford, and these transmissions have been enthusiastically received in various parts of the Empire. This service, however, was definitely experimental, and at the end of 1931 the B.B.C. decided to proceed with a comprehensive Empire Broadcasting scheme, which will enable every part of the British Commonwealth of Nations to receive a short-wave programme transmitted from England. The scheme involves the use of a number of different wave-lengths, and the old transmitter at Chelmsford was quite inadequate to the purpose. A new station, equipped with two transmitters, has been built at Daventry, and preliminary transmission tests were begun at the end of 1932. These tests are to be continued until it is possible to determine which are the best wave-lengths for serving the different parts of the Empire, and it is expected that the full Empire service will be inaugurated during 1933.

In anticipation of the opening of the new station the B.B.C. made an important addition to its short-wave transmissions during 1932. A service of Empire news bulletins was established on January 4, and the bulletins, which were broadcast each weekday at 12.30 p.m., 6.15 p.m. and midnight, sent the latest news from home and abroad to short-wave listeners overseas.

TELEVISION.

Although the day of complete television has not yet arrived, and the majority of broadcasters can still enjoy the privilege of being heard but not seen, each year sees the passing of a further milestone in television's relentless advance. In 1932 transmissions by the Baird process were made from a B.B.C. studio for the first time in the history of broadcasting, and in 1932 television programmes from Broadcasting House became a regular feature of the B.B.C.'s work. These programmes, which are given for half-an-hour on four evenings a week, began on Monday, August 22, and the "televised" performers have included singers, musicians, and vaudeville artists, as well as exponents of Ye-Yo and Jiu-Jitsu. The latest television receivers, which were to be seen at the Radio Exhibition at Olympia, mark a considerable advance on the old ones, as the image is now shown in black and white, and can be watched by several people

at a distance. Only broad effects of colour and movement can at present be televised satisfactorily, and there is still a long way to travel before the invention will be capable of universal application.

OUTSTANDING BROADCASTS.

Of all the material which was broadcast in 1932 there was no item which aroused so much interest and excitement as the verbatim reading of Mr. Neville Chamberlain's War Loan Conversion speech on the evening of June 30. This was an important occasion, for it revealed the value of broadcasting as a means of conveying important announcements to the general public with the least possible delay. Until the moment when he rose in the House of Commons on June 30 the secret of Mr. Chamberlain's announcement had been closely guarded, but special arrangements had been made for its immediate communication to the public. A few minutes after he had finished his speech the complete text was broadcast, and to mark the significance of the occasion it was read by Vice-Admiral Sir Charles Crespigny, the Controller of the B.B.C., who had recently received his knighthood in the Birthday Honours. In the following month speeches in support and explanation of the scheme were broadcast by Mr. Ramsay MacDonald, Mr. Stanley Baldwin, Lord Hailsham and Mr. George Lansbury.

The Prince of Wales, who is one of the most popular of all broadcasters, was heard in several outstanding items of the year. On January 27 his striking "call to youth," at a meeting organised by the National Council for Social Service, was relayed from the Albert Hall, London; on April 23 listeners heard his speech on the spirit of Shakespeare and England at the opening of the new Shakespeare Memorial Theatre at Stratford-on-Avon; and on August 1 the broadcast of the unveiling ceremony of the Somme Memorial at Thiepval included speeches by the Prince of Wales and M. Lebrun, the President of the French Republic.

The chief religious events of the year also figured in the broadcasting programmes. An address by the Archbishop of Canterbury, in connection with the National Day of Prayer, was relayed from Canterbury Cathedral on January 3; the Eucharistic Congress at Dublin in June was marked by broadcasts of Cardinal Lauri's opening address and the Pontifical High Mass in Phoenix Park, the speeches by the Duke of York and Dr. J. Scott Lidgett were relayed from the Uniting Conference at the Albert Hall on September 20, when Dr. Scott Lidgett read the Declaration of Union of the Methodist Churches; and the Archbishop of Canterbury was again heard at the Church of Ireland National Commemoration Service, which was held at St. Patrick's Cathedral, Armagh, on June 9.

One of the great benefits of broadcasting is that events which occur overseas can now be brought nearer to the British public than was possible before. Thousands of listeners were able to be present in spirit at the unveiling of the Somme Memorial, and thousands were able to hear the inauguration of two conferences which, though held overseas, vitally concerned the interests of Great Britain. When the World Disarmament Conference opened on February 2, the inaugural speech of Mr. Arthur Henderson, the President of the Conference, was relayed

from Geneva, and later in the year the speeches of Mr. Stanley Baldwin, Mr. R. B. Bennett and others were relayed from Ottawa at the opening of the Imperial Economic Conference. The Atlantic was no barrier to the clear reception of the speeches, and part of the ceremony, which had been recorded by the Blattnerphone, was broadcast again for the benefit of those who had not heard the original relay. British listeners were also enabled to sympathise with the French nation in the loss of two distinguished statesmen, for the funeral orations on M. Briand, the great Foreign Minister, and M. Doumer, the murdered President, were broadcast by the B.B.C. Both the orations were given by M. Tardieu.

In connexion with the transfer of broadcasting headquarters from Savoy Hill to Broadcasting House two items deserve special mention—the first transmission from Broadcasting House and the last from Savoy Hill. The first broadcast from the new headquarters took place on March 15, when Mr. Henry Hall, who had recently succeeded Mr. Jack Payne, introduced the new B.B.C. dance orchestra to the listening public. The last from Savoy Hill was the retrospective programme on May 14, entitled "The End of Savoy Hill." The greater part of the programme, which was devised by Mr. Lance Sieveking, and lasted for more than two and a half hours, was given from Broadcasting House, but the later stages were transmitted from Savoy Hill, where each studio was used for the last time and the microphones were then cut off. Although the retrospect of the early history of broadcasting was excellently done the programme encountered a good deal of adverse criticism, on the grounds that it was too long, and that after a good beginning it dwindled away into insignificance.

Among other notable broadcasts of the year were Miss Amelia Earhart's account of her flight across the Atlantic, Mr. Neville Chamberlain's speech on his Budget, the appreciations of M. Briand by Lord Cecil of Chelwood and of M. Doumer by Sir John Simon, Mr. Stanley Baldwin's talk on the Ottawa agreements, Sir Samuel Hoare's account of "India since the Round Table Conference," and Mr. Ramsay MacDonald's Empire Day broadcast. Important speeches and addresses which were relayed by the B.B.C. included those by Mr. De Valera at the opening of the League of Nations Assembly; by the Duke of York and Mr. Walter Runciman at the British Industries Fair banquet at the Mansion House; by Prince George, Mr. Winston Churchill and others at the Royal Academy banquet by Mr. Lloyd George at the National Eisteddfod of the Welsh League of Youth and at the Royal National Eisteddfod of Wales; and by the Archbishop of York at the service held at St. Peter's, Geneva, in connexion with the opening of the Disarmament Conference. In lighter vein, though many listeners will remember it for a long time, was the short message broadcast by the American film comedians, Laurel and Hardy, during their visit to Great Britain.

INTERNATIONAL PROGRAMMES.

The advance in broadcasting is being accompanied by a marked increase in the number of programmes which are originated in one country and relayed to others, and this increase was reflected in the B.B.C. programmes for 1932. In the early part of the year two concerts were relayed to British listeners from the New York

studios of the Columbia Broadcasting System, and although the first of these concerts was more notable for the excellence of the transmission than for the quality of the items the experience was an undoubted success. It led to the further experiment of a series of programme exchanges, in which the items broadcast could be heard simultaneously in Great Britain and the United States. The British contribution included talks, a production of Milton's "Comus" and one of Mr. John Watt's "Songs from the Shows" programmes; and similar talks, an adaptation of "Miles Standish" and a selection of songs and tunes from Broadway successes, were transmitted to British listeners from New York.

Contact with the United States is easy to establish, on account of the great resemblance between the English and American languages, but most of the Continental relays are still confined to the international language of music. The Salzburg Festival was again heard in the British programmes in 1932, when a concert of contemporary French music and the second act of Weber's "Oberon" were relayed, and the Munich Festival contributed an excerpt from Mozart's "Don Giovanni" which was being performed at the Residenz Theatre. Another relay from Munich was a studio version of Mozart's "Così fan tutte" which was conducted by Dr. Richard Strauss and was specially performed for British listeners, and other operas were relayed from the Berlin State Opera House and the Berlin broadcasting studios. The Continental relays of the year also included a performance of M. Gustave Charpentier's "La Vie du Poète," from the Théâtre des Champs Elysées, Paris, a concert from the Österreichische Kuraal, and a concert of folk-music from Prague.

Foreign countries returned the compliment by taking several relays from Great Britain during the Covent Garden opera season, and the symphony concert of works by British composers, which was conducted by Dr. Adrian Boult and broadcast on February 27, was relayed by Austria, Belgium, Czechoslovakia, the Netherlands, Hungary, Norway, Poland, Sweden and Switzerland.

MUSIC.

The musical relays from abroad were only a tiny fragment of the musical output of the B.B.C. during the year, and the principal honours for providing Great Britain with music must go to the B.B.C. Symphony Orchestra and Dr. Adrian Boult, the Director of Music. The symphony concerts, the Promenade concerts and the studio performances have covered a wide field of musical works, and the orchestra has maintained its high place among the orchestras of the world.

The second half of the 1931-1932 symphony concert season was notable for the first performances of Arnold Bax's "Winter Legends" and the revised version of Arthur Bliss's "A Colour Symphony." In addition to Dr. Boult and Sir Henry Wood, the conductors included Dr. Felix Weingartner, Herr Bruno Walter and M. Nikolai Malko, who conducted a concert of Russian music, and among the soloists were Stravinsky, who played the solo pianoforte part in his own "Capriccio for Pianoforte and Orchestra," Suggia, Cortot and Huberman. The foreign conductors who came to London for

these concerts were also invited to conduct the B.B.C. orchestra in a Sunday concert in the studio, and the Sunday performances were as attractive and interesting as the full symphony concerts in the Queen's Hall. The series of concerts devoted to contemporary music was continued, and in the early part of the year two were devoted to the works of Russian composers and of Bela Bartok, the Hungarian.

The summer season of Promenade concerts provided further proof of the untiring energy and talent of Sir Henry Wood, who again performed the task of rehearsing and conducting the forty-nine concerts; but the season was criticised by many listeners on the ground that it lacked novelty. One item which received its first English performance during the season was Ravel's "Pianoforte Concerto for the Left Hand," which was given in the concert broadcast on August 16. The piece was written by Ravel for Herr Paul Wittgenstein, a distinguished pianist who lost his right arm in the trenches, and it was played at the Promenade concert by Herr Wittgenstein himself.

While the B.B.C. Symphony Orchestra provided the greater part of the broadcast orchestral music, concerts were also broadcast by most of the leading orchestras throughout the country, including the Hallé, Liverpool Philharmonic, Leeds Symphony and City of Birmingham orchestras. Among important studio performances were a programme by Mr. Rutland Boughton's works, conducted by the composer; a performance of Delius's "A Village Romeo and Juliet," conducted by Sir Thomas Beecham; and vocal or instrumental recitals by Elena Gerhardt, Irene Sechiarrar, Rudolph Dolmetsch, Albert Sammons, John Coates, Peter Dawson, René Chemet and many others. The policy of providing opera for the masses was continued, and there were many operatic relays from Covent Garden and provincial theatres.

As regards the supply of lighter music the principal change of the year was the departure of Mr. Jack Payne, who had won a great reputation as a purveyor of dance music. His successor, Mr. Henry Hall, brought with him a new dance orchestra, which adequately filled the vacant place.

TALKS AND EDUCATION.

The spoken word has always taken an important part in the broadcast programme, and the many series of talks in 1932 provided their usual quota of education and entertainment, with here and there an occasional thrill. The more serious talks were contained in the scheme entitled "The Haunting World: A Broadcast Symposium," which was brought to an end in March. An effort was made in these talks to provide a comprehensive survey of the present state of the world, and among the speakers were Sir Oliver Lodge, Professor J. B. S. Haldane, Mr. Bertrand Russell and Mr. Hilaire Belloc, who gave their views on science and civilisation; Mrs. Sidney Webb, Professor W. G. S. Adams and Sir Arthur Eddington, who dealt with various problems of society and government; Professor John Macmurray and Mr. T. E. Elliot, who spoke on "The Modern Dilemma"; and Dr. O. Delisle Burns, who considered the place of leisure in modern life. Contributions were also made by Professor Henry Clay, Professor Arnold Plant, Mr. D. H. Robertson, Sir Barry Jackson, Mr. Kingsley Martin and Mr. J. E. Barton; and

the series on "Changes in Family Life," which was given by Sir William Beveridge and others, caused a good deal of comment on account of the questionnaire which was issued in connexion with the talks. The questionnaire, which was designed to elicit useful information about modern family life, was described by indignant critics as an inquisition, but the B.B.C. was able to retort that the whole affair was quite voluntary, and that no one would receive a questionnaire unless he or she asked for it.

Although the main talks in the "Changing World" symposium were brought to an end in March, a number of supplementary series were arranged for the closing months of the year. The subjects included "The Law of the Land," "Our Neighbours To-day and Yesterday," and "Our Debt to the Past." Among other series which dealt with contemporary conditions and developments were those by Mr. J. L. Hammond and Professor Arnold J. Toynbee on "Britain and the Modern World Order," and by Sir John Russell and others on "Must Britain Starve?" a survey of modern agricultural problems. The tenth and eleventh National Lectures were broadcast in January and March, Sir Frederick Hopkins discussing "Vitamins as Necessities for Life," and Professor George Gordon dealing with "The Art and Ethics of Modern Biography."

The talks of general interest included the entertaining "Rungs of the Ladder," in which such diverse personalities as Mr. J. H. Thomas, Mr. W. H. Davies, Mr. Bernard Shaw and Mr. C. B. Cochran explained, or were supposed to explain, how they had climbed to success. Mr. Shaw, as might have been expected, talked about something entirely different. Mr. Stanley Casson had a series of dialogues with distinguished artists, whom he questioned about their method of work, and many speakers took part in the conversations on varied topics, which were supposed to occur in a train, and were given under the general title, "On the go." Mr. S. P. B. Mais discussed the beauty of England in talks on "The Unknown Island," and first-hand accounts of thrilling adventures by land, sea and air were given in the "Hazard" series. Two talks by Miss Stella Benson showed that she is as witty at the microphone as she is in her novels.

In the closing months of the year Mr. Vernon Bartlett temporarily abandoned his weekly survey of foreign affairs in order to tour Europe and to broadcast at fortnightly intervals from foreign capitals. At the same time Mr. G. K. Chesterton and Mr. E. M. Forster came to the microphone as critics of new books. In the place of Mr. Desmond MacCarthy and Miss V. Sackville-West. Other autumn innovations were the institution of a daily eye-witness account or topical talk, to supplement the second general news bulletin, the provision of a short daily epilogue in prose or verse, the opening of a series of unfinished debates, and the presentation of a number of knotty problems under the title "Consider your Verdict."

The usual programme of broadcasting for schools was carried out, and during the year the Central Council for School Broadcasting was reconstituted under the chairmanship of Lord Eustace Percy, M.P. One of the new developments was a series of discussions on subjects of topical interest, in order to encourage school-children to read the newspapers. The discus-

sions were conducted by Mr. Hugh Ross Williamson, the editor of the *Bookman*, and Mr. Godfrey Liss.

There was no change in the religious policy of the B.B.C., and the Thursday evening services from St. Michael's, Chester Square, which were initiated during the period of national emergency in 1931, were continued throughout the year as a regular feature of the programme.

DRAMA.

A survey of the year's dramatic broadcasts reveals that Shakespeare and Mr. L. Du Garde Peach are the two dramatists whose plays are most frequently broadcast. The Shakespearean productions included "Othello" (with Henry Ainley, John Gielgud and Peggy Ashcroft), "As You Like It" (with Gwen Ffrangcon-Davies), "Hamlet" (with John Gielgud, Marcita Hunt and Margaretta Scott), and "Henry V," and they showed that the B.B.C. producers have considerably improved their methods of bringing Shakespeare to the microphone. Mr. Du Garde Peach is by no means a Shakespeare, but he is a clever writer who has devoted much time and thought to the technique of radio drama. His new plays, "Bread" and "Love One Another," together with the revivals of "The Path of Glory" and "The Mary Celeste," bore witness to his skill in holding the listener's interest and constructing suitable dialogues for broadcasting.

Marlowe's "Doctor Faustus" and Mr. John Drinkwater's "Midsommer Eve," which was written for broadcasting, were other notable productions of the year, and there were welcome signs that the B.B.C.'s love of the macabre is at last decreasing. Such plays as "Catastrophe" and "Rope" still supplied the listener with occasional horrors, but less sensational fare was provided by Mr. Louis Goudrich's "Ann and Harold," Mr. Philip Wade's "Oranges and Lemons," and a delightful production of Harold Brighouse's "Hobson's Choice." Other interesting plays were the German "Flags on the Matterhorn," dealing with Whynper's historic ascent; Lennox Robinson's "The Round Table," Oscar Wilde's "An Ideal Husband," Stephen King-Hall's "B. J. One" and Edward Lewis's "The Triumph of Youth," adapted from Jacob Wassermann's novel. In general the B.B.C. kept a fair balance between radio drama and adaptations of plays originally written for the stage.

The Midland Regional programmes included a number of dramatic broadcasts from the Birmingham Repertory Theatre, which is now equipped with a broadcasting studio, and the eighteenth-century "Tom Thumb the Great" was relayed from Malvern during Sir Barry Jackson's festival season. Many performances by the Abbey Players were broadcast from Belfast, and the West Regional programmes contained some ingenious programmes called "Facets," which illustrated the way in which different dramatists had approached similar subjects. The "Miscellany" programmes by C. Denis Freeman and M. H. Allen provided an attractive blend of plays, poetry and music.

LIGHT ENTERTAINMENT.

The field of light entertainment included comic opera, musical comedy, revue and vaudeville. Four outstanding productions were "Good Night, Vienna," with book and lyrics by Holt Marvell and music by George Postford, which was subsequently made into a talking

film; an adaptation of Johann Strauss's "The Gipsy Baron," for which the orchestra was conducted by Dr. Adrian Boult; "His Majesty Proclaims," a romantic operetta with a cast which included Violet Lorraine, Lady Tree, Nancie Lovat and Claude Hulbert; and the burlesque Victorian melodrama, "The Pride of the Regiment," which was later produced at a West End theatre. An adaptation of Reynaldo Hahn's "Beau Brummel," was not so successful.

Mr. Gordon McConnell maintained his high reputation as a producer of broadcast revues, and his collaboration with Mr. Christopher Stone produced the delightful series of "New Songs for Old." Mr. John Watt was responsible for a number of excellent productions, including his charming series of "Songs from the Shows," "Love in Greenwich Village," and "Postman's Knock," which he wrote in collaboration with Paul England and Claude Hulbert. Among other successful productions were Mr. Ashley Sterne's "Grand Slam," and the three programmes of Mr. Harry Pepper's concert party "The White Coons," which enabled Stanley Holloway to recount the sad history of Albert who was eaten by a lion at a Blackpool Zoo.

The vaudeville programmes continued their usual course, though they were enlivened by a number of special performances called "Music-Hall," in which an attempt was made to capture the real spirit of a music-hall. All the vaudeville

favourites were heard at one time or another during 1932, and John Tilley, George Gee and Florence Desmond were perhaps the most notable of those who came to the microphones for the first time.

SPORT.

The principal sporting events of the year were the subject of running commentaries or eyewitness accounts, and M. R. U. Lyle (racing), Mr. Howard Marshall (cricket), Mr. Bernard Darwin (golf), Mr. George F. Allison (Association football), Captain H. B. T. Wakelam (Rugby football and lawn tennis), and Mr. Lionel Secombe (boxing), were prominent members of the B.B.C.'s team of sporting critics. Mr. Allison's activities were still restricted owing to the general ban on broadcasting by the Association football authorities, but he was able to give an excellent commentary on the Cup Final. Mr. John Snagge dealt with the Boat Race very effectively, and ice hockey, Rugby League football and speedway racing were also the subject of one or more running commentaries.

No review of the year's broadcasting would be complete without a reference to the gramophone recitals of Mr. Christopher Stone and the storytelling of Mr. A. J. Alan. Mr. Stone's programmes were as popular as ever, and Mr. A. J. Alan's "An Adventure at Chislehurst" was told with his customary charm and ingenuity.

GLIDING PROGRESS IN 1932.

CONSIDERABLE progress has been made in motorless flight, both as a sport and as a development of aeronautical science, in the past year. It was obvious to everyone seriously interested in aviation that there was bound to be a certain degree of evanescence about the sudden popular "boom" which gliding enjoyed two or three years ago, when one or two German experts came over to England and created a good deal of astonishment amongst laymen by the feats they were able to perform when piloting motorless aircraft. At that time a good deal of nonsense was written concerning the immediate possibilities of gliding, and the imaginations of many people were inclined to run riot when they envisaged a few years' further progress making it possible for everyone to glide over the countryside at little effort and no expense. These optimistic prophecies were given additional encouragement by the ease with which young gliding pupils overcame the initial difficulties of keeping an "A" type glider in the air for a few seconds. It was undoubtedly the sporting side of gliding which made the greatest appeal at that time. It was hailed enthusiastically as "the sport with a thrill in it," and the gliding clubs formed all over the country to cater for the new demand found in many cases that they had queues of members anxiously waiting to taste the first joys of taking a glider into the air. In some instances the large numbers of young men who were attracted by the formation of these clubs were inclined to become something of an embarrassment, for it was seldom that a

club could start with more than one Primary type glider, which had to be hauled back to a suitable starting point after every launching, and which was often out of commission for a day or two owing to minor damage caused by awkward handling and imitation "crash" landings. Luckily a Primary type glider lands slowly and comparatively lightly, for it has no engine aboard, and its construction is such that the pilot is given considerable protection if he strikes trouble. It is a tribute to the relative safety of gliding as compared with the element of risk in powered aircraft that few serious accidents occurred then or have happened since. During the past twelve months two glider pilots have unfortunately been killed—one British and the other German—but in the former case, at least, an experimental flight under unknown conditions was being carried out. In England very few gliding clubs have had their activities interrupted by anything but minor mishaps, despite the fact that during the past two years much more advanced work has been undertaken by the majority of clubs. It is a matter for congratulation, indeed, that the British clubs realised so quickly that the gliding movement in this country would not progress very rapidly if they contented themselves with putting as many pupils as possible through the elementary stages. Fortunately, a number of responsible enthusiasts in this country carried out a good deal of useful propaganda work by emphasising the importance of Britain creating as soon as possible a nucleus of skilled pilots able to soar on the

advanced types of sail-planes with which the German experts were setting up so many records. It is in soaring, or sail-planing, that the most important developments in gliding will come about. If gliding achieves any importance in the future in a commercial relationship it will be as a result of research on these lines. So far it must be admitted that while skilled soaring pilots have covered some remarkable distances without the aid of an engine, they have only been able to do so because of their great skill in the control of a sail-plane, their advanced meteorological knowledge, and the use they have been able to make of it because of a highly-developed "air sense." It is a plain fact that while the average beginner in ordinary flying can quickly learn the essentials of controlling an aeroplane, a comparatively lengthy training and special temperamental qualifications are necessary to make a skilled sail-plane pilot. At the same time it must be realised that the difficulties in regard to this special kind of training have been greatly simplified by the research work initiated by the Germans, and since carried on successfully by many gliding clubs in England, America, and some other countries. The most important research and training work is still being carried out by the German gliding schools, which are very capably organized, and which are accomplishing work of high scientific value in this new sphere of aviation. It is probable that the German Government realises that Germany has gained a good deal of international prestige from the successful way in which research in motorless flight has been resuscitated in that country. At all events, the Government now grants a useful subsidy every year to the movement. In 1930 it amounted to £16,000. This financial assistance from official quarters enables the German gliding schools and clubs to make a very good show. They certainly use the money to the best advantage, and provide facilities whereby pupils can become skilled sail-plane pilots at small expense. It is estimated that during the past two years well over six thousand pupils have been trained in the German schools. In addition to the schools where specialised training is carried out during the greater part of the year, Germany has over four hundred ordinary gliding clubs. During the past year there has been a further expansion of the international interest in motorless flight. There has been a noteworthy gliding "boom" in France, where the Government has voted 5,000,000 frs. to develop the national movement. A number of clubs have also been formed in Italy, which has already a number of enthusiastic pilots who are doing much to foster a gliding interest in that country. Both in America and Australia a good deal of progress has already been made. In the former continent nearly two thousand gliders are in use. Pilots from countries all over the world have been trained in the German schools and are now engaged in teaching club pupils the latest sail-planing technique. The British Gliding Association, of which the Chairman is Mr. E. C. Gordon England, continues to do useful work in controlling the movement in Great Britain. It has now nearly 80 clubs under its supervision, and for the most part they are composed of enthusiasts who are keen to advance the research side of gliding while still enjoying its fascinations as a sport. It is being increasingly recognised that gliding and sail-planing are

of great value in relation to civil aviation inasmuch as they offer an attractive incentive to young people to become "air minded." Gliding is undoubtedly a valuable means of training young pilots who are afterwards able to master very quickly the control of an aeroplane. In this way the British Gliding clubs, if properly supported by the Government, should be able to do much to build up a reserve of young pilots who could rapidly qualify as ordinary aeroplane pilots if their services were required. Although a few have taken the advanced certificates, women so far have not taken a very active interest in the gliding movement. Further progress was made during 1932 in towed flight, by which a sail-plane is towed in the air by an aeroplane or by a motor-car from the ground. Further experiments in power launching by motor-car have also been carried out by various clubs. The element of risk is obviously greater than in ordinary manual launching, and power launching is now covered by strict official regulations. Good propaganda work was done during the summer by Mr. Lowe Wilde, who gave demonstrations of towed flight all over the country in connexion with Sir Alan Cobham's National Aviation Day scheme. Many hundreds of passengers were successfully initiated into the mysteries of gliding by this means, and the movement generally was thus given valuable publicity. For these demonstrations, of course, a two-seater glider of the latest design was used. It has been interesting to note how quickly a literature of gliding has been built up during the past two years. Since Messrs. L. Howard-Flanders (a member of the Council of the British Gliding Association, and the first Secretary of that body) and C. F. Carr brought out the first British book on the subject, "Gliding and Motorless Flight," two years ago, about ten notable technical works have been published in this country. Herr Robert Kronfeld, the famous German pilot, is the author of one of the latest. No sensational departures in glider construction has recently been made, but steady progress is always going on. The latest sail-planes are of great beauty, and in the hands of expert pilots give remarkable performances in long distance and course flying, and in cloud and storm soaring. The International Commission on Motorless Flight continues its valuable work in controlling the international aspects of gliding, and in carrying on constant research work of the highest technical merit. It was announced towards the end of 1932 that Herr Kronfeld would probably go to India to carry out extensive gliding experiments in relation to thermal currents in that country, where the possibilities of commercial gliding are considered to be more promising than in other parts of the world. As far as the movement in Great Britain is concerned, it can be said that, despite many handicaps, it is steadily progressing on sound lines. Suitable sites for soaring and for general experimental work are being carefully catalogued, and it is probable that within a few years training schools on German lines will have been established. Centralisation of gliding club activities around areas of outstanding suitability seems to be indicated, and there is little doubt that British gliding and sail-planing pilots will continue to take a prominent and successful part in the international competitions which the International Commission is fostering.

THE NOBEL PRIZES.

THE Nobel Prizes are awarded from the income of a fund bequeathed to trustees by the Swedish scientist Alfred Nobel, the inventor of dynamite, who died December 10, 1896, leaving a fortune of about £7,750,000. The first awards were distributed on the fifth anniversary of Nobel's death, Dec 10, 1901. The awarding authorities are the Swedish Academy of Science—(a) Physics (b) Chemistry; the Stockholm Faculty of Medicine—(c) Medicine or Physiology; the

Swedish Academy of Literature—(d) Literature; and a committee of five persons elected by the Norwegian Storting—(e) Peace. The fund is managed by a Board of Directors elected by fifteen deputies appointed by the authorities above named. The Swedish Government appoints a President of the Board of Directors. Particulars concerning conditions, &c., can be obtained from Nobelstiftelse's Styrelse, Sturegatan 14, Stockholm, Sweden.

COMPLETE LIST OF AWARDS (Value, 1931, *Kroner* 173,206)

Year	(a) PHYSICS	(b) CHEMISTRY	(c) MEDICINE OR PHYSIOLOGY	(d) LITERATURE	(e) PEACE
1902	H. A. Lorentz (P. Zeeman)	E. Fischer	Sn R. Ross, K C B	T. Mommsen	E. Ducommun. (A. Gobat)
1903	H. A. Becquerel (M & Mme. Curie)	S. A. Arrhenius	N. R. Pinner	B. Björnson	Sn W. R. Cremer.
1904	Lord Rayleigh	Sn W. Ramsay	V. Pavlov	F. Mistral (J. Echegaray)	Inst. of Int. Law. (Theodore Roosevelt.)
1905	P. Lenard	A. von Baeyer	R. Koch (R. v. Calal)	H. J. Senekowicz	Ess. von Suttner.
1906	(Prof. J. J. Thomson)	H. Moissan	(Prof. Golgi)	G. Carducci	E. T. Moneta (L. Renault)
1907	(Prof. A. A. Michelson)	E. Buchner	A. Laveran	R. Kipling	K. P. Arnoldson. (F. Bajet)
1908	G. Lippman	E. Rutherford	P. Ehrlich (E. Metchnikoff)	R. Eucken	Bu. de Constant. (M. Bernaert)
1909	(Signor Marconi) (F. Brann)	W. Ostwald	T. Kocher	S. Lagerlöf	Gene Int'l. Peace Bureau.
1910	(J. D. van der Waals)	O. Wallach	A. Kossel	P. Heyse	F. M. C. Asser. (A. H. Fried)
1911	W. Wien	Mme. Curie	A. Gullstrand	M. Maeterlinck	Finn Rost
1912	G. Dallen	(V. Grignard) (P. Sabatier)	A. Curie	G. Hauptmann	H. La Fontaine
1913	(H. Kamerlingh Onnes)	A. Werner	C. Richet	(Rabindranath Tagore)	No award.
1914	M. von Laue	Th. W. Richards	R. Batany	No award	No award
1915	W. H. Bragg	R. Willstätter	No award	Romain Rolland	No award
1916	No award	No award	No award	(V. von Heldenstam)	No award.
1917	Ch. G. Barkla	No award	No award	(K. Gjellstrup) (H. Pontoppidan)	Comité International de la Croix Rouge
1918	M. Planck	F. Haber	No award	No award	No award.
1919	J. Stark	No award	J. Bordet	C. Spitteler	Woodrow Wilson.
1920	Ch. E. Guillemin	W. Neust	A. Krogh	Knut Hamsun	Léon Bourgeois
1921	Albert Einstein	F. Soddy	No award	Anatole France	(K. H. Branting. Chr. J. Lange.
1922	Niels Bohr	I. W. Aston	(A. V. Hill) (O. Meythof)	J. Benavente	F. Nansen.
1923	R. A. Millikan	F. Pregl	(F. G. Banting) (I. J. R. Macleod)	W. B. Yeats	No award
1924	K. M. G. Siegbalm	No award	W. Einthoven	W. Rymont	No award
1925	(J. Franck) (J. Heitz)	R. Zsigmondy	No award	G. B. Shaw	(A. Chamberlain. (G. Dawes
1926	Jean Perrin	The Svedberg	J. Fibiger	Grazia Deledda	(A. Briand (G. Stresemann. (Fernand
1927	(A. H. Compton) (C. T. R. Wilson)	H. Wieland	(J. Wagner-Jauregg)	Henri Bergson	Buisson. (Ludwig Quidde. No award.
1928	O. W. Richardson	A. Windaus	C. J. H. Nolle	Sigrid Undset	No award.
1929	Duc de Broglie	(A. Harden) (Prof. von Euler)	(Sh. F. G. Hopkins) (D. Eljkmann) (Dr. Karl Landsteiner)	Thomas Mann	F. B. Kellogg.
1930	Sir C. V. Raman	Prof. H. Fischer	(Prof. Otto Walburg)	Sinclair Lewis	(Archbishop N. Boderblom.
1931	No award	(Prof. Bosch) (Prof. Bergius)	(Sir Charles Sherrington)	(Eric Axel Karl-seldt)	(Jane Addams. (N. M. Butler.
1932	Deferred	(Irving Langmuir)	(Prof. E. D. Adrian)	J. Galsworthy	Not yet awarded.

ELCHO CHALLENGE SHIELD.

The Elcho Challenge Shield was instituted in 186a. It is open to one team of 8 from England, Scotland and Ireland respectively. 25 shots each at 900, 1,000 and 1,200 yards. Highest possible score 1,800.

WINNERS SINCE 186a.

Year	Country	Mks.	Year	Country	Mks.	Year	Country	Mks.
186a	England	890	1885	England	1,574	1908	Match declared void

THE ASHBURTON SHIELD, BISLEY.

THE Ashburton Challenge Shield Competition was instituted in 1861 for teams of 8 from the Public Schools (teams of 11 from 1861-1876; teams of 8 since 1877). In 1861 and 1862 the Hay M.L. rifle was used; in 1863 the long Enfield M.L.; 1864-70 the Navy 5 groove M.L.; 1871-1884 Snider, 1885-1896 Martini-Henry; since 1897 the .303 Magazine. The present regulations are 7 shots at 200 and 500 yards; one team of 8 pupils from each of such schools as have a contingent of the Junior Division of the Officers' Training Corps. The Highest Possible score is 560.

WINNERS SINCE 1861.

L'ACADÉMIE FRANÇAISE.

THE FRENCH ACADEMY is composed of 40 members, elected for life, and is the highest of the five Academies constituting *l'Institut de France* (Secretary of the Institute, M. Robert Renier). The Academy was founded by Cardinal Richelieu in 1635 and re-organized in 1836. The special object of the Academy is the composition of a Historical Dictionary of the French Language, and its members, "The Forty Immortals," are as follows:—

Elected.	Name.	Born.	Elected.	Name.	Born.
1834	Paul Bourget	1852	1923	Henri Beaumont	1889
1837	Gabriel Hanotaux	1853	1923	Edouard Estaunié	1864
1838	Henri Emile Lavedan	1859	1923	Henri Robert	1869
1907	Maurice Donnay	1859	1924	Camille Julian	1869
1909	Raymond Poincaré	1860	1924	Georges Lecomte	1867
1909	Eugène Brieux	1858	1924	Emile Picaud	1868
1909	René Doumic	1860	1924	Albert Besnard	1849
1909	Marcel Prévost	1862	1925	A. de Caumont (Duc de la Force)	1878
1911	Henri de Regnier	1864	1925	Louis Bertrand	1866
1912	Maréchal Lyautey	1864	1925	Paul Valéry	1871
1914	Pierre de la Gorce	1846	1927	Abel Hermant	1860
1914	Henri Bergson	1859	1927	Emile Mâle	1864
1918	Louis Barthou	1862	1927	Louis Madelin	1871
1918	Alfred Baudrillard	1859	1928	Maurice Paléologue	1869
1918	Jules Cambou	1845	1929	Maréchal Pétain	1866
1919	Henri Bordeaux	1870	1930	André Chamet	1874
1920	Joseph Bédier	1864	1931	Pierre Benoit	1864
1920	Louis Chevrillon	1864	1931	Général Weyrand	1867
1922	Pierre de Nolhac	1859	1932	Abel Bonnard	1883
1922	Georges Goyau	1869			

The four other Academies are:—

ACADÉMIE DES INSCRIPTIONS ET BELLES LETTRES, founded 1663, 40 members.

ACADÉMIE DES SCIENCES, founded 1666, divided into 11 sections, each of which comprises 6 members.

ACADÉMIE DES BEAUX-ARTS, 5 sections, comprising 40 members, as follows—painting, 14 members; sculpture, 8; architecture, 8; engraving, 4; musical composition, 6.

ACADÉMIE DES SCIENCES MORALES ET POLITIQUES (for the study of questions of social and political economy), founded in 1832, 40 members, 5 sections.

All the Academies, with the exception of the Académie Française, elect a certain number of honorary members and of national foreign correspondents.

THE GRAND PRIORY IN THE BRITISH REALM OF THE VENERABLE ORDER OF THE HOSPITAL OF ST JOHN OF JERUSALEM.

(INCORPORATED BY ROYAL CHARTER)

THE Order was founded in Jerusalem in 1099 by the Blessed Gerard as an Order of Hospitaliers under the Augustinian rule. Its successor, inspired by the example of the Templars, converted it into a Military Order. On the loss of Jerusalem it migrated to Acre and from thence to Rhodes and Malta, where it formed one of the most important bulwarks against the naval power of the Moslems in the Mediterranean. Since the loss of Malta in 1798 the Order, which is International, has devoted itself to works of charity and humanity. The objects and purposes of the Order are, amongst other things, the maintenance of the St. John Ophthalmic Hospital at Jerusalem, and the St. John Ambulance Association and Brigade at Home and Overseas, and the London Light and Electrical Clinic for poor people. The Order is conferred for services in the cause of humanity throughout the Empire, and is open to both men and women. There are 5 classes: Bailiffs and Dames Grand Cross; Knights and Dames of Justice and of Grace; Commanders of both sexes; Officers of both sexes, Serving Brothers and Sisters. These distinctions are notified in the *London Gazette*, but do not confer any rank or title. The ribbon of the decorations of the Order is black (watered). *Headquarters*, St. John's Gate, Clerkenwell, E.C.2.

Sovereign Head

Grand Prior

Sub-Prior

Prelate

Bailiff of Egle

HIS MAJESTY THE KING

II R II The Duke of Connaught, K.G.

Maj.-Gen. The Earl of Scarborough, K.C.

G.B.I., K.B.T.D.

The Archbishop of Canterbury

Sir John Hewett, G.C.S.I., K.B.E., C.I.F.

EXECUTIVE OFFICERS.

Chancellor—Lt.-Gen. Sir Aylmer Hunter-Webster, K.C.B., D.S.O., M.P.

Secretary-General—Maj.-Gen. Sir Percival S. Wilkinson, K.C.M.G., C.B.

Receiver-General—Col. Francis Pixley, V.D.

Director of the Ambulance Department—Maj.-Gen. Sir Percival S. Wilkinson, K.C.M.G., C.B.

Hospitalier—Col. Sir Courtauld Thomson, K.B.E., C.B.

Almoner—Capt. A. C. Seton-Christopher

Librarian—Col. Edwin J. King, M.C., F.R.S.

Regulator—Col. J. T. Woolrich Perowne, V.D., T.D.

Genealogist—Sir Gerald W. Wollaston, Kt. Bach, M.V.O.

Chief Commissioner, St. John Ambulance Brigade at Home, Maj.-Gen. Sir John Duncan, K.C.B., C.M.G., D.S.O.

Do. Overseas, Col. James L. Sleeman, C.M.G., C.B.E., M.V.O.

CLOSE TIMES FOR GAME.

In each case the dates are inclusive.—

Black Game—Dec. 11 to Aug. 19 (Aug. 31 in Somerset, Devon, and New Forest)

***Grouse**—Dec. 11 (Dec. 10, Scotland) to Aug. 11.

***Partridge**—Feb. 2 to Aug. 31

***Pheasant**—Feb. 2 to Sept. 30

***Ptarmigan**—(Scotland only) Dec. 11 to Aug. 11.

It is also unlawful (in *England and Wales*) to kill the game marked * on a Sunday or Christmas Day.

In *England and Wales*, hares, rabbits, woodcock, snipe, quail, landrail, and heath or moor game (and the eggs of swan, wild duck, teal, and widgeon) are protected under the Game Laws, though no close-time is fixed for them by those laws. In *Scotland* the same remarks apply to deer and hares, to the first four birds, and to wild duck. The close-time for all these birds

is, under the Wild Birds Protection Acts, 1880 to 1908, from March 2 to July 21 both inclusive. Otherwise this close-time applies to all wild birds throughout Great Britain.

HUNTING AND GROUND GAME.

There is no statutory close-time for fox-hunting or rabbit shooting, nor for deer or hares, but by an Act passed in 1892 the sale of hares or leverets in Great Britain is prohibited from March 1 to July 31 inclusive under a penalty of a pound. The first Monday in November is the recognised date for the opening of the *fox-hunting* season, which continues till the following April. *Other-hunting* lasts from mid-April to mid-September. The period for *deer-hunting* or *stalking* varies from about August 12 to October 12 for stags, and from November 20 to the end of March for hinds.

SEASONABLE AND UNSEASONABLE FISH.

THE following table shows the periods when the different kinds of edible fish mostly in use are "in season" and "out of season"

The letter *p* signifies that the fish are then

in their prime or most plentiful; the letter *x* signifies that the fish may be obtained, but are not at their best; the letter *c* signifies that it is "close-time" as fixed by statute.

(a) This is for sea crayfish (or crawfish). River crayfish can be obtained in the summer and autumn. It is illegal to take fresh-water crayfish from March to June.

(b) Foreign oysters can be sold in the close season, and are to be had almost all through the year, even though they have been laid down in English beds for temporary storage.

(d) In the close season, salmon from the Netherlands, and also from certain British rivers where net fishing is permitted later in the year than usual, are largely sold.

(e) For the first six months the bulk of our London supply of shrimps comes from the Netherlands, but Dutch shrimps are far inferior to the English, which are plentiful from July to Dec.

bas autumn, 20 per cent. of the population had died, leaving four-fifths of the remainder suffering from obstinate intermittent fever of the tertian or quartan type, from enlargement of the spleen or liver, from dysentery, diarrhoea, dyspepsia, or general anæmia. The villages are described as consisting "principally of scattered groups of huts, connected by belts of trees, and mango and bamboo topes, the whole being surrounded by a dense and impenetrable jungle. In the centre, and round each clustre of huts, excavations have been made, and from the earth thus obtained the huts have been constructed. These holes, more or less extensive, become filled with water during the rains, which is allowed to stagnate during the rest of the year. They are used promiscuously for drinking, bathing and washing, and the filthier they are, the greater the attraction to them seems to be. To those who have not actually seen it, it is almost impossible to imagine the denseness of the jungle, or the number and filthiness of the tanks, wherever the latter have been most numerous, there the most fatal effects of the epidemic have been most marked."

The causes of this Hooghly fever, were therefore reported to be as follows —1 The bad sites of the villages, standing on the banks of stagnant rivers, or located near jheels or marshes. 2. The nature of the soil being always alluvial. 3. Want of cultivation of the land, on which every kind of vegetation grows and decays unchecked, and where various animal substances accumulate, decompose and putrefy under the action of heat and moisture. 4. Position and overcrowding of houses. 5 Excess of vegetation and bamboo cultivation in the immediate vicinity of the dwellings. 6. Bad water, and the condition of the tanks. 7 Absence of all attempts at drainage. 8. Position of Musalman graveyards and Hindu burning ghats in the immediate vicinity of houses. In the burning ghats carcasses half burnt in all stages of decay were common! 9 Bad food. 10 Scanty clothing. 11 Neglect of Conservancy 12. The custom of sleeping on the damp ground. 13. Fear

The measures recommended for the prevention of the disease were,—1 The removal of superabundant vegetation, and thereby the admission of light and ventilation. 2. The best tanks to be re-dug, cleaned, and others to be filled in. 3. All holes and excavations to be filled. 4 Drinking-water tanks to be separated from those used for bathing, &c. 5 Drains to be constructed and maintained clean. 6. Foul streets to be cleansed, paved and kept in

PUBLIC SCHOOLS' SCHOLARSHIPS.

**BEDFORD
MODERN
SCHOOL**

Four Entrance Exhibitions giving exemption from Tuition Fees (£20 for Boys outside Bedfordshire) are awarded by Examination in June. Ages: under 13 and under 15 on June 1st. The Boarding Fee of the School is £70. Apply to the Headmaster's Secretary.

**BISHOP'S STORT-
FORD COLLEGE,
HERTS.**

An Examination will be held on June 6th and 7th, 1933, for Open Scholarships varying from £50 to £90 per annum. Candidates must be under 14 on August 1st. Allowance is made for age. Apply to THE HEAD MASTER, THE COLLEGE, BISHOP'S STORTFORD, HERTS.

**DEAN OLOSE
SCHOOL,
OHELTHENHAM.**

An Examination will be held on 8th and 9th June, 1933, for about six Scholarships varying from £90 to £25 per annum. Exhibitions of £30 per annum are available each term for sons of clergy. Fees £126 per annum inclusive. Applications to HEAD MASTER (P. BOLTON, M.A.).

**RYDAL SCHOOL,
COLWYN BAY.**

An Examination will be held in June, when Scholarships and Exhibitions varying in value from £100 to £20 will be offered. Candidates must be under 14½ years on June 1st. There are valuable Leaving Exhibitions. Large Engineering Workshops and Biological Laboratories. Boys may take their 1st M.B. from School. Particulars and Prospectus from the HEAD MASTER, Rydal School, Colwyn Bay.

**EXETER
SCHOOL,
EXETER.**

The Entrance Scholarship Examination will be held in July. Four Scholarships (£40 to £10) may be offered. One Exhibition for sons of clergy, and another for sons of officers who have fallen in the War, are offered for competition as vacancies occur. University Endowment, £600 a year. Apply to JOHN L. ANDREWS, HEAD MASTER, EXETER SCHOOL, EXETER.

**KING'S COLLEGE
SCHOOL,
WIMBLEDON COMMON,
S.W.**

An Examination is held in June. Candidates for Senior Scholarships must be under 16, and for Junior Scholarships under 14, on May 1st. The value of the Scholarships depends upon the Standard attained, but never exceeds the amount of Tuition Fees (£39 per annum). See "Public Schools' Year Book."

FOR PUBLIC SCHOOLS AND ROYAL NAVAL COLLEGE (Boarders only).

A. S. ATHAWES, B.A.

(Late Parker Exhibitioner, Corpus Christi College, Cambridge),

and

R. F. F. TENDALL, B.A. (Honours)

(Clare College, Cambridge).

Usual Course. Special provision for young and delicate boys. Suitable premises in own grounds. Large Playing Field, Gymnasium, Miniature Rifle Range, Tennis Court, Daily Physical Drill. Domestic arrangements under the personal supervision of Mrs. and Miss ATHAWES.

Rickerby House**Carlisle, Cumberland**

PREPARATORY SCHOOL FOR THE PUBLIC SCHOOLS AND ROYAL NAVY

*Head Master—***R. A. SHEPHEARD-WALWYN, M.B.E., M.A.**

(Late House-Master of the "Probatoncis" House at Glenalmond).

Rickerby House is a solidly built family mansion in some ten acres of its own grounds on the north side of the River Eden, just outside the city boundary.

The district possesses what is probably the most equable climate in the kingdom. The house has electric light and central heating throughout. The rooms are all high and light, and the majority face west. The drainage system is modern, and has been approved by the Rural District Sanitary Inspector. The usual subjects are taught, and the methods employed aim at making it possible for each boy to progress at his own best speed, neither "cramming" the intelligent boy nor neglecting the slow one.

The use of out of school hours is as varied as possible, the usual games being played and creative hobbies being encouraged. The aim is to make games and athletics a real recreation and not a business. Riding lessons are available for boys whose parents wish it.

The domestic arrangements are under the care of Miss E. H. EVEZARD, an experienced School Matron and a Trained Hospital Nurse and Housekeeper.

Entire charge of pupils if desired.

Prospectus and Fees on application to the Head Master.

Chichester School

Chichester, Sussex

Tannachie Court School

Malvern Wells, Worcestershire.

MR. KEITH BREBNER BULLEN, M.A. (Hons.),

Caius College, Cambridge,

Assisted by a qualified Staff, prepares boys, aged 7 to 14 years, for Public Schools and the Royal Navy.

Tannachie Court School, with 16 acres of Playing Fields and Gardens, is situated on a slope sheltered by the Malvern Hills and enjoys a bracing and sunny climate.

The aim of the School is to develop each boy according to his individual ability, and by method and enthusiasm to ensure a sound preparation for later work.

Classes are small, and the backward boy is given extra help and encouragement.

The domestic arrangements are under the direct supervision of Mrs Bullen, who is assisted by a trained nurse as Matron. Entire charge can be taken of children whose parents are abroad.

All the vegetables are grown in the gardens, and fruit is abundant. The School has its own little farmyard, with poultry and pigs, a model dairy is to be installed later. Healthy appetites are encouraged, the food being varied and attractively served. Special attention is paid to young and delicate children.

Prospectus on application.

BATH, SOMERSET. Episcopal city. Pop. 68,801. 107 miles from London. 11 miles from Bristol. Means of Access—G.W. Railway, London Midland and Scottish Railway, and Somerset and Dorset Railway. Elevation—50 to 750 ft. above sea-level. Neighbourhood—Woodland, hills and diversified country. Climate—Mild, equable, varies according to elevation and aspect. Water Supply—Constant. Drainage—Modern. Soil—Oolitic limestones clays and sands. Baths—Luxuriously appointed with every scientific application known to modern balneology. Mineral Waters—Thermal springs. Temp. 120° F.

Bath, situated in a valley, and at various levels on slopes of surrounding hills, possesses an unrivalled combination of archaeological, historical, social and scenic attractions, besides the famous waters to which it owes its origin.

"HOUSES AND ESTATES," FORTT, HATT, & BILLINGS, F.A.I., Auctioneers and Estate Agents. Special list on application. Offices, 3, Burton Street. Telephone, 4258 (2 lines).

BEDFORD. C.B. Pop. 40,573. 50 miles from London. I.M. & S. Railway. A noted educational centre on the banks of the Great Ouse, with charming riverside promenade. Golf Links (18 holes).

THE PRINCIPAL HOUSE AGENTS FOR BEDFORD AND COUNTY. W. and H. PRACOCK, 8, Dame Alice Street (close to G.P.O.), Bedford. (Telephone, 2333.) The Bedford Illustrated Property Register contains Map, school fees, views and photos of Town and Schools. Post free. Weekly Sales. Auction Rooms, Dame Street. Auction Mart, Home Lane.

BEXHILL, SUSSEX M.B. Pop. 21,229. Southern Railway 71 miles from London, 5 miles from Hastings, 12 miles from Eastbourne. Aspect—South. Climate—Dry, invigorating. Water Supply—Constant. Soil—Sandy. A modern select seaside resort, with good educational facilities. 2 Golf Links. Public Park, 12½ acres. Excursions—Battle Abbey, 8 miles; Pevensey Castle, 7 miles; Hurstmonceaux Castle, 10 miles.

The rapid growth of Bexhill is to be attributed to its bracing air and sunny climate, and it has been found that the air possesses recuperative and stimulating qualities in a remarkable degree. It is one of the sunniest spots on the South Coast, fogs are practically unknown, while the soil is for the most part sandy, and dries quickly after rain.

HOUSE AND ESTATE AGENTS. STAINES & CO., 28, Devonshire Road, and Sea Road, Cooden Beach. Agents for all available furnished and unfurnished Houses to be let or sold. Special Lists, Map, and Guide gratis. Telegrams, "Property, Bexhill." Telephones, 349, and Cooden 15.

HOUSE AGENT,
ERNEST SHEATHER, F.A.I.,

12, St Leonards Road

The only local Estate Agent a native of the town.
Telephone, 351. 39 years' experience.

BOGNOR REGIS, SUSSEX I.D.C. Pop. 13,510. Southern Railway 66 miles from London. Aspect—South. Climate—Mild, dry, equable; freedom from frost and fog. Quiet family summer resort and residential town.

ROCK GARDENS HOTEL. First class. Unrivalled position on Esplanade with Private Lawn. Close West End Bandstand. Dining, Smoking Rooms and Lounge all face sea. 40 Bedrooms. Appointed A.A. Garage. Phone, Bognor Regis 500 (2 lines). Telegrams, "Gardens, Bognor." F. PULLIN, Resident Proprietor.

CANTERBURY, KENT. Seat of the Primacy of All England. Pop. 24,450. Southern Railway 55 miles from London. Aspect—S.W. Climate—Mild and dry. Water Supply—Constant and pure. Soil—Clay with gravel. Canterbury Cathedral is a monumental antiquity of world-wide interest.

ROYAL FOUNTAIN HOTEL.—A.A. The Oldest First-class Family Hotel in the City. Close to Cathedral and both Stations. Central Heating. 12 Lock-up Garages. Table d'Hôte Luncheons and Dinners daily. Running Water in Bedrooms. Telephone, 123.
F. C. LARGE, Proprietor.

CLEVEDON, SOMERSETSHIRE. U.D.C. Pop. 7,033. G.W. Railway. 133 miles from London. Elevation—To 300 feet. Aspect—S. & W. Climate—Mild and bracing according to situation. Soil—Light and porous. Pier—840 feet. A quiet, fashionable watering-place. Golf links (18 holes). Tennis, boating, fishing.

STANCLIFF BOARDING HOUSE. Charming situation, standing high, in own grounds, overlooking Bristol Channel and Welsh Hills. 5 minutes Pier and Dial Hill; 15 minutes Railway and Golf Links. Electric Light Gas Fires in some Bedrooms. Special arrangements Winter Months. Phone, 4. Telegrams: "Stancliff, Clevedon." The Misses M. G. and D. C. COTTE.

DROITWICH, WORCESTERSHIRE M.B. Pop. 4,553. L.M. & S. Railway and G.W. Railway. 126 miles from London. 19 miles from Birmingham. Climate—Mild. Neighbourhood—Undulating woodland. A health resort noted for the curative properties of its brine-laden springs.

AYRESHIRE HOUSE. Superior Boarding Establishment. Beautifully situated in Corbett Avenue. About 300 yards from St Andrew's Baths. Corridors heated during winter. Electric Light, Hot and Cold Water, and Gas or Electric Fires in Bedrooms. Nat. Tel., 37. Conducted by Miss REILLY, Proprietress.

EXETER, DEVON. Pop. 66,039. Southern Railway and G.W. Railway 172 miles from London. Location—On east bank of the Exe. Elevation—From 26 to 435 feet above sea-level. Soil—Red sandstone. This ancient city is a favourite residential town and a centre of social life and commercial enterprise. Golf links (18 holes).

MOTOR GARAGE. Petrol supply. Facilities for all kinds of repairs. Cars on Hire. Official repairers to the Royal Automobile Club since 1902. W. SHEPHERD & SON, Loughbrook Street. Telegrams, "Shepherd, Founder." Telephone, 3457. Established 1843.

HASTINGS & ST. LEONARDS, SUSSEX. C.B. Pop. 65,199. Means of Access—Southern Railway. Elevation—20 to 600 feet. Aspect—South. Climate—Sea-front under overhanging cliffs, mild, hillsides and cliff tops more bracing; valleys running inland sheltered and warm. St. Leonards, the modern extension to the west, is the principal residential and most select quarter. Two golf links (18 holes).

**HOUSE
AGENT.**

REPLANADE HOTEL. High-class Family Hotel (unlicensed), centre of Sea Front. Large Dining Hall and Lounge opening on to Lawn and Sea Promenade. Recreation Room. Open all the year. Ten minutes from new 18-hole Golf Links. 40 Bedrooms. Electric Passenger Lift. Telephone, 298. MR. and MRS. JENNER, Resident Proprietors.

HARROGATE

THE BRITISH SPA

One of the most apt descriptions ever applied to Harrogate is the "Mecca of the Ailing and the Play-ground of the Robust." Its Bathing Establishment (the Royal Baths) is most elaborately and completely equipped. There are upwards of two hundred medically trained and certificated male and female nurses. There are within a radius of fifty miles of Harrogate no less than sixty stately homes of England. Harrogate is a gem in a perfect setting and no visitor will fail to appreciate its intimate charm and delightful associations.

FERNBANK 5, ST. MARY'S AVENUE.

Comfortable Apartments, with or without Board.
2 minutes Baths and Pump Room, Valley Gardens.

12, Warwick Lane, London, E.C. 4.

MALVERN, WORCESTERSHIRE. U.D.C. 129 miles from London. Pop. 25,632. **Means of Access**—G.W. Railway and E.M. Railway. **Location**—On the slopes of the Malvern Hills, 8 miles from Worcester. **Elevation**—300 to 900 feet above sea-level. **Climate**—Dry and bracing. **Water Supply**—Pure, constant. **Drainage**—Modern. **Soil**—Gravel. **Season**—Summer and winter. **Annual Festivals**—Shakespeare Week in May; Croquet and Lawn Tennis tournaments in May and June. Malvern is an inland watering-place, important educational centre, and a pretty residential town, consisting mostly of villas standing in own grounds. The highest point of the Malvern Hills is the Worcestershire Beacon, 1,400 feet high, from the summit of which is obtained one of the most extensive panoramic views in Great Britain, embracing the Severn and Wye Valleys, the Cotswold, Mendip and Welsh hills, and in the plain below can be seen Droitwich, Worcester, Evesham, Cheltenham, Gloucester and the Bristol Channel. The Malvern Hills being a single chain, there are no lateral intervening valleys in the range. This has much to do with the dryness of the climate. The Malvern district is rich in botanical, geological, entomological and ornithological specimens. **Assembly rooms** (high-class bands and theatrical companies), public library, three clubs, tennis, bowls, croquet, golf—gentlemen's course (18 holes), ladies' course (9 holes)—hunting, boating, fishing. **Places of Interest**—Rivers Severn (4 m.), Teme (6 m.), Avon (12 m.), boating, fishing, river scenery. **Deerhurst** (17 m.)—Saxon church. **Tewkesbury Abbey** (15 m.). **Pershore Abbey** (16 m.). **Boarbury** (8 m.)—Edna Lyall's tomb. **Valley of the Wye**—by rail to Liss, and boat down river to Chepstow.

HOUSE AND ESTATE AGENTS.—Particulars of Residences and Building Land to be Let or Sold in this delightful District may be had on application to—

WORTHING

is noted for the equability
 of its climate which is
 largely due to its geo-
 graphical situation. The
 proximity of the sea and
 the shelter afforded by the
 South Downs combine to give the climate
 without extremes. The absence of hills
 enables winds to blow over without
 causing much disturbance to the benefit

from the high percentage of cloud in the air and the large amount of sunshine. A special
 Pavilion at the Pier entrance and commodious Football Ground on the Parade have been
 added to the town's many attractions. At all the year round sports in the Pavilion. There
 are facilities for sports of all kinds.

83 minutes from London by the luxurious corridor trains of the Southern Electric
 Railway. Trains every half hour

**The Ideal Residential Town 'twixt Sea and Downs.
 Unsurpassed for Sunshine and Equability of Climate.**

WHITAKER'S PEERAGE

"Whitaker's Peerage, Baronetage, Knightage and Companionage" is a companion volume to, and not less authoritative than, the ALMANACK. Introduced in 1895, it is now firmly established, and serves its public almost equally as well as its more expensive contemporaries.

HOUSE PURCHASE BY ASSURANCE

One of the first Insurance Companies to popularise House Purchase in conjunction with Life Assurance was the BRITANNIC ASSURANCE CO., LTD., who have over 10,000 contented householders on their books.

Each of these householders not only secured his house for himself, and abolished rent, but, owing to the protective Life Assurance feature in his contract, his family is assured of a home without further payment in the event of his death.

Advances up to 80% of approved value

Yearly inclusive outlay little (if at all) more than rent.

Explanatory leaflet forwarded free on application.

BRITANNIC ASSURANCE CO. LTD.

Chief Offices: Broad Street Corner, BIRMINGHAM

ANNUITIES

The Canada Life Assurance Company specialises in Life Annuities and offers the very best value and service to its clients. Its rates are exceptionally attractive and the contracts are protected by

ASSETS of £42,000,000

invested in absolutely first-class Securities. The Company is one of the strongest in the British Empire, with

**Surplus Funds and Special Reserves of
£1,678,971**

at December 31, 1931.

Full particulars can be obtained from

CANADA LIFE ASSURANCE COMPANY

(Incorporated in Canada as a Limited Liability Company).

J. R. WANDLESS, F.I.A., Manager,

2, ST. JAMES'S SQUARE, LONDON, S.W.1.

Established 1847.

BEFORE buying an Annuity Consider

Will you

- (1) be secure ?
- (2) be sure you are secure ?
- (3) obtain the best value for your money ?

THE CONFEDERATION LIFE ASSOCIATION, the old-established Annuity Office, grants annuity rates which rank among the very best obtainable, allowance is made for each month of age actually completed; contracts may be obtained under which the full return of the purchase money is guaranteed; and it possesses funds

exceeding £18,000,000 under direct Government supervision.

A man aged 65, for example, can obtain a guaranteed return on capital exceeding 10 per cent. per annum for life. The return at other ages to both male and female investors is equally generous.

Even more favourable terms are granted to those in Impaired Health.

Write to-day—stating exact date of birth - for a personal quotation, which will be sent you without obligation.

Please mention Whittaker's Almanack.

CONFEDERATION LIFE ASSOCIATION

(Incorporated in Canada in 1871 as a Limited Company),

BUSH HOUSE, ALDWYCH, LONDON, W.C. 2.

Funds Exceed £18,000,000.

THE POLICY WHICH PROTECTS

A New Idea in

FAMILY PROTECTION POLICIES

now issued by the

CLERICAL, MEDICAL and GENERAL Life Assurance Society

An illustration of this really cheap Policy will be sent on request.

MONTHLY PREMIUMS AVAILABLE

Apply to the Chief Office -

15, ST. JAMES'S SQUARE, LONDON, S.W. 1
or to any of the Society's Branches.

THE POLICY WHICH PROTECTS

Provision for Death Duties

The following are examples of reduced rates of premium for ordinary whole-life non-profit policies of £1,000:—

Age next Birthday	Annual Premium			Age next Birthday	Annual Premium		
	£	s.	d.		£	s.	d.
25	13	18	4	45	26	9	2
30	15	16	8	50	32	13	4
35	18	9	2	55	41	5	0
40	21	17	6	60	52	19	2

The sums assured may be paid wholly or partially to the Commissioners of Inland Revenue on account of death duties before the grant of probate, an arrangement which avoids the interest on the duties.

START YOUR PROSPERITY PUSH NOW

The turn of the tide is your opportunity to make the future safe for you and yours. Arrange now for a private Income for Life for your own later years—with immediate financial protection for your family.

NEW PLAN SOLVES TWO VITAL PROBLEMS

If you live to age 60

You will receive from the Sun Life Assurance Company of Canada

£300 A YEAR

for the rest of your life, or

£3,500 CASH

And if you do not live to that age, your family will receive from the Company the following:—

£350 . 0 . 0 IMMEDIATELY (This will come just when ready cash is most necessary.)

£17 . 10 . 0 A MONTH for any period up to 20 years (wife can choose the period).

FINAL CASH SUM at end of chosen period. Amount depends upon length of time monthly income has been taken.

The above Plan applies at any age and for any amount. You can arrange for a larger pension, or a smaller one, according to what you can now spare from your income. Why not write now to the Sun Life of Canada for exact figures based on your own requirements? This places you under no obligation.

CUT OUT AND POST TO-DAY.

The Fallen Income

NEW PLAN FOR A NEW PROBLEM

Offered and Guaranteed by the Leading Annuity Company

the reduction of interest rate has seriously affected the standard of living for thousands of men and women.

The Sun Life Assurance Company of Canada has evolved a Plan which more than makes good the loss of income, makes the income absolutely secure for life, and also solves the problem of dependents. The Plan provides for a

GREATLY INCREASED INCOME NOW, WITH A SUBSTANTIAL CASH AMOUNT LATER FOR DEPENDENTS

As an example of the Plan, a man age 65 can secure an annual income for life equivalent to 7% on the whole of his Capital, with a substantial cash amount guaranteed to be paid over to his dependents.

All details of the Plan may be had on application. No obligation is incurred.

Principal Charitable Bequests of the Year.

lxix

APPENDED is a list of the principal bequests for charitable purposes recorded during the year. The amount for charitable purposes is, in a considerable proportion of the cases approximate owing to the bequests including a share of the residuary estate or consisting wholly, or in part, of business interests, or of blocks of shares, &c., for which a definite value cannot be given.

Reversionary bequests, where these are absolute (usually on the ceasing of life-interests or of a period of years) are included, but contingent reversions (dependent upon failure of issue, the failure of prior trusts, or the failure to observe certain conditions, &c.) are not included, unless it is known that the reversion, though nominally contingent, is, in the events which have happened, absolute. The amounts of residuary bequests are subject to variation on the final winding-up of the estate, owing possibly to variations in the amount of duty payable (as the final figures may place an estate for duty purposes in a different category, either higher or lower, as compared with the original value submitted on obtaining the grant of probate), or to variation in the values between the date of death and the final realization of the assets.

The list records the principal bequests published during the year, not necessarily those becoming payable during the year.

The heavy fall in values during the last year, and the persistently high level of taxation upon the more well-to-do of the community has had its effect upon the amount available for charitable purposes, but despite these adverse conditions, which affect the very large estates more particularly, the appeal of charities has not been affected so severely as might have been expected.

The increase in the proportion of bequests for educational trusts for hospitals, and for "social purposes," and the relative decline in those for purely religious or sectarian purposes, which has been noted during the last few years, still continues.

Name.	Gross Value of Estate	Approx Amount	Objects
Lipton, Sir Thomas, of Southgate	£566,068	£350,000	Bequests include £100,000 (less sums given in lifetime) for benefit of poor mothers of working classes in Glasgow, residence (and £20,000) as a hostel for nurses, and other bequests include £3,000 Lipton Memorial Nurses Home, Cambuslang, and residue for endowment of infirmaries and (or for) hospitals for relief of sick and poor within the City of Glasgow and (or) Cambuslang.

NATIONAL INSTITUTE FOR THE BLIND

(Registered under the Blind Persons Act, 1920)

Helps the blind of all ages and throughout the whole country in their fight against darkness. A continual flow of donations is required to maintain the many services of the Institute, and gifts will be warmly welcomed by the Honorary Treasurers.

224, Great Portland Street, W.1

**ALEXANDRA ORPHANAGE**

Haverstock Hill, LONDON, N.W. 3.

Founded 1758.

Patrons: Their Majesties The King and Queen.

President: H.R.H. The Prince of Wales, K.G.

Treasurer (since 1897): The Rt. Hon. Lord Marshall, P.C., K.C.V.O.

The Orphanage is unsectarian, and helps fatherless and other necessitous children from all parts of the country and the Dominions, without restriction as to class or creed. Boys and girls are admitted at all ages between infancy and 11 years of age, and are cared for until 15. Their education fits them for useful positions in after-life. Opportunities occur for suitable children to have a secondary education. During the past 174 years over 7,400 have been received, 370 are now resident, and others await vacancies.

More annual subscribers are needed. £10,000 required (by voluntary donations) each year above the assured income. The balance must be raised by donations. Legacies are a useful means of helping. Please include the School in your Will. Annual Report sent on request, and the School may be visited by interested friends.

Forms of application for the admission of children and all needful information may be had of the SECRETARY, FRED J. ROBINSON, F.C.I.S., 34-40, LUDGATE HILL, LONDON, E.C. 4.

Miss SMALLWOOD'S SOCIETY FOR THE ASSISTANCE OF LADIES IN REDUCED CIRCUMSTANCES

Under Royal Patronage.

**AN URGENT
APPEAL**

LEGACIES

**" Their works do
follow them."**

There are many people who, alas, cannot give to this Society during their lifetime, but we shall be glad if they will remember that a Legacy, large or small, will be very useful and gratefully received. The need of help is greater than ever.

New Annual Subscriptions will be thankfully received.

*Please make cheques payable to Miss Smallwood's Society—
LANCASTER HOUSE, MALVERN.*

10 MILLION LEPERS IN THE WORLD ?

OF THIS NUMBER THERE ARE MORE IN THE BRITISH EMPIRE THAN IN ANY OTHER POLITICAL GROUPING. WE ARE FIGHTING LEPROSY WITH TIED HANDS.

Will you help to Free them ?

Money is needed to control the world's worst scourge. Grants to governments, missionaries and others engaged in the fight, exceeding £20,000, have already been given. Much more is needed if the Empire's million sufferers are to be adequately helped.

Donations, however small, will be gratefully received by the Hon. Treasurer

Why we need LEGACIES and BEQUESTS

THE need of ex-Servicemen, including the disabled and their dependants, and the care of those left behind by men who fell in action, are an ever present and recurring charge on the Nation. Its work in these directions is dependent upon the sale of Poppies—a slender support for so great a work that must go on indefinitely. Every year since the inception of the Fund the expenditure has increased, and it is vitally necessary that the Fund should be strengthened and fortified against any possible diminution of income in the future by means of Legacies and Bequests.

EARL HAIG'S BRITISH LEGION APPEAL FUND

Full particulars and forms of Request can be obtained from the Organising Secretary.

Capt. W. G. WILLCOX, M.B.E., Haig House, 26, Eccleston Square, London, S.W. 1.

The Cry of the SICK CHILD

HELP is desperately needed by the

EAST LONDON HOSPITAL FOR CHILDREN

GENERAL LYING-IN HOSPITAL,

York Road, Lambeth, S.E. 1.

ESTABLISHED 1765.

Patron—H.M. The Queen.

This Hospital is situated in one of the poorest parts of London, in the district South of the Thames, with a population of nearly two millions.

Married women in indigent circumstances, especially the wives of Soldiers and Sailors, and certain single women (with their first child, after investigation by the Committee), are admitted to the Hospital from all parts of the kingdom, but mainly from the immediate neighbourhood, from which, owing to its poverty, little pecuniary help is obtainable.

Subscriptions and Donations thankfully received by the Treasurer, or Miss LILY HEARN, the Secretary, at the Hospital. [146]

THE GORDON BOYS' HOME

(THE NATIONAL MEMORIAL TO GENERAL GORDON).

Patron—THE KING

Vice-Patron—H.M. THE QUEEN

Chairman Executive Committee—H.R.H. THE DUKE OF YORK, K.G.

THE HOME IS SITUATED AT WEST END, WOKING, between BAGSHOT and BISLEY.

The Home is constructed to accommodate 250 Boys, chosen from the necessitous classes between the ages of about 14 and 15, and give them a training, up to the age of 17 or thereabouts, which will fit them alike for civil life in this country or its Colonies, and for service in the Army, Navy, Air Force or Mercantile Marine.

Conditions of Admission.—1 The age for admission is from about 14 to 15 years. 2 A boy must, in the opinion of the Committee, be really necessitous. 3 He must be free from such physical or mental infirmity as would disqualify him for service in the Army or Navy, or for civil employment in the Colonies or elsewhere, which would require active bodily exertion. 4 Boys of known bad character are ineligible.

Free admission is given to such number of boys as above can be provided for out of the general income of the Home. A guaranteed payment of £75 annually during his stay at the Home will give a right of nomination for a lad fulfilling the conditions of admission. Subscriptions and Donations are urgently needed in order that the above number of boys may be maintained.

Subscriptions are received by THE WESTMINSTER BANK, LIMITED, 1 St. James's Square, S.W., and by the Commandant at the Home from whom any further information can be obtained. For financial reasons the London Office has been abolished.

COMMANDANT—LIEUT. COLONEL H. C. HERBERT, O.B.E.

THE HOSPITAL FOR DISEASES OF THE SKIN

70-71, BLACKFRIARS ROAD, S.E.

Telephone. Hop. 1021.

ESTABLISHED 1841.

Treasurer—THE RT. HON. THE LORD MORRIS, P.C., K.C.M.G.

This Hospital, established in 1841, was the first and for many years the only one of its kind established in the United Kingdom. Donations and Subscriptions are urgently desired in order to re-open its beds for In-patients. Since its foundation no less than 610,000 patients have been treated, and the scientific equipment of the Institution has always been kept thoroughly abreast of modern developments in research and treatment. The Light Department is provided with X-rays, radium and ultra-violet light apparatus. It is a centre both of dermatological therapeutics and education, and welcomes at its clinics medical practitioners and students. Patients should attend daily at 1.30 p.m., or on Fridays at 6 p.m. They are expected to contribute to the funds of the hospital according to their means and position.

FREDERICK HAYTER, Secretary. [149]

GUY'S HOSPITAL

LONDON BRIDGE, S.E. 1,

URGENTLY NEEDS HELP.

President: H.R.H. THE PRINCE OF WALES, K.G.

Founded in 1725 by Thomas Guy, a Bookseller and Publisher in the City of London, Incorporated and Governed by Acts of Parliament, 11th George 1st, ch. xii., and 51st Victoria, ch. vi., as "The President and Governors of the Hospital founded at the sole costs and charges of Thomas Guy, Esquire."

The Hospital is empowered to receive gifts of, and to hold, land up to an aggregate yearly value of Sixty Thousand Pounds (exclusive of the site of the Hospital), notwithstanding the provisions of the Mortmain Acts.

BEDS

648

IN-PATIENTS (1931)

12,068

OUT-PATIENTS (1931)

122,867

Expenditure: £192,138 :: Income from Endowments: £68,910

The Governors earnestly appeal for further Subscriptions and Donations. The present Subscription List is only about £8,000 a year, although the Charity is dependent upon support from sources other than its endowments to the extent of over **£120,000 per annum.**

To form a permanent Memorial, if desired, a Donation or Bequest should be allocated to the Re-endowment Fund, which is permanently invested and the income only applied for the general purposes of the Hospital.

A Gift of £1,000 to this Fund, or an Annual Subscription of £50, will respectively endow or support a Bed, over which a brass tablet, inscribed in accordance with the wishes of the Benefactor, can be placed.

A copy of the Annual Report of the Hospital can be obtained on application to Mr. W. J. Curry, Clerk to the Governors, Guy's Hospital, S.E. 1. Telephone: Hop 1086.

Bankers: THE BANK OF ENGLAND.

Treasurer: F. P. WHITBREAD, Esq.

Imperial Cancer Research Fund.

Patron—HIS MOST GRACIOUS MAJESTY THE KING.

President—His Grace the Duke of Bedford.

Hon. Treasurers { Sir George Makins, G.C.M.G., C.B.
Sir Percy Sargent, C.M.G., D.S.O.

Director—Dr. J. A. Murray, F.R.S.

The object of the Research is for the good, not only of the whole British Empire but of the whole world. The scope of the work embraces detailed investigation of Cancer in every part of the Empire as it occurs in the human race and in the vertebrate animal kingdom. Our recent researches have undoubtedly advanced our knowledge of Cancer, and it is not too much to hope that the further prosecution of the investigations will ultimately yield results of the greatest importance on the nature and treatment of the disease.

Donations and Subscriptions may be sent to the Hon. Treasurers, Imperial Cancer Research Fund, 8, Queen Square, London, W.C. 1, or may be paid to the Westminster Bank, Marylebone Branch, 1, Stratford Place, London, W. 1. A/c, Imperial Cancer Research Fund.

FORM OF BEQUEST.

I hereby bequeath the sum of £
to the Treasurers of the Imperial Cancer Research Fund under the direction of the Royal College of Physicians of London and the Royal College of Surgeons of England, 8/11, Queen Square, London, W.C. 1, for the purpose of Scientific Research, and I direct that their receipt shall be a good discharge for such legacy.

The Deaf and Dumb and the Deafened THE NATIONAL INSTITUTE FOR THE DEAF

(President LORD CHARNWOOD)

URGENTLY NEEDS SUPPORT.

Its objects are to promote the prevention of deafness, the suitable education of deaf children, the industrial preparation of deaf youths and girls, the social and industrial care of deaf adults, the higher education and technical training of the deaf, and all that concerns the welfare of the entire class of the deaf.

Funds are needed for the Institute's Home for Deaf and Dumb Women; Hostel for Working Deaf Boys, Centre of Instruction in Lip-reading; and to establish provision for the Higher Education of the Deaf.

LEGACIES are specially invited. Subscriptions and Donations should be sent to the Secretary, Mr. A. J. Story, 2, Bloomsbury Street, London, W.C.1, who will be glad to supply any information required.

A GOOD INVESTMENT

Could there be any better investment than in giving to unfortunate children a real chance in life?

To thousands of little ones who were in dark and difficult places The National Children's Home and Orphanage is bringing new life, new hope and new opportunities.

It is costly work, but well worth while.

Your gift would be invested in human welfare which yields surprising returns.

SEND IT TO-DAY.

The Association grants Annuities to Gentlefolk of both sexes, such as Clergymen, Officers of the Navy and Army, Ministers, Solicitors, Landowners and Gentlemen Farmers, Doctors, and their families, and others of similar social standing. Applicants must be over 40, of sound mind, unable, through age or bodily infirmity, to earn a livelihood, and not in receipt of an income exceeding £65 a year. Since its foundation in 1863, the Association has granted annuities to 6,166 persons, of whom 2,680 are now living. The last list of accepted Candidates for annuities contained the names of over 465 persons, many of whom were certified to be without any income at all. Permanent Memorial Annuities can be founded, to which, under certain conditions, the Founders can retain for life the right of nomination. The cost can be ascertained from the Secretary.

ANNUAL SUBSCRIPTIONS, DONATIONS AND LEGACIES are Earnestly Solicited to provide annuities for the waiting Candidates, and to augment the Annuities.
